**Re: Paardekloof EMP 10277**

Speedway Contractors CC, is in the process of completing the requirements for a prospecting right for iron ore and manganese on the farm Paardekloof 482, located in the Northern Cape, South Africa.

Due to the prohibitive cost of an HIA-Phase 1, and then there still being no certainty on whether the right will even be awarded, Speedway requests that they be permitted to conduct an archeological desktop study of the property in the interim. The completion and submission of a full HIA-Phase 1 report could possibly be included as a suspensive condition to awarding the prospecting right.

The prospecting plan for Paardekloof is initially field mapping, with the drilling of 6-8 holes in the first year of prospecting. A maximum number of 60 holes will be drilled on the property over the prospecting period due to the large extent of the farm.

If SAHRA is willing to agree to this concession then EcoPartners has commissioned Anton Pelsler, a certified archaeologist to conduct a desktop study on the farm Paardekloof 482. Mr. Pelsler has done a significant amount of work in the Postmasburg area and will bring his expert knowledge of this area into the project.

I hope that you find the above in order and I await your response.
