The Mpumalanga Tourism and Parks Agency have the following concern, the Terrestrial biodiversity of the farm are Highly significant. See attached map from the Mpumalanga Biodiversity Conservation Plan (C-plan).

Highly significant/Important & Necessary areas are those where biodiversity has been heavily compromised and very few options remain to meet biodiversity targets. Natural vegetation cover in these areas should be maintained or restored. (Lötter M.C. & Ferrar A.A., 2006).

Decision on land use changes will require a biodiversity specialist study as part of the EIA.

Subject: 110613 2910 Mooiplaats West Mast - 17/2/3/GS-35

Good morning Vaino,

Thank you for your concern.

We wish to provide a clearer picture to you regarding the proposed activity and the immediate environment.

We acknowledge that this area's terrestrial biodiversity is labelled as Highly significant according to the Mpumalanga C-Plan and we therefore applied for environmental authorisation, due to the activity being listed when occurring in a Highly significant area.

The footprint of the base station of the mast is only 144 square metres. The area on which the mast and base station will be established is already disturbed and very little natural vegetation occurs on and around the site. The site is also located in between gravel roads and maize fields, with a colliery close to the site. Please refer to the photographs attached.

We therefore are of the opinion that there is no need for a biodiversity specialist study as the telecommunication mast is not a land use change i.e. no rezoning application is required, only the building plans need to be approved by the local council.

Please do not hesitate to contact us should you have any further comments or concerns.

Kind regards,

Monica Niehof

Communication structure,

Day and night markings apply to all structures exceeding 45m above the ground in South Africa by default (refer SA-CAR Part 139.01.33),

Paint markings (Day markings) shall be in compliance with ICAO Annex 14 chapter 6 and shall consist of seven painted bands, each one seventh of the length of the structure, and shall consist of bands of International Orange (or Post Office red) alternated by brilliant white, starting and ending in orange/red, to a maximum length of 30 meters per band (i.e. a 210m mast). Thereafter it becomes 9 bands, each one ninth of the length of the mast up to 270m, 11 bands up to 330m etc.

Lights (Night marking) to be used shall consist of a pair of steady burning approved red aeronautical obstruction lights of at least 32 candela each at the highest practical point of the structure. This may be substituted by a medium intensity Type B flashing red light (20 – 60 flashes per minute), of 2000 candela ($\pm 25\%$) intensity in accordance with ICAO Annex 14 table 6-3.

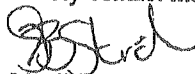

Intermediate lights shall be placed at a position midway between the top of the structure and the ground and shall consist of at least three steady burning red aeronautical obstruction lights of at least 32 candela each, on the same vertical plane and spaced not more than 120 degree horizontally. At least two lights shall be visible through any azimuth of 360 degree and no light shall be spaced more than 30m apart, on the horizontal plane of any structure. Multiple lights may be required to satisfy this requirement. The vertical spacing of lights shall be as far as practical be evenly spaced and shall not exceed 45m between vertical levels.

Board Members: Mr O Moorosi (Chairman), Mr J Morrison, Ms M Magasa, Ms B Mohlala, Maj Gen T Ntsibande, Mr Z Myeza (CEO)

Note.

Structures of 45 to 90m heights shall have dual lights on top and not less than a set of three lights at the intermediate level.

Kindly contact the writer if more information is required.
