1 INTRODUCTION

1.1 Background to the Project

Sebilo Resources (Pty) Ltd (Sebilo) submitted an application for manganese mining right on the farm Perth 276 in the Kuruman District to the Northern Cape Department of Mineral Resources (DMR). The application was accepted by the DMR on 11 November 2011 (reference number NC NC 30/5/1/2/2/10004MR).

The Mineral and Petroleum Resources Development Act (MPRDA) clearly states that every person (or company, in this case) who applies for a mining right must submit an environmental management programme (EMP), which entails that an environmental impact assessment (EIA) has to be conducted. Preparing an environmental management programme entails inter alia the investigation, assessment and evaluation of the impact of the proposed mining operations on the socio-economic conditions of any person who might be directly affected by the mining operation.

A Socio-economic Impact Assessment accepts that social, economic and biophysical impacts are inherently and inextricably interconnected. The main objectives of this study are to define the socio-economic status quo of the affected area and to identify and assess probable socio-economic impacts of the proposed new mining operation.

1.2 Description of the Proposed Project

The proposed Perth Mining Operation (the Perth Project) is situated on the remaining extent of the farm Perth 276, in the John Taolo Gaetsewe (JTG) District Municipality (previously known as the Kalagadi District Municipality), Northern Cape about 10 km south of the mining town of Hotazel, 50 km north of Kathu and 50 km west of Kuruman. Before 2011 the Perth Project area was under the administration of the District Municipal Authority and from 2012 the area will be re-demarcated and transferred to the jurisdiction of the Joe Morolong Local Municipality (previously called the Moshaweng Local Municipality).

Figure 1 Perth Locality

2 TERMS OF REFERENCE

Sebilo appointed MWA (the Consultants) to undertake a study on the impact of the proposed Perth Mine on the affected environment, and to submit a Socio-economic Impact Assessment Report that will reflect the outcome of the study. The terms of reference of the study included the following:

- A desk study of available literature and existing information relevant to the study;
- A description of the socio-economic dynamics of the affected environment;
- Identification and assessment of the potential economic impacts of the proposed development (including impacts associated with the construction, operation, decommissioning and post closure phases of the project), focussing specifically on the landowner as well as on surrounding communities;
- Recommended mitigation measures to minimise impacts associated with the proposed mining project; and
- Recommended monitoring measures to ensure the correct implementation and adequacy of recommended mitigation measures, if applicable.

3 BASELINE CONDITIONS

3.1 Description of the Project Area

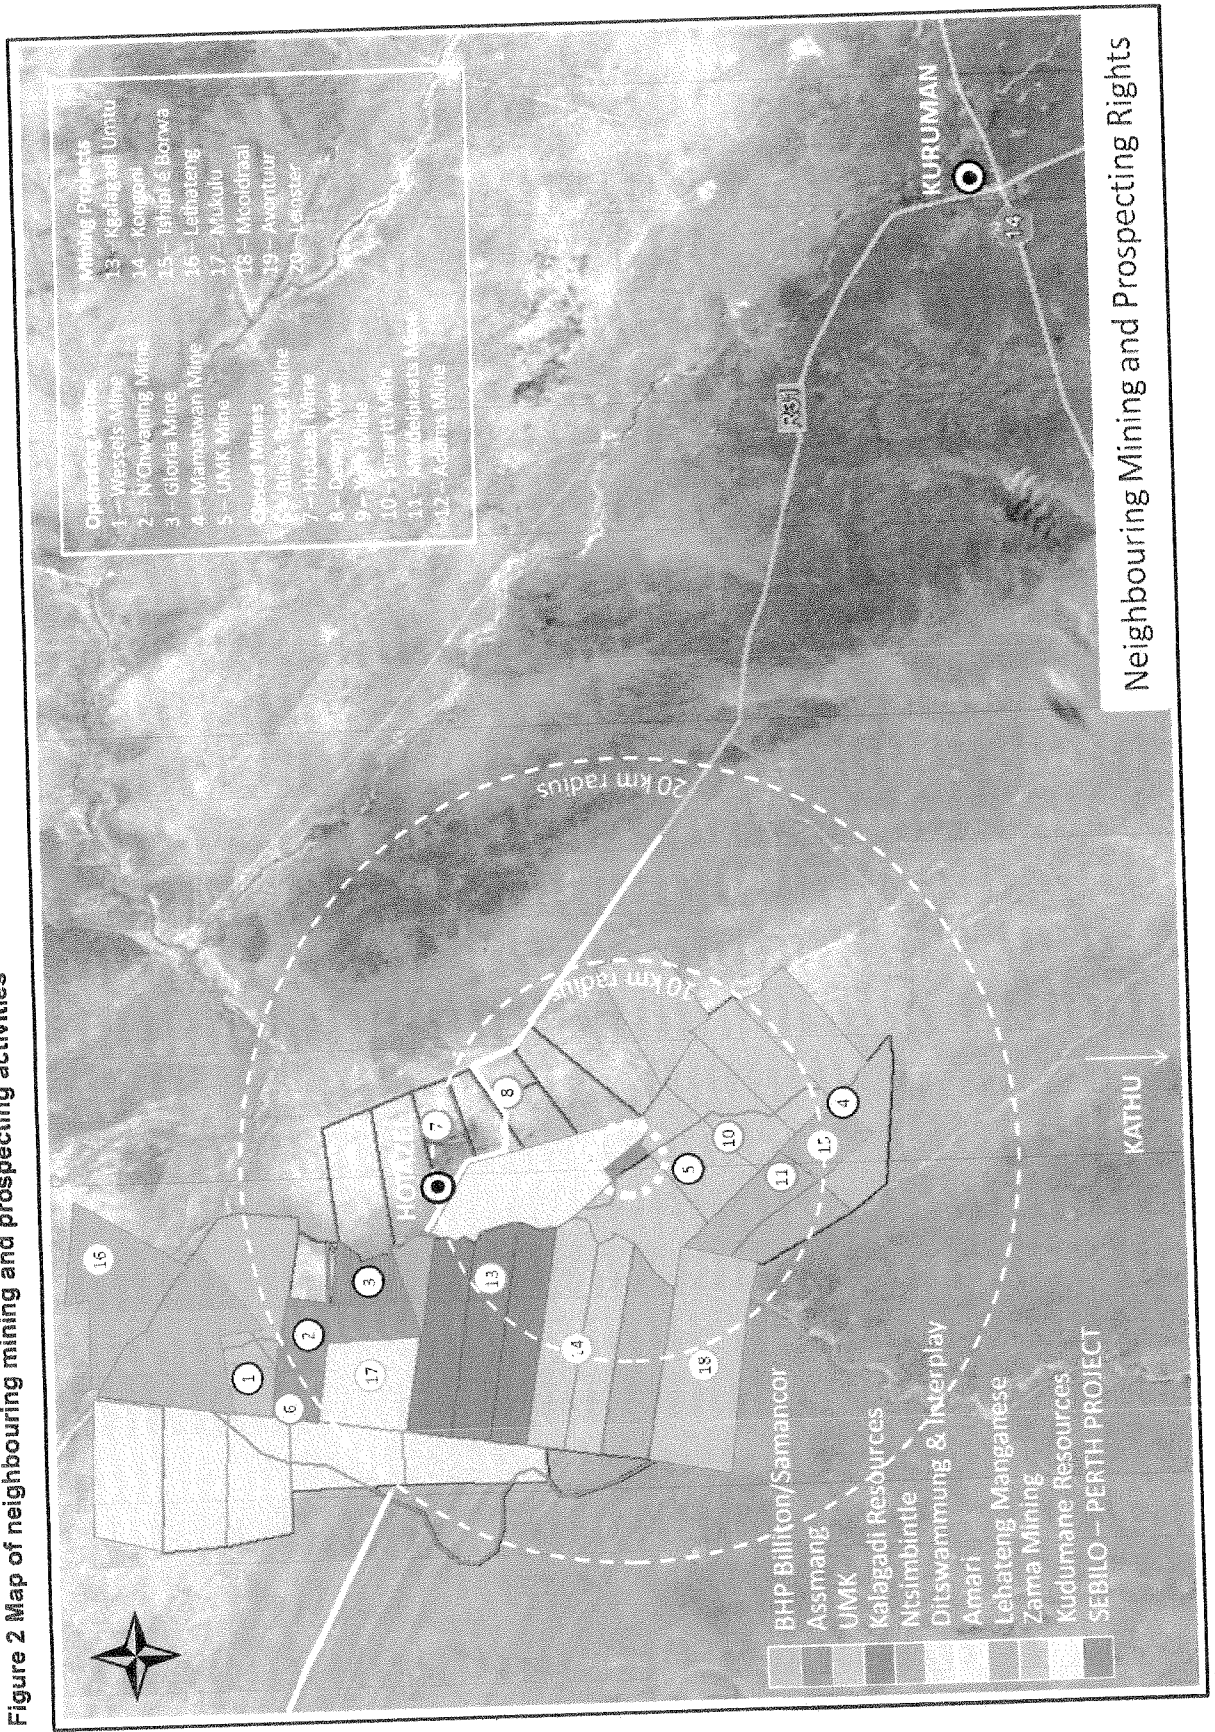

The Perth Project is surrounded by existing manganese mines, prospecting permits and cattle farms. The nearest community (the small village of Magobing), which form part of the Batharo Ba Ga Motlhwane Traditional Authority, are situated 15 km towards the north east.

The Perth Project, which is situated in the north-western corner of the farm Perth, is bordered by the following farms:

- North-east and east: the Farm Perth which is utilized for livestock farming. There is a prospecting right on the remaining portion of the farm Perth, but no prospecting activities are taking place.
- South-east, south, south-west and west: the Farms Botha and Smartt, belong to the mining company, United Manganese of Kalahari (UMK). Historical mining activities, current prospecting activities and a future mining project.
- North-west and North: the Farm Devon where Assmang's Devon Mine closed operations in the eighties (current prospecting right on this farm).

The wider area is characterised by large tracts of farm lands starkly contrasted by manganese mining infrastructure. Section 3.5.1 provides more details on current and future mining activities.

Figure 2 Map of neighbouring mining and prospecting activities

Neighbouring Mining and Prospecting Rights

3.2 Accessibility

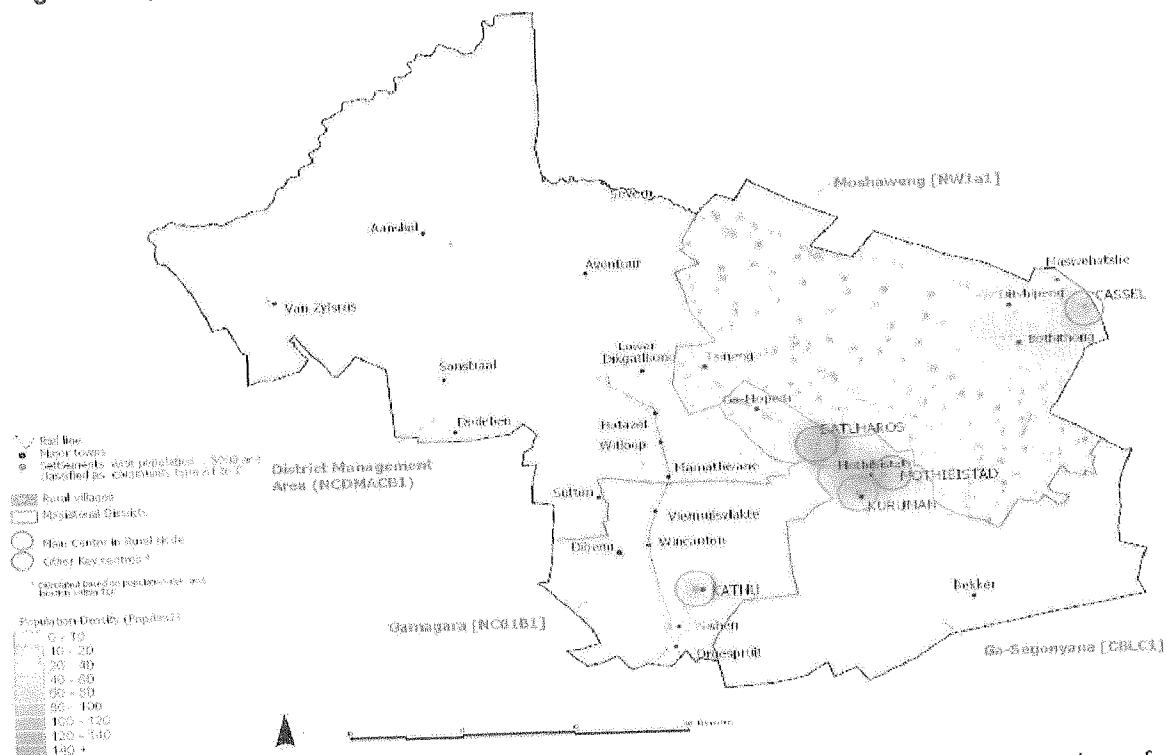

The Perth Site can be reached by a 2 km gravel road that links with the R380 Kathu-Hotazel tarred road. Local infrastructure is generally good in the surrounding towns, having been developed to serve the needs of the manganese and iron ore mining activities in the region. The towns of Kathu and Kuruman are served by a network of well-maintained tarred and gravel roads. The nearest national airport is located in Kimberley, about 270km to the southeast of Kathu. However, there is also a smaller privately-owned aerodrome in Kathu which offers limited service to the public.

3.3 Socio-Economic Baseline Data

3.3.1 Demographics

The JTG District Municipality, is the second smallest district in the Northern Cape, occupying only 6% of the Province (27 293 km²). It has a population density of 6.78 people per square km and the average household density in JTG District Municipality is 1.62 persons per household. The District comprise of three Local Municipalities viz; Gamagara, Ga-Segonyane and Joe Morolong.

Figure 3 Population Density

The JTG District Municipality has both rural and peri-urban features and comprise of 186 settlements with 80% of these villages are located in Joe Morolong. The largest area of the District Municipality is covered by rural land uses and utilised only for extensive grazing, game farming and mining. All privately owned land is used for cattle, sheep or game farming. The area

is well known for good commercial hunting in the winter and game farming is becoming ever more popular. The average size of these farms varies from about 6 000ha in the dry western half to about 2 000ha along the banks of the rivers and to the east.

According to Census 2001, the population of the study area was estimated at 170 659 comprised of 41 269 households. Census 2007 however put the household population at approximately 40 225 suggesting a decline in the population for Ga-Segonyana and Joe Morolong. Gamagara is the only area showing population growth and this can be attributed to employment opportunities created by the mines in the area while the decline in Joe Morolong and Ga-Segonyana could be a result of HIV-AIDS and out-migration in search of higher-learning and job opportunities. The District expects the decline to continue and predict a 0.29% population growth by 2015.

The population is largely young with approximately 55% under 20 years and over 66% are of the working age. While this may provide the future labour force for the proposed Perth Mine, a significant number (27.6%) of the population in 2001 had no formal education with approximately 1.83% achieving some tertiary education. See table below.

Table 1 Education Statistics

Category	Comparison			Average (District)
	Ga-Segonyana	Gamagara	Joe Morolong	
No schooling	17%	15%	24%	20%
Some primary	36%	27%	46%	41%
Completed primary	7%	7%	7%	7%
Some secondary	26%	22%	17%	21%
Grade 12 / Matric	11%	20%	4%	8%
Diploma/Certificate with grade 12	3%	6%	1%	2%
Bachelor & higher	0%	2%	0%	1%

Source: Statssa 2001

This means that the majority of the population have a low skill level and would either need employment in low-skill sectors, or better education opportunities in order to improve the skills levels. Provision of tertiary institutions is essential as currently, there are none in the area; however, the Government has announced that a University of the Northern Cape will be opened in the next two years.

A high number of 61% of the economically active people is said to be unemployed. The majority (80%) of the unemployed are based in the Joe Morolong and Ga-Segonyana Local Municipalities (58%). Gamagara has a higher employment profile (76%) due to the presence of the mines in the area. Poverty is very widespread in the District and a significant number of the population relies on government social grants. Access to municipal services is the biggest challenge in the District. This may be due to inability to pay for basic services, a low professional and knowledge base in the area. The problem is exacerbated by the vastly sparsely populated areas that make provision of infrastructure expensive and highly unattainable.

Table 2 Municipal Services

Category	Comparison			Average (District)
	Ga- Segonyana	Gamagara	Joe Morolong	
Source of Energy				
Electricity	91%	97%	86%	90%
Candles	8%	2%	12%	9%
Paraffin	1%	-	2%	1%
Access to water				
Piped water inside the dwelling	22%	61%	1%	20%
Piped water inside the yard	23%	36%	1%	16%
Piped water from access point outside the yard	51%	1%	81%	55%
Borehole	1%	1%	13%	6%
Other	2%	1%	1%	3%
Toilet facilities				
Flush toilet (connected to sewerage) system)	2%	70%	1%	16%
Flush toilet (with septic tank)	10%	20%	-	3%
Chemical toilet	1%	-	-	-
Pit latrine with ventilation (vip)	29%	4%	16%	20%
Pit latrines without ventilation	40%	5%	58%	41%
Bucket latrines	1%	1%	-	-
None	16%	-	24%	19%
Refuse Removal				
Removed by local authority at least once a week	20%	91%	-	17%
Communal refuse dump	1%	1%	2%	2%
Own refuse dump	70%	7%	85%	72%
No rubbish disposal	8%	1%	12%	10%

Source: Statssa 2001

The provision of adequate sanitation facilities and refuse removal services is essential to mitigate the health risks and possible pollution of water streams of which a noticeable number of people and animals depend on. Hospitals are mainly situated in Kuruman and Ga-Segonyana and a number of clinics and mobile clinics are spread in the area however the services are clearly inadequate and fragmented. Tuberculosis, asbestosis and HIV/AIDS are three diseases which have been raised as a concern in the area with HIV/AIDS as a main contributor of mortality.

Housing is mostly located on tribal land. A large number of the people (83%) own their homes with only 7% renting. Dwelling types are mostly brick and mortar with Joe Morolong showing a higher number of traditional structures (mud). The JTG District Municipality seems to have the

smallest percentage (2%) of informal settlements in the country however this may change as there have been more mining rights awarded in the District Municipality, a consequence of which may be an increase in demand for housing and basic services.

The majority of the people (75.6%) travel by foot in the JTG District Municipality with 13% utilising public transport modes.

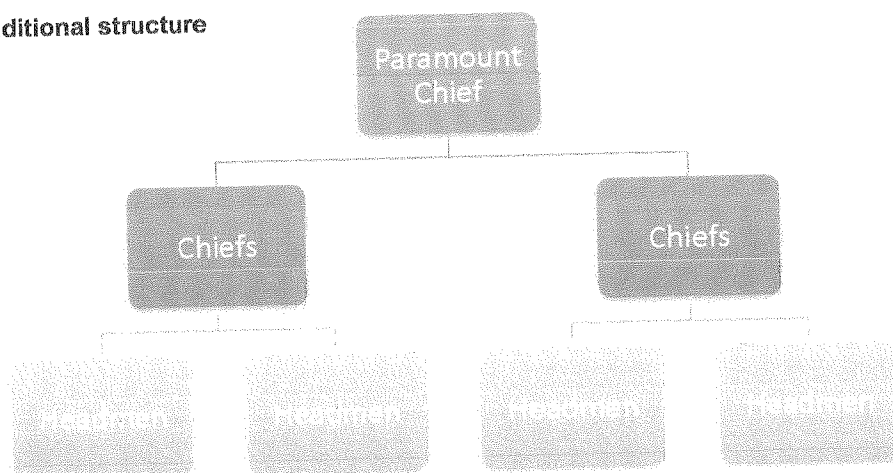

3.4 Batlharo Ba Ga Motlhware Traditional Authority

Traditional Authorities are important institutions that give effect to traditional life and play an essential role in the day-to-day administration of rural communities. The most recognised and important roles of Traditional Authorities are:

- Presiding over customary law courts and maintaining law and order;
- Assisting members of the community in their dealings with the state;
- Lobby government and other agencies for the development of their areas;
- Convening meetings to consult with communities on needs, principles and provide information;
- Making recommendations on land allocation and settlement of land disputes; and
- Protecting cultural values and providing a sense of community in their areas through a communal social frame of reference.

The Batlharo Ba Ga Motlhware Traditional Authority area covers approximately 459 532 km² with an estimated population of 37 270 (Census 2001). This Traditional Authority is the biggest Traditional Authority in the JTG District Municipality and straddles both the Ga-Segonyana and Joe Morolong Local Municipalities. The Traditional Leadership and Governance Framework Act of 2003 make provision for women to act as Traditional leaders. Kgosigadi PP Toto is the acting Paramount Chief of the Batlharos and a recognised spokesperson and custodian of the Batlharo Ba Ga Motlhware. She will be officially inaugurated in May 2012. The Kgosigadi PP Toto presides over a number of villages covering Heuningvei up to Seoding and includes the communities of Tsining. The Kgosigadi has authority over all the Chiefs in the Traditional Authority. These Chiefs represent a cluster of villages according to cultural practices. Below the Chiefs are headsmen/women to assist the chiefs and act as traditional leaders at local level – see Figure 4 below.

Figure 4 Traditional structure

There are currently tensions in the Tsining community over chieftaincy. According to the landowner some of the conflicting parties' instituted a land claim on the land where the proposed Perth Mine will be developed. The Department of Land Affairs has been consulted by the Sebilo Resources representative on these claims and denied any receipt of such claim on Perth farm. The office of the Kgosigadi has also been consulted and has refuted these claims.

Despite the existence of numerous mines in the surrounding areas, the Batlharo claims that there is little evidence of the benefits of mining on their land. According to the Batlharo there are still mud schools built by the community and most of the schools are over-populated with little and inadequate resources. School drop-out rates are alleged to be high resulting in poor literacy and a low skills base that exacerbates the already high poverty levels in the area. A significant number of the people depend on social grants and children are looked after by grandparents because the young leave the area in search for job opportunities - the community claims discriminatory recruitment practices that favour outsiders.

As with many rural areas, there are limited job opportunities and recreation facilities resulting in young people to engaging in undesirable social behaviour such as like excessive drinking and teenage pregnancies.

During the meetings held with the Batlharo, people complained of hardships caused by negligence by the local authority. They allege that in the "old days" the Government used to provide boreholes for the people - now they struggle to get water as the current dispensation no longer provide such services. This situation is aggravated by the drying of water-streams of which mines are blamed.

On a positive front, the Traditional Authority is very excited about the proposed Perth Mine as Sebilo has offered the community a 5% shareholding in the Mine. They believe that Sebilo is the first company to do so and are optimistic about the future and the impact of the proposed Perth Mine on their community. It is anticipated that through the proposed Perth Mine the community will have the much need social facilities like child-care, schools and skills training.

The Ba Ga Motlhwane Community Trust has been established and will hold the 5% interest of the shareholding in the Perth Mine and dividends will be paid into this trust account. Sebilo paid for the establishment of this Trust and has already paid R250 000 into the Trust account. It is envisaged that Trust funds will be used to alleviate poverty and accelerate development in the area. A ten year development plan to be facilitated by independent consultants will guide and coordinate the community development program.

In addition to dividends, specific LED projects, as provided in the Perth Social and Labour Plan, will also be directed towards these communities. Ultimately the Traditional Authority will be responsible for their future and the sustainability thereof beyond mining. The conundrum lies in the ability of the Traditional Authority to invest their dividends towards ensuring a better life while at the same time guaranteeing the long term sustainability and independence of the Traditional Authority.

Figure 5 Batlharo Ba Ga Motlhwane Traditional Authority: A Rural Village

Figure 6 Batharo Ba Ga Motlhware Traditional Authority: A Peri-Urban Village

These photos are examples of some of the communities that Sebilo will impact through job creation, community development and dividend payouts

3.5 Economic Activities

3.5.1 Mining

The main economic activities in the Northern Cape are farming and mining. Mining activities are mainly iron and manganese, with some of the biggest deposits in the world found in the Northern Cape Province. The Sishen iron-ore mine is one of the largest open-cast mines in the world and the iron-ore railway from Sishen to Saldanha is one of the longest iron-ore carriers in the world. The province accounts for some 7% of global diamond exports (by carat), 13% of all zinc and lead exports and more than 25% of the world's manganese exports. Mining giants like De Beers, Kumba Iron Ore, Samancor, and Assmang operate in the Northern Cape. Other important metals and minerals include copper, limestone, gypsum, rose quartz, tiger's eye, mica, verdite and semi-precious stones.

According to the Census 2001 statistics released by Statistics South Africa (StasSA), about 15 478 people were employed in the Northern Cape's Mining and Quarrying sector in 2001 – see Table 3. The Annual Labour Force Survey (also released by StatsSA) indicated this number to be around 20 706. Both these numbers increased by around between 22% and 26% in 2007. A significant increase was observed in mining employment specifically in the JTG District Municipality within this timeframe.

Table 3 Labour Force Statistics – Mining and Quarrying

	2001	2007	% increase	2001	2007	% increase
Mining and Quarrying						
	Northern Cape			JTG District Municipality		
Census 2001	15 478	N/A	22%	3 819	N/A	51%
Community Survey 2007	N/A	18 898		N/A	5 772	
Annual Labour Force Survey	20 706	26 048	26%	N/A	N/A	

The largest land-based sedimentary manganese deposits of the world are found in the Northern Cape's Kalahari Manganese Field. It accounts for up to 80% of the world's known and commercially mineable manganese reserves. However, South Africa produces only about 15% of world demand in 2009 (Chamber of Mines South African: Facts and Figures 2010). In 2010, South African primary manganese ore production increased by 57% to 7.1 million tons, coinciding with the global economic recovery as well as new projects coming into production.

Miningmx reported that South Africa's manganese sector is geared for large-scale expansion and would add around 15% to global capacity within the next few years. This could mean that the Kalahari Manganese Field could contribute around 30% of world production. Transnet has undertaken to increase, in time, the rail capacity available to the manganese mines from some 5Mtpa to 12Mtpa – more or less the levels of production which will be reached when the new mines get going.

The extent of prospecting and mining activities can be seen in Figure 2. Seven mines, which have been in operation since the seventies have closed in recent years. Currently five mines are operational – Samancor's Wessels and Mamatwan mines, Assmang's N'Chwaning and Gloria mines, and UMK's Manganese Mine. There are currently a number of manganese projects that

are between advanced exploration and construction phases belonging to well known mining companies as well as smaller unknown BEE entities. This study has identified around eight of these projects.

Employment in manganese mining, which is basically confined to the Kalahari Manganese Field, has grown from 2 000¹ in 2001 to 5 879² in 2010 as indicated in Figure 7 below. It is estimated, based on public information and an extrapolation based on production tonnages, that between 2 000 and 4 000 additional jobs could be created within the next five to ten years in a radius of 50 km around the Perth Project. The development of these mines will have a huge impact on housing delivery and other social facilities like schools and clinics.

Figure 7 Manganese Employment in South Africa

Considering that the proposed Perth Mine will only employ around 130 permanent employees at full production, the socio-economic impact within the surrounding areas and within the local and district municipalities will be relatively small.

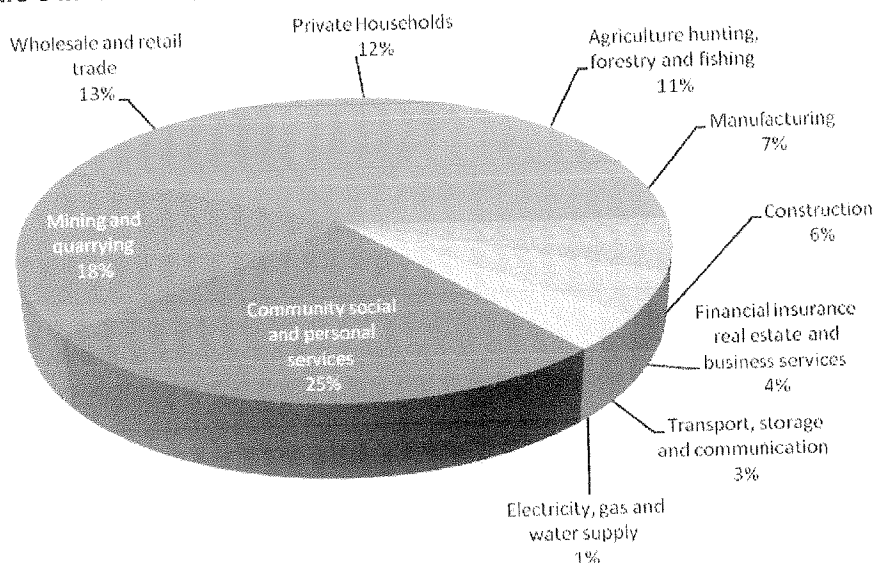

3.5.2 Other economic activities

Although mining is currently the key economic driver in the JTG District Municipality, the challenge for this sector is its inability to yield sustainable jobs given that the extraction of mineral resources is not sustainable. Diversifying the local economy in the medium to long term is therefore perceived to be of utmost importance. The short term strategy for the municipality is to broaden and encourage the opportunities presented by a variety of mineral resources present in the area.

¹ South African mining industry snapshot 2009 (Chamber of Mines)

² Chamber of Mines South African: Facts and Figures 2010

Figure 8 Industries in JTG District Municipality (2001)

According to the Census 2001 community, social and personal services was the main employment sector in the district municipality followed by mining and quarrying and wholesale and retail trade – see Figure 8 above.

While most of the District Municipal growth and development related policy and strategy documents put agriculture as one of the key economic pillars in the area, Figure 8 indicates only 11% of the economically active population are involved in agriculture related activities. This may be due to under-counting in people engaged in subsistence farming particularly in Ga-Segonyana and Joe Morolong.

The manufacturing sector is relatively small and mostly mining related. The transport, storage and communication sector within the JTG District Municipality is characterised by a limited available number of transport modes, storage facilities, huge backlogs in communication, and a lack of reliable public transport services. This is the reality despite the fact that Kuruman is an important distribution depot for the surrounding rural areas. Due to the poor road conditions that connect the rural and urban areas, a lack of service provision by the bus and freight transport companies pose a huge problem.

Nature-based tourism (ecotourism) is the prime tourist attraction to the Northern Cape Province and JTG District Municipality. Overall accessibility and remoteness to tourist attractions have proven to be two major limiting factors for tourism growth in the area.

The rural land in the district is used extensively for cattle, sheep, goat and game farming. The area is well known for its good commercial hunting in the winter.

As with other previously peri-urban and rural communities in South Africa, the study area was planned without a long-term vision, is largely dormitory with no local economy, inadequate and lack of infrastructure.

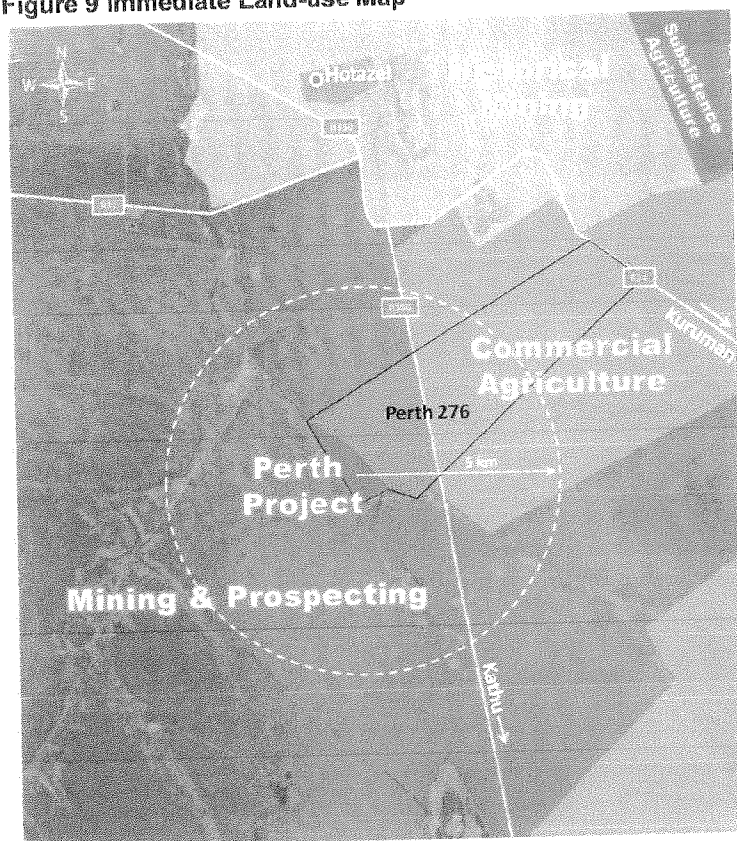

3.6 Land Use Assessment

The largest part of the district area is characterized as rural land and extensively used for grazing, game farming and mining activities. All privately held land is used for cattle, sheep and game farming. The vast mineral wealth of the Northern Cape Province attracted Kumba, Samancor, and Assmang into the Province to mine manganese and iron ore.

The town of Hotazel, 10 km north of the Perth Project, is a small community with a population close to 2 500 people. It was founded in 1958 as a mining village for a manganese mine. The area surrounding Hotazel is characterised mainly by current or historical mining activity. This area that was once a commercial agricultural hub has been replaced by manganese mines and prospects. The only remaining commercial agricultural land can be found towards the east of the R380 Hotazel-Kathu road.

Mining took place on the Perth Project area in the seventies. Assmang extracted low-grade manganese ore from the Perth Manganese Mine up until 1978, using both opencast and underground mining activities. The opencast pit covers an area of approximately 9.6 ha and underground mining covers an area of approximately 12.2 ha. Surface infrastructure was demolished during 1992. A Prospecting Right issued on this property was transferred according to section 11 of the Minerals and Petroleum Resources Development Act (Act 28 of 2002) from Assmang Limited to Sebilo Resources (Pty) Ltd during 2009. This allowed Sebilo to conduct prospecting activities towards the south, south-west, west and north-west of the original opencast pit.

Figure 9 Immediate Land-use Map

The landowner continued with cattle farming, mainly Bonsmaras, on the remaining and largest portion of the farm Perth (2 000 ha in total) which stretches from the dirt road (northern boundary of the open pit) across the R380 road towards the Kuruman R31 road. According to the landowner, the farm is recognized as one of the leading Bonsmara breeders in the area. The landowner further pointed out that the farm Perth is the only remaining commercial agricultural land in the Kalahari Manganese Field (west of the R380).

The landowner and tenant indicated, during a meeting held on 8 March 2012 in Hotazel, that they are planning to plant lusern on the portion where current prospecting activities take place. The idea is then to make use of the water in the pit for irrigation purposes.

Cattle farming also occur on the farm Kaneelaar to the south-east of the farm Perth as well as on the farm Devon towards the north-west. Devon is owned by a mining company but is rented by a local farmer.

There are talks about a solar plant which may be established on the farm Perth, about a kilometre north of the proposed Perth Project, along the R380 main road. According to the landowners and other sources, UMK, through its subsidiary Transalloys, is planning to invest in solar energy for their mining operation just south of the proposed Perth Mine. UMK also has a company in Switzerland that build solar panels. Should this development go ahead, it is anticipated that the proposed Perth Mine will have no socio-economic impact on the proposed solar development.

4 IMPACT ASSESSMENT

4.1 Introduction

This section outlines potential impacts on the community and their socio-economic and natural environment, which may be caused by the commencement of mining operations. The social impacts of the proposed mine, relate to people, issues, perceptions and emotive data, and as such is often more difficult to quantify than the bio-physical components.

The stakeholders who are most likely to be influenced directly or indirectly by the construction of the mine are the landowner, members of the surrounding communities in the immediate vicinity of the proposed footprint; more directly those located in the immediate zone surrounding the footprint; and indirectly those community members in the outlying areas further away. Potential socio-economic, environmental and personal impacts were identified and evaluated, and will be discussed below. Probable impacts are derived from desktop study analysis, consultation with role-players and past experiences in mining operations, mine closures and poverty stricken communities.

This Socio-economic Impact Assessment forms the baseline for the quantification and assessment of the social-economic impacts most likely to result from the establishment of the Perth Mine, and contains recommendations on mitigations and management measures that should be implemented in order to minimise or avoid potential, adverse social impacts.

4.2 General Impacts

The proposed Perth Mine, once operational, may have mainly positive and some negative impacts on both local and sending communities. These impacts may however be minimal considering the broader impact of manganese mining activities within the region. The proposed Mine could however contribute positively to the economy and social stability of the area through job creation, support of local suppliers, creation of secondary industries, support of the Local Municipalities and funding of community projects and social services. According to Sebillo labour will, as far as is practically possible, be recruited from the Joe Morolong and Ga-Segonyana areas. At an average basic minimum salary of R 5 000 per month, it is estimated that these permanent workers (± 130) could earn collectively more than R 10 million per annum. While wage flows are one of the key indicators of economic benefit to the community, it is the retention of these wage flows that in fact constitutes the net economic impact. Considering four to six people being directly dependent on every worker, the influence becomes of great importance. Apart from the permanent, directly created job opportunities there may be scope for other entrepreneurial jobs. The labour contingent during construction may also add to the economy of the area. During construction and during the life of the mine, contractors and service industries in the region may benefit from the mining activities. This could have a knock-on effect on suppliers of goods and services in other areas of the country.

Mining is capital intensive and have huge spending power that can contribute immensely to the economy of the area. Procurement spend is considered as a critical factor in the creation of SMME's and local industries.

The proposed Mine's regulatory costs could provide the Government with additional capacity to provide infrastructure and services to the community. These contributions are important not only in developing the national economy, but in the indirect benefit that taxes bring. Perth's contribution to government can include amongst others royalties, corporate taxation, skills levies, UIF, and VAT payments made through mine procurement and through discretionary spending by mine employees. Other contributions include utility payments such as water, electricity and telecommunications services.

It is assumed that the main impact could be job creation with trickle down effects like:

- Co-financing of social infrastructure like roads;
- Poverty alleviation through CSI and SLP allocation (Local Economic Development Programme);
- Opportunities to acquire and build industry related skills base;
- Support of education and school development programs;
- Attracting and creating a skill base in the area; and
- Promoting home-ownership and better lifestyles.

Mining is commonly viewed by society as a dirty business, causing both environmental damage and social disruption. With a new mine there may be an increase in the influx of job seekers to the local and surrounding areas, increased crime levels, overcrowding, informal housing settlements increased unemployment rates, pollution, environmental degradation and the potential spread of communicable diseases, such as HIV/AIDS and Tuberculosis.

Specific negative impacts that the proposed Perth Mine may contribute to, within the broader mine development of the area, include:

- Possible influx of migrants in search of job opportunities;
- Possible growth of informal settlements;
- Possible increase in HIV/AIDS;
- Possible increase in mining related illness; and
- Pressure on infrastructure like water, electricity and roads.

Negative impacts that the proposed Perth Mine may have are focussed mainly on the farm Perth. It is anticipated that farming activities on the farm Perth could be impacted due to reduced grazing and agricultural land. Other impacts on the farm are elaborated below.

Below are specific impacts that are predicted during the various stages of the mining life cycle.

4.3 Predicted Impacts during the Construction Phase

The construction phase of the proposed Perth Mine is expected to start in 2013 and continue until 2014.

4.3.1 Creation of Employment Opportunities

An independent contractor will be used for the construction of the proposed Perth Mine. This contracting company will be responsible for the temporary employment of construction workers during this phase. Sebilo has indicated in its Social and Labour Plan that labour will be sourced from local communities where possible. It is anticipated that the establishment of the mine during construction will create temporary employment opportunities. There may also be possible indirect job opportunities arising from the construction phase as a result of employees' spending power and additional services needed.

The number of temporary job opportunities could mean this impact will have a moderately positive significance.

The landowner is concerned that an influx of people especially during construction could pose a security and theft risk on the farm Perth as well as having a negative environmental impact through oil spills and dumping of rubbish.

4.3.2 Loss of Agricultural Productivity

The landowner and tenant indicated that they are planning to plant lucerne on the portion where future mining activities may take place. Their idea is to make use of the water in the pit for irrigation purposes. Commencement with construction of the proposed mine could have a direct impact on these planned farming activities.

4.4 Predicted Impact during the Operational Phase

The operational phase of the proposed Perth Mine is expected to start in 2013 with pre-stripping and production in 2015.

4.4.1 The creation of employment opportunities

The Perth Project would provide approximately 130 permanent employment opportunities during the operational phase (this exclude contractors and sub-contractors).

The majority of businesses are reliant on mining, retail being the big benefactor. Employed workers are likely to use their money to improve their homes and pay school fees for their children leading to better lifestyles for the local people. This could contribute to greater economic growth and allowing better development of the towns and surrounding areas.

4.4.2 Community Development

4.4.2.1 SLP Allocation

Sebilo has committed to contribute to the improvement of lives in the surrounding communities through three LED projects viz:

- Manyiding School renovation;
- Joe Morolong livestock Farming; and
- 'Provision of Sanitation in Joe Morolong.

In addition to community support, the SLP makes provision for Human Resource Development, the outcome of which could see an increase in a literate and skilled labour force. Recruitment practices will also contribute to the empowerment of women as per Government's employment equity regulations.

4.4.2.2 Batlharo Ba Ga Motlhwane Community Trust

The Batlharo Ba Ga Motlhwane has a 5% shareholding in the Perth Project. The dividends from the Perth Project will be utilised for the upliftment of the community through the development of social infrastructure like building and renovations of schools, child-care facilities, entrepreneurial development and capacity building for the Traditional Authority. The financing and development of infrastructure and economic sector will be preceded by a ten year coherent development plan that will guide and coordinate the developments.

4.4.2.3 CSI

It is anticipated that the proposed Perth Mine will have a small discretionary fund to support short-term projects like sport development and bursaries for the locals.

4.4.3 The loss of and impact on agriculture activities

Borehole water, that provides drinking water to the cattle, could be affected as the current pit has to be dewatered so that mining can commence. Lowering the water levels in the pit could have an effect on the water table and hence on the surrounding boreholes.

Subsistence farmers in the surrounding communities are of the opinion that mining activities pollute water-streams depriving them of essential resource for their livestock and for humans as there are still people dependent on water from the water-stream for human consumption.

Blasting in the open pit could generate dust which, if settling on the cattle farm, may impact grazing quality and quantity. Blasting is also known to create distress in animals and may impact on the breeding process of cattle.

Other concerns by the landowner and again, which are general accepted impacts resulting from mining are:

- Theft;
- Increased traffic;
- Quality of roads;
- Oil spills; and
- Garbage.

4.4.3 Impact on traditional communities

During consultations with the Traditional Authority and Municipality the following claims were made and specific concerns were noted in terms of the proposed mine development:

- Most mines bring in own workers from outside the local areas;
- Locals are overlooked for employment opportunities due to lack of necessary skills and expertise;
- Areas like Kathu have reached their capacity and potential for growth which means migrants could flock to areas like Ga-Segonyane and Joe Morolong. Increase in population in areas like the Batlharo could result in a demand for housing and the mushrooming of informal settlements
- Most migrants are skilled and professionals creating a class structure resulting in resentment and tensions with the locals;
- Schools and child-care facilities are already full in the Batlharo area;
- Increase in child-trafficking in the informal settlements;
- Dilution and marginalisation of local languages and cultural practises;
- Men leave women and children with very little remittance back home;
- Teenagers vulnerable to moral degradation (sugar daddy syndrome);
- Increase in teenage pregnancies and related diseases like HIV/AIDS and STDs;
- Increase in unemployment rate as not all job-seekers are successful and some decide to stay in the area;
- Increase in drinking and substance abuse;
- Infiltration of Somali and Pakistani traders' threatening xenophobia attacks;
- Increased traffic volumes (busses ferrying employees and transporting commodities);
- Increase in road accidents related to trucks (that transport manganese); and
- Pot-holes created by these trucks.

4.5 Predicted Impacts during the Decommissioning and Closure Phase

Mine closure is the period when mining activities cease and the final decommissioning and mine reclamation are being finalised. It is therefore defined as the process leading to the issue of a closure certificate (Minerals and Petroleum Resources Development Act, 2002, Section 43). A Mine Closure Plan details how the Mine will close the mine site and return the surrounding land, as closely as possible, to its pre-mining state– this is expected for Perth by the year 2026.

In general, a mine can be seen as a labour-intensive catalyst for the provision of bulk services in rural areas. It often provides or supports social services and infrastructure. The multiplier effect of a mine proves to be significant as it increases the magnitude of the contribution to local economic development. The direct social benefits accumulate over the life of the mine as a result, and this ultimately create a dependency. The most pertinent form of dependency is created when local and regional economies become dependent on income and employment multipliers generated by a mine. Unfortunately, mining operations have finite and relatively short life spans, which cannot sustain this dependency. Once a mine closes, the social impacts on employee households, communities and regions are usually severe and leave thousands of people impoverished. For example, mine workers may be homeowners, with children attending school and may be part and parcel of the local society. The social fabric of the community may be disrupted with mine closure as households may not be able to afford municipal services, school fees, insurance, food and any other items critical for household survival.

Mine closure is often very traumatic for both mineworkers and their dependents and can often cause severe psychological impacts on those affected. The main impacts associated with mine closure are generally a loss in workers' sense of belonging and demotivation. These impacts often lead to social disruption in households and communities, which can often be associated with escalation in crime rates and abuse, alcoholism and other substance abuse.

Health related issues in both the workforce and surrounding mine communities can often have a negative impact socially. Employees and the surrounding communities could suffer from mining related illnesses and these can cause strains on households as the little money coming in is used on medication and remedies to cure these problems.

Mines generally offer several benefits to its employees including medical aid, a housing allowance, bonuses and car allowances. Once a mine closes and employees lose their jobs, these benefits will no longer be available to employees and their dependants.

In the case of the proposed Perth Mine the magnitude of these typical impacts may be minimal as the proposed mine's labour force will only be a fraction of the broader area's mining workers - an effective loss of between 1% and 5% of the mineworkers in the District Municipality.

Some local businesses that supply the proposed Perth Mine directly may be impacted by mine closure if they are dependent on the mine's existence or have the mine as a major client. There may be also other businesses that provide services to mineworkers and their dependants, such as taxi transport, shops, and other SMMEs that may be impacted to a certain extent.

It is anticipated that the future closure of the proposed Perth Mine will have a minimal impact on the property market as well as schools in the neighbouring towns.

4.6 Sustainability

The biggest challenge and possible future impact of the proposed Perth Mine could be in terms of dependency and the ultimate sustainability of those communities that the mine will support. As indicated earlier, the Batlharo communities, as a shareholder of Sebilo, will earn dividends annually and be on the receiving end of large scale LED projects. These dividend flows and upliftment projects will have a positive impact in the short to medium term. However, once the life of the Perth Mine comes to an end, the money flows and contributions to the Batlharo will end. The worst case scenario is that, assuming that the Batlharo will have no other shareholding in mining ventures, the Traditional Authority may have become dependent on mining and that the impact will be disastrous for the community.

For this reason, a 10 year development plan will be developed for the Batlharo to assist in the sustainable development of the rural communities. It must be also noted that the issue of dependency or life after mining have not been raised during the consultations with the traditional authority nor the municipality.

4.7 Impact Rating for all Phases

For the activities detailed and outlined above, the evaluation criteria tabulated and listed below was applied in assessing the impacts associated with the proposed mining operation.

Explanation of **probability** of impact occurrence

Probability of impact occurrence	Explanation of probability
Very low (VL)	<20% sure of particular fact or likelihood of impact occurring.
Low (L)	20 to 39% sure of particular fact or likelihood of impact occurring.
Moderate (M)	40 to 59% sure of particular fact or likelihood of impact occurring.
High (H)	60 to 79% sure of particular fact or likelihood of impact occurring.
Very high (VH)	80 to 99% sure of particular fact or likelihood of impact occurring.
Definite (D)	100% sure of particular fact or likelihood of impact occurring.

Explanation of **extent** of impact

Extent of impact	Explanation of extent
Site specific (SSP)	Direct and indirect impacts limited to site of impact only.
Local (L)	Direct and indirect impacts affecting environmental elements within the Hotazel area.
Regional (R)	Direct and indirect impacts affecting environmental elements within Northern Cape Province.
National (N)	Direct and indirect impacts affecting environmental elements on a national level.
Global (G)	Direct and indirect impacts affecting environmental elements on a global level.

Explanation of **duration** of impact

Duration of impact	Explanation of duration
Very short (VS)	Less than 1 year
Short (S)	1 to 5 years
Medium (M)	6 to 12 years
Long (L)	13 to 50 years
Very long (VL)	Longer than 50 years
Permanent (P)	Permanent

Explanation of impact **significance**

Impact significance	Explanation of significance
No impact (NI)	There would be no impact at all - not even a very low impact on the system or any of its parts.
Very low (VL)	Impact would be negligible. In the case of negative impacts, almost no mitigation and/or remedial activity will be needed, and any minor steps which might be needed would be easy, cheap and simple. In the case of positive impacts, alternative means would almost all likely to be better, in one or a number of ways, than this means of achieving the benefit.
Low (L)	Impact would be of a low order and with little real effect. In the case of negative impacts, mitigation and/or remedial activity would be either easily achieved or little would be required, or both. In case of positive impacts, alternative means for achieving this benefit would likely be easier, cheaper, more effective, less time-consuming, or some combination of these.
Moderate significance (MS)	Impact would be real but not substantial within the bounds of those which could occur. In the case of negative impacts, mitigation and/or remedial activity would be both feasible and fairly easily possible. In the case of positive impacts, other means of achieving these benefits would be about equal in time, cost and effort.
High significance (HS)	Impacts of a substantial order. In the case of negative impacts, mitigation and/or remedial activity would be feasible but difficult, expensive, time-consuming or some combination of these. In the case of positive impacts, other means of achieving this benefit would be feasible, but these would be more difficult, expensive, time-consuming or some combination of these.
Very high significance (VHS)	Of the highest order possible within the bounds of impacts which could occur. In the case of negative impacts, there would be no possible mitigation and/or remedial activity to offset the impact at the spatial or time scale for which it was predicted. In the case of positive impacts, there is no real alternative to achieving the benefit.

The table below summarises the main impacts discussed in the construction, operational and decommissioning phases with their significance ratings.

Type of Impact	Impact	Area/Activity	Probability of Occurrence	Extent of impact	Duration of impact	Impact significance
Positive	Employment opportunities	Construction	Definite	Local & Regional	Short	High
Positive		Production	Definite	Local & Regional	Medium	Moderate
Negative	Loss of agricultural productivity including impact on cattle drinking water (Farm Perth)		Moderate*	Local	Medium	Moderate
Negative	Influx of job seekers, including growth in informal settlements	Construction Production	Low	Local	Medium	Low
Negative	Nuisance related to construction activities (increase in traffic, crime, blasting, oil spills, etc.)		Moderate	Local	Medium	Low
Positive	Establish and develop SMMEs (including procurement opportunities for existing suppliers)		Definite	Local & Regional	Short	Low
Positive	Community assistance and poverty alleviation through Local Economic Development and Corporate Social Investment		Definite	Local & Regional	Short	Low
Positive	Training and skills development	Production	Definite	Local	Short	Low
Positive	Additional capacity (rates & taxes) to local government to provide infrastructure and services to the community		High	Local & Regional	Short	Low
Negative	Negative impacts on the Bathharo (social, cultural, health, etc.)	Production Mine Closure	Low	Local & Regional	Medium	Low
Negative	Loss of employment		Definite	Local & Regional	Medium	Low
Negative	Social impacts on employees and their families	Mine Closure	High	Local & Regional	Medium	Low
Negative	Bathharo dependency on mining		High	Local & Regional	Medium	High

*Hydrology Study to be consulted in this regard.

5 SUMMARY OF MITIGATION AND MONITORING MEASURES

Impact	Project Phase	Mitigation or Enhancement Measures	Responsible Person
Employment opportunities	Construction Production	Sebilo is advised to make use of local labour as far as possible in all stages and for all aspects of the project. This applies to all contractors during construction. Liaison with local community structures and the Local Municipality will assist in identifying a local labour pool.	Construction Manager / Contractor Manager / HR Manager
Loss of agricultural productivity	Construction Production	Sebilo is currently in negotiations with the landowner to purchase the farm Perth. Sebilo is advised to: <ul style="list-style-type: none"> • Raise awareness amongst construction workers about local traditions and practices. • Inform local businesses about the expected influx of construction workers so that they could plan for extra demand. • Ensure that the local community communicates their expectations of construction workers' behaviour with the construction sub-contractor, and formalize a written agreement between the community and the sub-contractor. • Ensure that employment procedure / policy is communicated to local stakeholders, especially local landowner. 	Sebilo Directors Construction Manager / Contractor Manager / HR Manager
Influx of job seekers, including growth in informal settlements	Construction Production	Sebilo to consider the establishment of a Monitoring Forum in order to monitor the construction phase and the implementation of the recommended mitigation measures. Forum should comprise of representatives from local communities, local municipality, landowner and contractor(s).	Construction Manager / Contractor Manager / HR Manager
Nuisance related to construction activities (increase in traffic, crime, blasting, oil spills, etc.)	Construction Production	Sebilo and the contractor(s) should, in consultation with representatives from the MF, develop a code of conduct for the construction phase. The code should identify which types of behaviour and activities are not acceptable. Sebilo to consult with local South African Police Services to establish standard operating procedures for the control and removal of loiterers at the construction site. Construction workers should be clearly identifiable by wearing proper construction uniforms displaying the logo of the construction company.	Construction Manager / Mine Manager / Contractor Manager

Impact	Project Phase	Mitigation or Enhancement Measures	Responsible Person
The movement of construction workers on and off the site should be closely managed and monitored by the contractors. Contractors should therefore be responsible for making the necessary arrangements for transporting workers to and from site over weekends or after hours.	Production	The Perth Social and Labour Plan provides adequate measures to establish and develop local SMMEs and integrate them within the proposed mine's supply chain.	Procurement Manager
Establish and develop SMMEs (including procurement opportunities for existing suppliers)	Production	The Perth Social and Labour Plan provides a five year plan for Local Economic Development, comprising three individual projects, in the neighbouring communities. Sebilo is advised to avoid handing out cheques or making random payments towards social causes and requests. A strategic approach is required to guide the company on these matters.	Community Liaison / Sustainability Manager
Community assistance and poverty alleviation through Local Economic Development and Corporate Social Investment	Production	The Perth Social and Labour Plan provide adequate measures to train and develop employees.	HRD Manager
Training and skills development	Production	Maintain good relationships with local authorities and ensuring prompt payments of rates and taxes will minimise any stakeholder risks and further ensure that the municipality is in the position to provide much needed basic services.	Mine Manager
Additional capacity (rates & taxes) to local government to provide infrastructure and services to the community	Production	Continues engagement with the Traditional Authority will be important to build trust and understanding. The 10 year development plan for the Bathharo will further investigate these challenges and concerns.	Community Liaison / Sustainability Manager
Negative impacts on the Bathharo (social, cultural, health, etc.)	Production Mine Closure	Capacity building and skills training among employees are critical and would be highly beneficial to those involved, especially if they receive portable skills to enable them to also find work elsewhere and in other similar environments.	Mine Manager / HRD Manager
Loss of employment	Mine Closure	The Perth Social and Labour Plan provides mechanisms and strategies to prevent job losses or where these cannot be avoided to implement appropriate plans to ameliorate the social and economic impact that downscaling of the operations and/or closure may have on employees, communities and the economy.	Community Liaison / Sustainability Manager
Social impacts on employees and their families	Mine Closure	Conduct detailed socio-economic assessments five years before mine closure to determine the impacts and develop mitigatory measures.	Community Liaison / Sustainability Manager
Bathharo dependency on mining	Mine Closure		

6 GAPS AND ASSESSMENT SHORTCOMINGS

Although historical, Census 2001 provides reliable baseline data that have been used to inform the Socio-economic Baseline Study. Reference has been made to the 2007 Community Survey; however this dataset has been found to be inaccurate. The statistics in this Study may be outdated resulting in undercounting in some instances and over counting in others.

The Census 2011 results will be released in 2013 and Sebilo should update this Socio-economic Baseline information with the results of the Census 2011.

7 CONCLUSION

Based on the findings of this Study, it can be concluded that the impact on the local socio-economic environment in general, poses no fatal flaws to the development of the proposed project. This is based on the condition that recommended mitigating factors that were identified and discussed in this document, are implemented.

PERTH MINING RIGHT APPLICATION – OPEN DAY (DMR Reference NC 30/5/1/2/2/10004MR)

Dear Interested and Affected Party

Welcome to the Sebilo Perth Mining Right Application Open Day. This document provides you with an overview of the project as well as the process that is followed to complete the application.

Scoping Phase

The purpose of the Scoping Phase of the Mining Right application is to identify issues of concern regarding the mining project, to obtain suggestions for enhanced benefits of the project, to identify alternatives that can be considered and to verify that Interested and Affected Parties (IAP) comments have been captured. The Scoping Phase of the project was completed in December 2011, following a public meeting on 5 December to discuss the project with IAP. A draft Scoping Report was made available to IAP for comment during January 2012. A copy of this document is available today for your perusal. The results of the Scoping Phase were used to define the EIA Phase of the project.

Environmental Impact Assessment (EIA) Phase

During the EIA phase of the project, the impact of the proposed mining project on the receiving environment is determined, based on the mine plan and proposed mining and mineral processing operations. In order to achieve this, independent specialist consultants were appointed by Sebilo to undertake the EIA and to develop an Environmental Management Plan (EMP). The EMP will be implemented upon approval by Government, to eliminate or minimise negative impacts and to enhance positive impacts identified. Comments and issues raised by IAP are incorporated into the EIA phase of the project and your input is therefore important and valuable to us. The specialist consultants who worked on the project, are present today. Please discuss the project and your specific issues and concerns with them. We have also provided posters and handouts for your information. For the purpose of completing the EIA and the EMP, we request that you record your questions, issues and concerns on the attached comment sheet to ensure that we capture it in the final documents that will be submitted to the Government for comment. A draft EMP will be compiled by May and will be made available to you for comment over a 30-day period. A printed copy of the document will be kept at the Hotazel library. Electronic copies of the document will be made available via the internet, on request. If you would like to receive an electronic or a printed copy of the EMP for evaluation, please indicate so on the Comment Sheet so that the necessary arrangements can be made.

Timeline for completion of the application

The timeline for submission of the Scoping Report and the EMP, is prescribed by the Department of Mineral Resources (DMR). According to their instruction, the project is completed according to the following schedule:

- Acceptance of the Mining Right Application by the DMR: 11 November 2011
- Submission of draft Scoping Report to the DMR for comment: 12 December 2011
- EIA Phase of the project: January - April 2012
- Submission of draft EMP to DMR for comment: 11 May 2012
- Submission of draft EMP to IAP for comment: 11 May – 11 June 2012
- Finalisation of the Mineral Rights Application by the DMR: by 12 November 2012

Thank you for your participation in this project.

PERTH MYNREG AANSOEK – OPE DAG (DMR Verwysing NC 30/5/1/2/2/10004MR)

Geliewe Geïnteresseerde en Geaffekteerde Party

Baie welkom by die Sebilo Perth Mynreg Aansoek Ope Dag. Die doel van hierdie dokument is om u 'n oorsig te gee aangaande die projek, sowel as oor die prosedure om die projek te voltooi.

Bestek Fase

The doel van die Bestek Fase vir die mynreg aansoek, is om spesifieke aspekte van kommer aangaande die voorgestelde mynbou projek te identifiseer, om voorstelle aangaande die voordele van die projek te evalueer, om alternatiewe te identifiseer en om u insette vas te vang en te verifieer. Die Bestek Fase van die projek is in Desember 2011 voltooi, nadat 'n Publieke Vergadering op 5 Desember gehou is om die projek met Geïnteresseerde en Geaffekteerde Partye (GGP) te bespreek. 'n Voorlopige Bestekverslag is aan u beskikbaar gestel vir kommentaar gedurende Januarie 2012. 'n Afskrif van hierdie verslag is vandag hier beskikbaar, indien u sou belangstel om daarna te kyk. Die resultate van die Bestek Fase van die projek het die basis vir die Omgewings Impak Studie (OIS) gevorm.

Omgewings Impak Studie

Gedurende die OIS fase van die projek, word die impak van die voorgestelde myn op die omgewing geevalueer, gebaseer op die mynplan en die voorgestelde myn en erts verwerkings opsies. Om te verseker dat hierdie fase van die projek korrek voltooi word, het Sebilo onafhanklike spesialis konsultante aangestel om die OIS te voltooi en om 'n Omgewings Bestuur Plan (OBP) te ontwikkel. Die OBP sal deur die Perth myn geïmplimenteer word, nadat dit deur die Regering goedgekeur is, om te verseker dat negatiewe impakte geelimineer of geminimiseer word en dat klem op positiewe impakte gelê word. U kommentaar is dus baie waardevol tot die projek en sal deur die OBP-aangespreek word. Die spesialis konsultante wat aan die projek gewerk het, is vandag teenwoordig. Bespreek gerus u vrae met hulle. Ons het ook plakkate en informasie dokumente beskikbaar gestel vandag, sodat u die OIS in meer detail met die spesialiste kan bespreek. Om te verseker dat u kommentaar in die OBP-aangespreek word, versoek ons u asseblief om u vrae en kommentaar op die aangehegde kommentaar blad op te skryf. Dit sal verseker dat u kommentaar ordentlik aangespreek word in die dokumente wat by die Regering ingehandig gaan word. 'n Voorlopige OBP sal aan u beskikbaar gestel word teen Mei maand vir kommentaar. U sal 'n 30-dae periode gegee word om kommentaar te lewer. 'n Uitgedrukte kopie van die OBP sal by die Hotazel Biblioteek beskikbaar gestel word. Elektroniese kopieë sal ook beskikbaar gestel word, op versoek, via die Internet. Indien u 'n elektroniese of uitgedrukte kopie van die OBP sou wou ontvang, dui asseblief so aan op die kommentaar blad, sodat ons die nodige reëlings kan tref.

Tydlyn vir die finaliseering van die projek.

Die tydlyn vir die projek, word deur die Departement van Minerale Hulpbronne (DMH) vasgestel. Volgens hulle instruksies, sal die projek soos volg voltooi word:

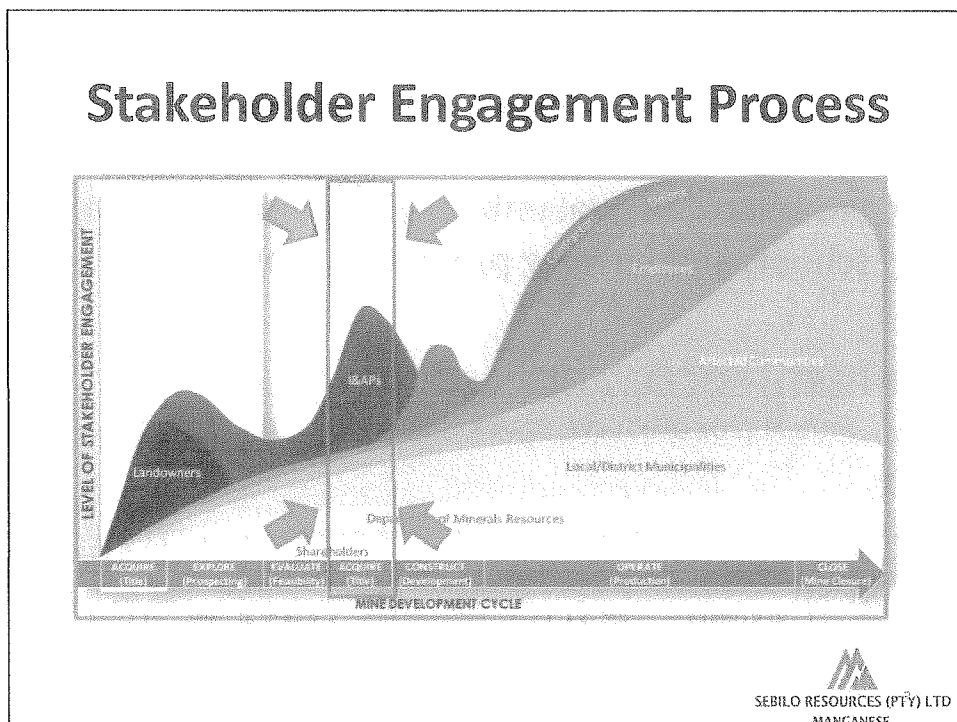

- Aanvaarding van die Mynreg Aansoek: 11 November 2011
- Inhandiging van die Bestek Verslag: 12 Desember 2011
- OIS Fase van die projek: Januarie – April 2012
- Inhandiging van die voorlopige OBP aan die DMH: 11 Mei 2012
- Stel die voorlopige OBP beskikbaar vir GGP kommentaar: 11 Mei - 11 Junie 2012
- Finalisering van die aansoek deur die DMH: teen 12 November 2012

Baie dankie vir u deelname aan die projek.

Die Sebilo Span

Directors: T.B. Louw, A.S. Louw, A.S. Mac Farlane, D.E. Africa

171 Wessels Street, Rossouw Park, 7

Expected Benefits

- Contributions to the local communities and economy can be categorised under 4 distinct yet interrelated areas viz:
 - Poverty alleviation
 - Job creation
 - Local procurement
 - Economic growth

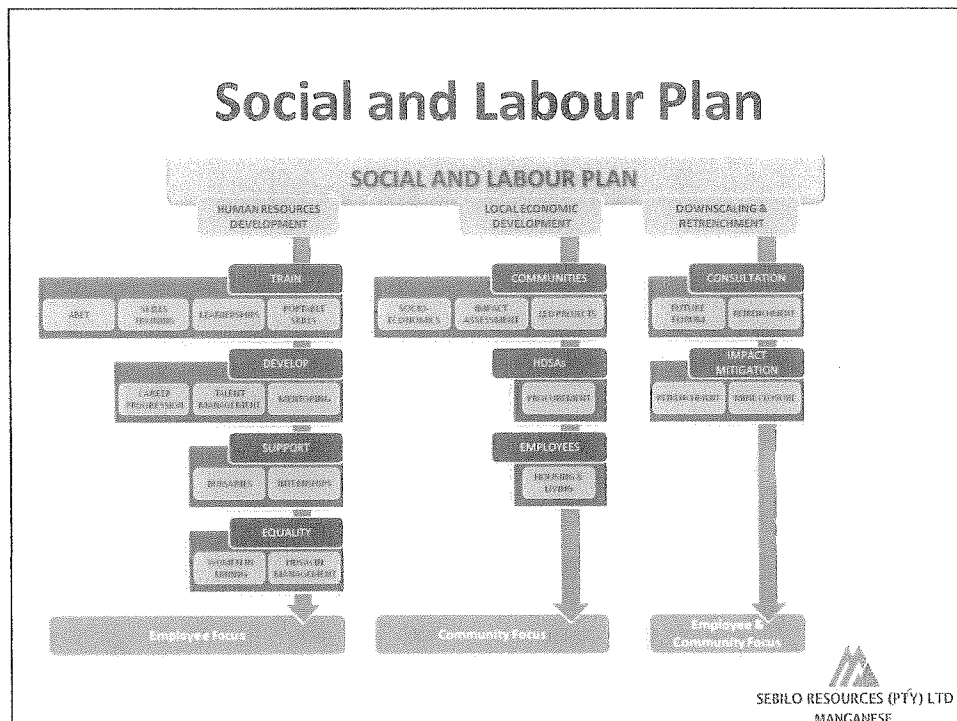

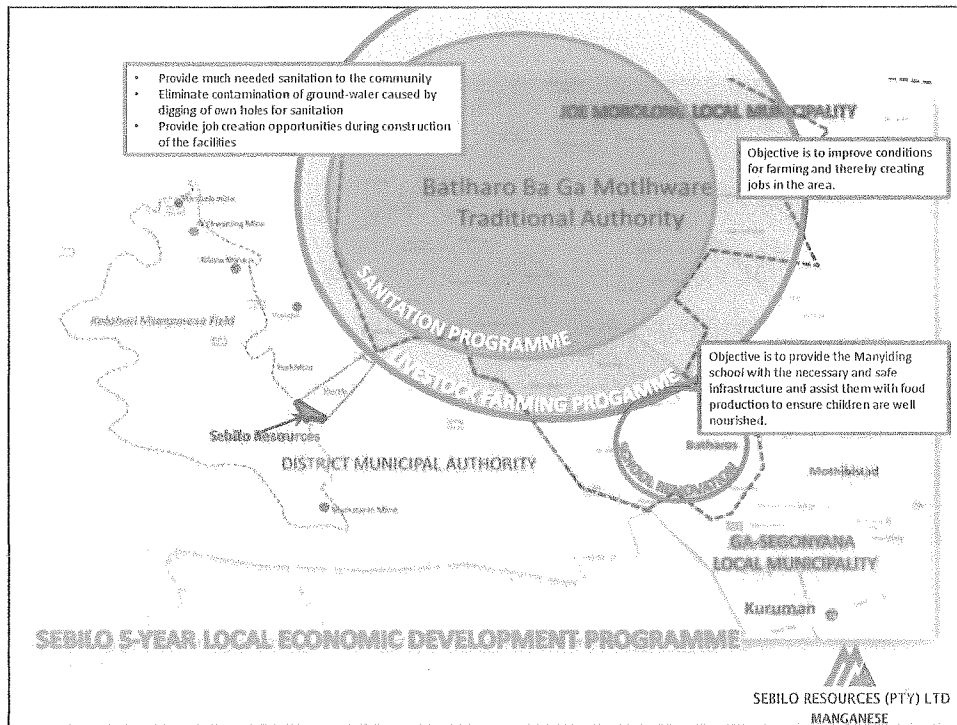

3

Poverty Alleviation

- Provision of social infrastructure, job creation, schools and farming programs through:
 - PERTH SOCIAL AND LABOUR PLAN
 - LOCAL ECONOMIC DEVELOPMENT (LED) PROGRAMME
 - PERTH CORPORATE SOCIAL RESPONSIBILITY (CSI)

4

Job Creation

- Employ approximately 130 full-time people
- Skills development for employees
- Opportunities for learnerships and bursaries
- Stimulate job creation through supply chain management (indirect job creation)

Local Procurement

- Establishment and development of SMMEs;
- Mentoring and support program for SMMEs;
- Create secondary industries;
- Influence local spending power;
- Job creation; and
- Support to local contractors and suppliers.

Economic Growth

- Contribution to the fiscal through property taxes and rates
- Assist Local Government with the capacity to provide infrastructure and services to the community
- Influence development of mining related industries

9

Broad-Based Shareholding

- Black owned enterprise
- Shareholders include amongst others:
 - Traditional authority (community)
 - Local empowerment groups
 - Local Women groups
 - Local HDSA individuals
- Locally owned mining company!

10

Socio-economic Impact of Perth Mine

✓
Poverty alleviation

Job creation

Local procurement

Economic growth

MINIMAL IMPACT

✗
Possible influx of job seekers

Impact on landowner/farming

Increase in traffic

Pressure on municipal services

MINIMAL IMPACT

I would like to put it on record that Tsineng community has submitted an application before Dec 1998 for a claim of farm named Perch and it is appearing in the second phase of Tsineng claim. My view is therefore that the consultation processes was not adequately done with the claimant. No detailed consultation or considerations have been done with regard to checking whether there is any possible claimant for the land intended to be mined. Tsineng community are the primary beneficiaries of Perch farm and would not rest until our voices are heard and attended to. We have lost the land rights for Perch and would also not attack and do nothing while democratic SA also does not see anything significant to

Thank you for your participation.

That Tsineng doors are open to any business community to work on a...

We are affected area (Tsineng). How are going to benefit from mining, because we are the nearest land. We as Tsineng community we don't have any representative in Bathavon Trust, We want to know why and how not included. The farm Pertle its our claimant on phase 3, We also want to be shareholders, because lately we will own that land. We need meeting with Sebilo to clarify some issues.

Thank you for your participation.

Sebilo Mining Resources has embarked on a Open Public Participation for the Operation of Perth Mine. It is an honour to be involved in this process, all mining activity process, mining operation, the ground water protocol, soil protection guidelines were thoroughly explained and the zero impact and mitigation on pollution and contamination and I am comfortable that due diligence was put into this project.

Sebilo Resources is the only mining company to offer Batharo Ba-ga Mollhware of Kgosi TOTO a share into their company and it promises to do more for our community and ensure that proper Social Labour Plans in terms of commitment as per Mining licence agreement. I therefore support this initiative that a Black mining company be allowed

Thank you for your participation.

B.L. 21/04/2012.

to operate unhindered at Perth Mine.

SEBILO MINING RESOURCES WILL BRING AN IMPACT INTO THE LIVES OF BLACK THE COMMUNITIES AROUND THE KURUMAN AREA WHO HAVE BEEN DISADVANTAGED FOR SO MANY YEARS DUE TO APARTHEID.

THE COMMUNITIES NEED TO BE DEVELOPED, THAT BEING THE CASE, CLIMATE'S NEED TO BE IMPROVED. PEOPLE NEED FARMS FOR CATTLE GRADING AS KURUMAN IS BIG CATTLE AREA. THERE IS AN EXTREMELY BIG FARM IRRIGATION AREA AT MAMPUNG FALLING UNDER CHIEF TOTO'S JURISDICTION - THIS AREA IS JUST OPEN WITHOUT FENCE BECAUSE THE LANDLORDS DO NOT HAVE MONEY TO FENCE THE AREA SO AS TO HELP THEMSELVES FEED THEIR CHILDREN. SEBILO RESOURCES IS THE ONLY SOLUTION TO COME TO THESE PEOPLE'S AREA. WE NEED A DUMPING SITE SOMEWHERE AT BATHURAS AREA. WE NEED A HUGE PETROL STATION OWNED BY THE BATHURAS PEOPLE. I THERE SUPPORT WHAT SEBILO RESOURCES IS PLANNING TO DO.

Thank you for your participation.

We people from Tsamey, what will we benefit? When the mine starts to operate? Meaning after selling the mineral what will we get from Perth Mining Manganese? According to my side I think it will be better if they go to our village and see what are our needs? including infrastructures! and it will be better when they start to live at our place because of there are many people who are not working. Some of them it's because they are not educated so the most of them can do general work. There are others who matriculated tried to apply for bursaries but they were not answered so it will be better if you offer them bursaries and learnerships. I SO HOPE THAT MY COMMENT IS YOUR CONCERN

Thank you for your participation.

I suggested that SEBILO'S MINE TO ESTABLISH A SKILLED DEVELOPMENT CAMPUS AT TSINENG VILLAGE.

I ALSO SUGGESTED THAT THE COMPANY SHOULD PRIORITISE TSINENG VILLAGE AS PILOT DEVELOPMENT PROJECT DUE TO POOR SERVICE DELIVERY FROM OUR MUNICIPALITY.

WE THE REQUEST THAT COMMUNITY OF TSINENG BE PART OF TRUSTEES OF COMPANY.

TOGETHER WE CAN REDUCE THE NUMBER OF UNEMPLOYMENT & ILLITERATE PEOPLE.

Thank you for your participation.

One applauds the initiative to create jobs for the unemployed. It must be registered on record that as Tsinyeng Community we want to be given full recognition since this land it is part of our claim. Regard must be had to the fact that we would like to have full representation in all relevant management and committee inles alia, trust and board. I want to further put it on record that we are not subjects of Batharos Chieftaincy we will in future seek our independence. We believe in the Community consultation, we represent men and women who can't read and write.

Thank you for your participation.

Name			
Farm and Portion No / Organisatie			
Postal Address			
Telephone Number		FaxNumber	
Cell PhoneNumber		E-mail Address	

Please provide your comments on the project here. Feel free to add additional pages, if required

WE ALS APPEAR APPEAL TO SEBILCO TO
 ARRANGE THE MEETING WITH TRINEMU CPA
 IN THE INTERNS OF SOCIAL LABOUR PLAN
 AND BAWANOSIWARE TRUST AS WE FEEL
 THAT WE ARE NOT REPRESENTED AND
 ALSO INFORMATION SHOULD FLOW TO US AS
 AN AFFECTED PARTY WE DON'T HAVE
 SPORT FACILITIES, CRECHES, FET, LIBRARIES, ACCES
 ROAD, WATER FOR OUR LIVESTOCK.

THAT IS MY COMMENTS.

OBONYWE THIBOSANY
