Glossary of terms:

Construction Phase: The activities pertaining to the preparation for and the physical

construction of the proposed development.

Contractor: Persons/organisations contracted by Eskom to carry out parts of the work for the

proposed development.

Decommissioning: Means to take out of active service permanently or dismantle partly or

wholly, or closure of a facility to the extent that it cannot be readily re-commissioned.

Engineer (E) / Project Manager (PM): Person/organisation appointed by the Contractor to

oversee the work of all consultants, sub-developers, contractors, residents and visitors.

Environment: NEMA defines "environment" as "the surroundings within which humans exist and

that are made up of the land, water and atmosphere of the earth; micro-organisms, plant and animal life; any interrelationships among and between them and the physical, chemical aesthetic

and cultural properties and conditions that influence human health and well-being".

Environmental Control Officer (ECO): Person/organisation appointed by the Contractor who

will provide direction to the Project Manager concerning the activities within the Construction

Zone, and who will be responsible for conducting the environmental audit of the project during the construction phase of the project according to the provisions of the Environmental Management

Plan.

Environmental Management Programme (EMPr): The EMPr is a detailed plan for the

implementation of the mitigation measures to minimise negative environmental impacts during the

life-cycle of a project. The EMPr contributes to the preparation of the contract documentation by developing clauses to which the contractor must adhere for the protection of the environment.

The EMPR specifies how the construction of the project is to be carried out and includes the

actions required for the Post-Construction Phase to ensure that all the environmental impacts are

managed for the duration of the project's life-cycle.

Operational Phase (Post Construction): The period following the Construction Phase, during

which the proposed development will be operational.

Pre-Construction Phase: The period prior to commencement of the Construction Phase, during

which various activities associated with the preparation for the Construction Phase will be

undertaken.

**ESKOM HOLDINGS SOC LIMITED** 

**Rehabilitation:** Rehabilitation is defined as the return of a disturbed area to a state which approximates the state (where possible) which it was in before disruption. Rehabilitation for the purposes of this specification is aimed at post-reinstatement re-vegetation of a disturbed area and the insurance of a stable land surface. Re-vegetation should aim to accelerate the natural succession processes so that the plant community develops in the desired way, i.e. promote rapid vegetation establishment.

**Site Manager:** The person, representing the Contractor, responsible for all the Contractor's activities on the site including supervision of the construction staff and activities associated with the Construction Phase. The Site Manager will liaise with the Project Manager in order to ensure that the project is conducted in accordance with the Environmental Management Programme.

# PROPOSED CONSTRUCTION OF 132KV POWER LINE AND ASSOCIATED INFRASTRUCTURE FOR THE REDSTONE SOLAR THERMAL ENERGY PLANT IN THE NORTHERN CAPE PROVINCE

## DRAFT ENVIRONMENTAL MANAGEMENT PROGRAMME

#### 1 INTRODUCTION

Eskom Holdings SOC Limited (hereafter referred to as Eskom) intends to develop a 132kV Power line for SolarReserve South Africa's (hereafter referred to as SolarReserve) Redstone Solar Thermal Energy Power Plant. Eskom intends to develop the 132kV (kilovolt) overhead power line, associated infrastructure and switchyard to connect the proposed Redstone Solar Thermal Energy Plant that will be constructed on the Humansrus farm (remainder of the Farm 469) onto the Eskom grid. The proposed power line will be erected from the Redstone Solar Thermal Energy Plant to Silverstreams Substation, near Lime Acres. Two solar photovoltaic (PV) power plants are also being proposed on the Humansrus farm. In this regard, the proposed switchyards associated with each PV substation may need to be extended to accommodate the new proposed 132kV power line. In addition, a switchyard will need to be constructed on the Humansrus farm. The exact location of the proposed switchyard will be determined according to the layout of the Redstone Solar Thermal Energy Plant which was informed by the Environmental Impact Assessment (EIA) and environmental sensitivity mapping analysis undertake by WorleyParsons for the proposed solar plant.

As such, this proposed project consists primarily of the construction of a 132kV power line and the associated infrastructure in order to connect the Redstone Solar Thermal Energy Plant onto the national grid.

It should be noted that Eskom will be owner of the 132kV power line and associated infrastructure (including a switchyard). An Eskom appointed vendor will also be responsible for constructing the power line and associated infrastructure. In addition, Eskom will maintain the power line and associated infrastructure during the operational phase. As such, Eskom will be responsible for all activities related to the various project phases (preconstruction, construction, operation and decommissioning).

**ESKOM HOLDINGS SOC LIMITED** 

This EMPr has been compiled in line with the recommendations from the Basic Assessment (BA) being undertaken for the proposed project, as well as from issues identified by SiVEST Environmental Division. This EMPr will be updated with the conditions of the Environmental Authorisation (if approved) and re-submitted to the DEA for final approval prior to the commencement of construction on the project site. Additional details will also be provided by the appointed contractors and engineers once the detailed design has been completed.

## 1.1 Overview of the proposed project

The proposed project consists of the following main activities:

- Construct 1 x 132kV overhead power line from the proposed Switchyard to Silverstreams Substation, near Lime Acres.
- Construct 1 x switchyard on Humansrus farm (located outside the solarfield).
- Construct 1 x 132kV overhead power line from the proposed Switchyard to each PV Power Plant switching station.
- Extension of the 132kV busbar in the PV Power Plant switching stations.
- Install 1 x 132kV feeder bay in the PV Power Plant switching stations.
- Install 3 x 132kV feeder bays in Siverstreams Substation.
- Create a loop-in configuration to Silverstreams Substation by reconfiguring the existing
   Olien Karats 132kV power line currently crossing Silverstreams Substation.
- Construct a 1x120MVA 11/132kV step-up substation with 2 x 132kV feeder bays at the proposed the Redstone Solar Thermal Energy Plant.
- Construction of an access track along the power line servitude.
- Control rooms, security systems, etc
- Establishment of associated infrastructure as required by Eskom.

The power line will consist of a series of towers located approximately 100-200m apart, depending on the terrain and soil conditions. The exact tower type to be used will be determined (based on load and other calculations) during the final design stages of the power line. It is however likely that the bird friendly Single Steel Pole tower type (e.g. ESKOM D-DT 7641, D-DT 7649) will be used in combination with the Steel Lattice towers at bend points and where greater distances need to be spanned. The Single Steel Pole tower type is between 18m and 25m in height and the Steel Lattice tower type is between 25m and 29m in height. A photograph of the Single Steel Pole tower type is included in Figure 1 below.

Figure 1: Single Steel Pole Tower Type

The exact location of the towers will also be determined during the final design stages of the power line.

Based on the findings of the specialist studies and feedback received from the public participation process **alternative 1A** was chosen as the preferred route corridor for the proposed 132kV power line required to connect Redstone Solar Thermal Energy Plant with Silverstreams Substation. The preferred corridor is indicated in Figure 2 below.

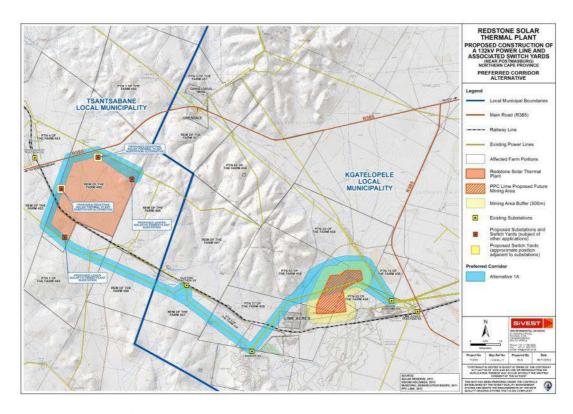

Figure 2: Preferred Corridor Alternative Map

The approximate 500m wide corridor has been proposed to allow flexibility when determining the final route alignment, however only a 31m wide servitude would be required for the proposed 132kV power line. As such, the 31m wide servitude would be positioned within the 500m wide corridor.

A detailed process was followed in the BA, which included thorough consultation with landowners, residents as well as key stakeholders. Two route alternatives were assessed and **alternative 1A** (as depicted above) was identified as the preferred route.

The corridor alternative crosses various biophysical and social features, which may or may not be affected by the proposed power line. Detailed mitigation measures have been developed for the routes based on the specialist studies that were conducted for the project. The following studies were conducted for the proposed project:

- Biodiversity (fauna and flora)
- Avifauna
- Surface water
- Agricultural potential and soil
- Heritage

#### ESKOM HOLDINGS SOC LIMITED

prepared by: SiVEST

Redstone Proposed Power Line and Associated Infrastructure - Draft EMPr Revision No. 2

Visual

Social

Geotechnical

This EMPr has been compiled to ensure good environmental compliance during the construction of the power line and associated infrastructure. The EMPr will be strictly implemented during the construction phase of the project and will be consulted regularly during the lifespan of the project until decommissioning.

1.2 Project Responsibilities

Several professionals will form part of the construction team. The most important from an environmental perspective are the Project Manager, the Environmental Control Officer (ECO) and the contractor.

The Project Manager is responsible for the implementation of the EMPr on the site during the preconstruction and construction phases of the project.

The ECO is responsible for monitoring the implementation of the EMPr during the design, preconstruction and construction phases of the project.

The contractor is responsible for abiding by the mitigation measures of the EMPr which are implemented by the Project Manager during the construction phase.

The contractor is responsible for the implementation of the EMPr during the operational and decommissioning phases of the project. It is unlikely that the proposed substation and power line will be decommissioned.

1.2.1 Project manager

The Project Manager is responsible for overall management of project and EMPr implementation. The following tasks will fall within his / her responsibilities:

 Be aware of the findings and conclusions of the Basic Assessment and the conditions stated within the environmental authorisation (EA).

Be familiar with the recommendations and mitigation measures of this EMPr, and implement these measures.

Monitor site activities on a daily basis for compliance.

**ESKOM HOLDINGS SOC LIMITED** 

- Conduct internal audits of the construction site against the EMPr.
- Confine the construction site to the demarcated area.
- Rectify transgressions through the implementation of corrective action.

#### 1.2.2 Environmental Control Officer

The Environmental Control Officer is responsible for the implementation of the EMPr during the construction phase and liaison between the Contractor and the Landowners. The ECO will liaise and report to the Contractor, landowners and authorities. The following tasks will fall within his / her responsibilities:

- Be aware of the findings and conclusions of the Basic Assessment and the conditions stated within the environmental authorisation.
- Be familiar with the recommendations and mitigation measures of this EMPr.
- Conduct monthly audits of the construction site according to the EMPr and EA.
- Educate the construction team about the management measures of the EMPr and EA.
- Regular liaison with the construction team and the project leader.
- Recommend corrective action for any environmental non-compliance incidents on the construction site.
- Compile a regular report highlighting any non-compliance issues as well as good compliance with the EMPr.
- All negotiations for any reason shall be between the ECO, the affected parties, and the Contractor. No verbal agreements shall be made. All agreements shall be recorded in writing and all parties shall co-sign the documentation.
- The affected parties shall always be kept informed about any changes to the construction programme should they be involved. If the ECO is not on site the Contractor should keep the affected parties informed. The contact numbers of the Contractor and the ECO shall be made available to the affected parties. This will ensure open channels of communication and prompt response to queries and claims.

#### 1.2.3 Contractor

The contractor is responsible for the implementation and compliance with recommendations and conditions of the EMPr.

- Ensure compliance with the EMPr at all times during construction
- Maintain an environmental register which keeps a record of all incidents which occur on the site during construction. These incidents include:
  - o Public involvement / complaints

ESKOM HOLDINGS SOC LIMITED

- Health and safety incidents
- o Hazardous materials stored on site
- o Non compliance incidents

The Contractor shall under no circumstances interfere with the property of landowners or nearby communities.

## 1.2.4 Proponent

Although SolarReserve South Africa is the Proponent, Eskom will be responsible for constructing the power line and substation and therefor they will assume ultimate responsibility for the project and all activities related to the construction process i.e. non compliance, penalties etc.

## 1.2.5 The Environmental Liaison Officer (ELO)

The ELO will be appointed by the Contractor to implement the EMPr and monitor activities on site on a daily basis. The ELO will be the ECO's representative on the site and will report back on all audit trips. The ELO must report any major incidents immediately to the ECO.

Table 1: Responsibilities

Function	Responsibility
Project Manager	Overall management of project and EMPr implementation
(PM) Eskom	
Senior Site Supervisor/	<ul> <li>Oversee site works, liaison with Contractor (ELO), PM</li> </ul>
Contract Manager	and ECO
(CM) Eskom	
Environmental Control Officer	■ Implementation of EMPr, and monitoring of compliance
(ECO) (independent) – Appointed	with the requirements of the CEMP.
by Eskom	■ Liaison between Eskom, Contractor and Landowners,
	including negotiation of access plan.
	■ Maintains close communication with the ELO, and
	oversees the ELO's environmental control, remediation
	and rehabilitation actions (including checking that the
	complaints register and register of environmental
	incidents are being maintained by the ELO).
	Environmental awareness training of the contractor and
	select main construction staff
	Settlement of damage claims and completion of Damage

**ESKOM HOLDINGS SOC LIMITED**

#### 1.2.6 Environmental Audits

Table 3 below provides an outline of the generic process involved in the auditing process. It briefly describes the activities of the process initially beginning with defining the objectives and scope of the auditing process as well as the responsibilities of the various parties. The procedure for the auditing process is explained through to the production of audit findings and the compliance (or non-compliance) of the audit findings.

The Independent auditor will undertake the following:

- Conduct audits
- Submit audit reports to ECO and relevant authority
- Engage specialist sub consultants when required.

Table 3: Example of Procedure for Conducting Audits

Objective	To ensure that formal audits of the EMPr are
	scheduled and performed so as to verify
	compliance with the requirements of the EMPr.
Scope	This procedure describes the sequence of
	events required to perform a compliance audit
	and the verification of implemented corrective

**ESKOM HOLDINGS SOC LIMITED**

Redstone Proposed Power Line and Associated Infrastructure - Draft EMPr

Revision No. 2 22 February 2013

Page 17

	action
Responsibilities	The ECO or a person authorised and appointed by him, is responsible for the maintenance of the Environmental Audit System
	The ECO is responsible for the scheduling and execution of the audit, as well as the verification of the implementation of corrective action. At his/her discretion, this authority may be delegated to responsible company personnel or to an independent Environmental Auditing Authority to perform the audit on his/her behalf.
	Auditors shall have no direct responsibility in the area/system being audited.  They will be trained in techniques for auditing environmental systems.
	The head of department (HOD)/supervisor for an area/system to be audited (or a responsible person nominated by him/her) will assist the audit team in the execution of the audit. The HOD will also be responsible for timely corrective actions based on the findings of the audit.
Procedure	
Planning the audit	The ECO or his authorised delegate, shall plan the audit of a particular environmental area or system as follows:  He shall inform, in writing, the division to be audited of the intention to conduct an audit at least two weeks prior to the audit. This notification should include the audit objective, scope and duration and any assistance required from the division.  On completion of the audit, an audit findings sheet shall be prepared and

	submitted to company senior
	management as well as to the
	Department/section, which was
	audited.
	■ Corrective actions shall be
	implemented, within eight weeks after
	the audit, where possible.
Audit External Schedule	The external environmental audits will be
	scheduled annually.
Audit Check List	Auditing will be performed by collecting
	evidence for verification through interviews,
	relevant documentation and observation of
	activities and conditions. Instances of non-
	conformity to EMPr criteria should be
	recorded. An environmental audit checklist can
	be used as a guide to address all relevant
	issues.
Audit Compliance	See below.
Audit Findings and Reporting of non-	The audit team shall review all evidence of
compliances	their audit findings to decide on non-
	compliance. Audit findings of non-compliance
	must be documented and supported by
	evidence in the Audit Findings Report.
	The non-compliance findings will be
	communicated to the Project Manager and his
	representatives during an audit feedback
	meeting.
	The person responsible for corrective action,
	will sign the audit findings report sheet to
	indicate acceptance and commitment to the
	required corrective action

## 1.3 Layout of Environmental Management Programme

#### 1.3.1 Introduction

This EMPr addresses both generic issues as well as specific issues. The generic and specific issues in the EMPrs are separated into different phases. Each phase has specific issues unique to that period of the development and operation of the power lines, substations and associated infrastructure. The impact is identified and given a brief description. The phases of the development are then identified as below:

- Pre-construction (Site Establishment)
- Construction (including associated rehabilitation of affected environment)
- Operation Phase
- Decommissioning of substations

This EMPr seeks to manage and keep to a minimum the negative impacts of a development and at the same time, enhance the positive and beneficial impacts.

The EMPr specifies mitigation measures for the following environmental aspects:

## 1.3.2 Pre-construction (Site establishment)

- Site preparation
- Consultation
- Site clearing

#### 1.3.3 Construction

- Construction Camp
- Construction Traffic and Access
- Environmental Education and Training
- Soils and Geology
- Erosion Control
- Water Use and Quality
- Surface and Groundwater
- Waste Management
- Flora

#### **ESKOM HOLDINGS SOC LIMITED**

- Fauna
- Air Pollution
- Noise and Vibrations
- Energy use
- Climate Change
- Agricultural Potential
- Employment
- Occupational Health and Safety
- Security
- Social Environment
- Community Engagement
- Visual Impact
- Cultural and Heritage Artefacts

## 1.3.4 Operation

- Construction Site Decommissioning
- Operation and Maintenance
- Surface and Groundwater
- Air Quality
- Noise
- Biodiversity
- Waste Management
- Health and Safety
- Visual Impact

## 1.3.5 Decommissioning Phase

- Ongoing Stakeholder involvement
- Community health and safety
- Waste Management
- Surface and Groundwater
- Biodiversity
- Air pollution

## 1.4 Objectives of an EMPr

The objectives of this EMPr are to:

- Identify a range of mitigation measures which could reduce and mitigate the potential impacts to minimal or insignificant levels.
- To identify measures that could optimize beneficial impacts.
- To create management structures that address the concerns and complaints of I&APs with regards to the development.
- To establish a method of monitoring and auditing environmental management practices during all phases of development.
- Ensure that the construction and operational phases of the project continues within the principles of Integrated Environmental Management and Environmental Management System (EMS) ISO 14001 Principles.
- Detail specific actions deemed necessary to assist in mitigating the environmental impact of the project.
- Ensure that the safety recommendations are complied with.
- Propose mechanisms for monitoring compliance with the EMPr and reporting thereon.
- Specify time periods within which the measures contemplated in the environmental management plan must be implemented, where appropriate.

The EMPr Seeks to highlight the following:

- Avoiding impacts by not performing certain actions.
- Minimising impacts by limiting aspects of an action.
- Rectifying impacts through rehabilitation, restoration, etc of the affected environment.
- Compensating for impacts by providing substitute resources or environments.
- Minimising impacts by optimising processes, structural elements and other design features.
- Provide ongoing monitoring and management of environmental impacts of a development and documenting of any digressions /good performances.

The EMPr is a legally binding document that all parties involved in the project must be made aware of.

#### 1.4.1 Environmental monitoring

A monitoring programme will be implemented for the duration of the construction phase of the project. This programme will include:

ESKOM HOLDINGS SOC LIMITED

prepared by: SiVEST

Redstone Proposed Power Line and Associated Infrastructure - Draft EMPr

- Monthly audits will be conducted by the Environmental Control Officer, which are according to the EMPr and ROD's conditions. These audits can be conducted randomly and do not require prior arrangement with the project manager.
- Compilation of an audit report with a rating of the compliance with the EMPr. This report will be submitted to the relevant authorities.

The ECO shall keep a photographic record of any damage to areas outside the demarcated site area. The date, time of damage, type of damage and reason for the damage shall be recorded in full to ensure the responsible party is held liable. All claims for compensation emanating from damage should be directed to the ECO for appraisal. A register shall be kept of all complaints from the landowner or community (Annexure A). All complaints / claims shall be handled immediately to ensure timeous rectification / payment by the responsible party.

A copy of the EMPr must be kept on site during the construction phase. The EMPr will be made binding on all contractors operating on the site and must be included within the Contractual Clauses. Those responsible for environmental damage must pay the repair costs both to the environment and human health and the preventative measures to reduce or prevent further pollution and/or environmental damage (the polluter pays principle).

## 1.5 Compliance with the EMPr

The Contractor is deemed not to have complied with the EMPr if:

- Within the boundaries of the site, site extensions and access roads there is evidence of contravention of clauses;
- If environmental damage ensues due to negligence;
- The contractor fails to comply with corrective or other instructions issued by the ECO or Authorities within a specified time; or
- The Contractor fails to respond adequately to complaints from the public.

Eskom is deemed not to have complied with the EMPr if:

- Within the boundaries of the site there is evidence of contravention of clauses;
- If environmental damage ensues due to negligence; or
- They fail to respond adequately to complaints from the public.

#### 1.5.1 Method Statements

It is standard practice that method statements for various construction-related activities be produced by the contractor's Environmental Liaison Officer (ELO). These method statements will outline in detail how various activities should be undertaken so as not to cause any environmental damage / impacts. It is very important that these method statements be signed off by the ECO. Any changes to the method statements that are made during the construction period must be approved by the ECO. Method statements must be kept on site as part of the official environmental documentation.

### 1.5.2 Penalties for non- compliance

Application of a penalty clause to the contractor will apply for incidents of non-compliance. The penalty imposed will be per incident and will be deducted from the contractor's monthly payment certificate. Unless stated otherwise in the project specification, the penalties imposed per incident or violation will be pre-determined and agreed upon between the Contractor and the ECO. These will vary in amount based upon the severity and/or regularity of the incidence occurring.

The ECO in consultation and with the approval of the Senior Site Supervisor shall issue spot fines if the Contractor infringes specifications of the EMPr and EA. The Contractor shall be advised in writing of the nature of the infringement and the amount of the spot fine. The Contractor shall be liable for the fine and it is his responsibility to recover the fine from the relevant employee. The Contractor (through the Environmental Officer) shall also take the necessary steps (e.g. training) to prevent a recurrence of the infringement. The Contractor is also advised that the imposition of spot fines does not replace any legal proceedings the authorities, landowners and/or members of the public may institute against the Contractor. Spot fines for minor offences shall be between R500.00 and R5 000.00, depending upon the severity of the infringement. The decision on how much to impose will be made by the ECO and will be final. In addition to the spot fine, the Contractor shall be required to make good any damage caused as a result of the infringement at his own expense. A preliminary list of infringements for which spot fines will be imposed is as follows:

- Using areas outside the working areas without permission/accessing "no-go areas";
- Clearing and/or leveling area outside of the working areas:
- Littering of the site and surrounds;
- Burying/burning waste on site and surrounds;
- The undertaking of informal ablutions
- Making fires on site;
- Spillage onto the ground or water bodies of oil, diesel, or any other potential pollutants;

**ESKOM HOLDINGS SOC LIMITED** 

prepared by: SiVEST

Redstone Proposed Power Line and Associated Infrastructure - Draft EMPr Revision No. 2

- Picking/damaging plant material, especially that from the residual areas of natural bush on the site;
- Damaging/killing wild or domestic animals/birds;
- Discharging effluent and/or stormwater onto the ground or into surface water;
- Repeated contravention of the specification or failure to comply with instruction

In this context the ECO shall retain records or all fines issued. Monies for the spot fines will be deducted from the Contractors monthly certificate.

The Senior Site Supervisor, on recommendation from the ECO, may also order the Contractor to suspend part or all the works if the Contractor repeatedly causes damage to the environment by not adhering to the EMPr (i.e. more than 3 cases of infringements). The suspension will be enforced until such time as the offending actions, procedure or equipment is corrected. No extension of time will be granted for such delays and all costs will be borne by the Contractor.

#### 1.5.3 Training and awareness

Training of construction workers

The Construction Workers must receive basic training in environmental awareness, including the storage and handling of hazardous substances, minimisation of disturbance to sensitive areas, management of waste, and prevention of water pollution. They must be informed of how to recognise historical / archaeological artefacts that may be uncovered. They must also be appraised of the EMPr's requirements.

Contractor performance

The Contractor must ensure that the conditions of the EMPr are adhered to. Should the Contractor require clarity on any aspect of the EMPr the Contractor must contact the Environmental Control Officer for advice.

## 1.6 Applicable Legislation, Development Strategies and Guidelines

The following legislation applies:

- Atmospheric Pollution Prevention Act (Act No. 45 of 1965)
- Conservation of Agricultural Resources Act (Act No 43 of 1983)
- Constitution of South Africa (Act No. 108 of 1996)
- Environment Conservation Act (Act No 73 of 1989)

**ESKOM HOLDINGS SOC LIMITED** 

- Hazardous Substances Act (Act No. 15 of 1973)
- National Environmental Management Act (Act No 107 of 1998) NEMA
- National Environmental Management: Air Quality Act (Act No. 39 of 2004)
- National Environmental Management: Biodiversity Act (Act No. 10 of 2004)
- National Forests Act (Act No 84 of 1998)
- National Heritage Resources Act (Act No 25 of 1999)
- National Veld and Forest Fire Act (Act No 101 of 1998)
- National Water Act (Act No 36 of 1998)
- Northern Cape Nature Conservation Act (Act No 9 of 2009)
- Occupational Health and Safety Act (Act No 85 of 1993)
- Protected species provincial ordinances

## 2 MITIGATION GUIDELINES

#### 2.1 Introduction

Mitigation guidelines are addressed through four phases namely Pre-construction (Site Establishment) Phase; Construction Phase (and associated rehabilitation of affected environment); Operational Phase (Post-Construction) as well as Decommissioning Phase. Each phase has specific issues unique to that period of the development and operation of the proposed infrastructure. The impact is identified and given a brief description. The four phases of the development are then identified as below:

- Pre-construction
- Construction
- Post Construction
- Decommissioning

## 2.2 Pre Construction Phase

## 2.2.1 Site preparation

Table 4: Site preparation

IMPACT	SITE PREPARATION	RESPONSIBILITY
	This section deals with the preparation of the site	'
	and actions that need to be implemented before	
	construction commences	
PHASE	SITE ESTABLISHMENT	MC, ELO, ECO
ENVIRONMENTA	L MANAGEMENT PROGRAMME	
MITIGATION /	Specialist Investigations	
METHOD	1. It is advisable that a detailed walk down by the	
STATEMENT	faunal and floral specialist be undertaken prior to	
	construction to survey the area for any RDL	
	species and to inform the final tower locations prior	
	to the finalisation of tower positions. Once the tower	
	positions are pegged, a floral survey should be	
	undertaken during the flowering season to identify	
	any potentially affected RDL floral species that	
	should be removed and rescued.	
	2. It is advisable that a walk down by the avifaunal	

**ESKOM HOLDINGS SOC LIMITED** 

IMPACT	SITE PREPARATION	RESPONSIBILITY
	This section deals with the preparation of the site	
	and actions that need to be implemented before	
	construction commences	
PHASE	SITE ESTABLISHMENT	MC, ELO, ECO
ENVIRONMENTA	L MANAGEMENT PROGRAMME	
	specialist be undertaken to identify the spans that	
	will require mitigation devices to be installed, once	
	the exact routing is chosen and the tower positions	
	are pegged.	
	3. It is advisable that a walk down be undertaken by	
	the heritage specialist prior to finalising the tower	
	positions and commencing with construction. This	
	will be done in order to mitigate and manage the	
	impact of the proposed project on any heritage	
	resources.	
	4. Where there are coastal sediments, or marine or	
	river terraces and in potentially fossiliferous	
	superficial deposits, the developer must ensure that	
	a professional Palaeontological Desk Top study is	
	undertaken to assess whether or not the	
	development will impact upon palaeontological	
	resources.	
	5. It is advisable that a walk down be undertaken by	
	the surface water specialist to confirm the presence	
	of the small wetland and relict drainage channel	
	within the eastern part of the preferred corridor (in	
	the corridor extension area).	
	6. Detailed geotechnical investigations should be	
	undertaken along the final corridor alignment at the	
	pylon locations and at the final switchyard location	
	to prove the founding conditions and assess the	
	dolomite stability.	
	Appoint construction team and suitable manager	
	7. Appoint an Environmental Control Officer and	
	Environmental Liaison Officer. The ELO is	
	appointed on the contractor's behalf while the ECO	
	is appointed on the proponent's behalf.	
	8. The Contractor must draw up method statements	
	'	

IMPACT	SITE PREPARATION	RESPONSIBILITY
	This section deals with the preparation of the site	
	and actions that need to be implemented before	
	construction commences	
PHASE	SITE ESTABLISHMENT	MC, ELO, ECO
ENVIRONMENTA	L MANAGEMENT PROGRAMME	
	for relevant construction activities. The ECO must	
	approve all of the method statements before they	
	become operational.	
	Site demarcation and compliance	
	9. Before construction begins, all areas to be	
	developed must be clearly demarcated with fencing	
	or orange construction barrier where applicable and	
	practical.	
	10. All tower positions must be pegged by a qualified	
	surveyor prior to the onset of construction.	
	11. All existing boreholes within the power line corridor	
	have to be identified and surveyed.	
	12. All Construction Camps are to be fenced off in such	
	a manner that unlawful entry is prevented and	
	access is controlled. Signage shall be erected at all	
	access points in compliance with all applicable	
	occupational health and safety requirements. All	
	access points to the Construction Camp should be	
	controlled by a guard or otherwise monitored, to	
	prevent unlawful access.	
	13. The contractor and ECO must ensure compliance with conditions described in the EA.	
	14. All no-go areas on the servitude must be properly	
	fenced off and signage placed prior to the onset of	
	construction. If this is not practical (such as where	
	the area is too large to fence off), the area should	
	be demarcated with barrier tape and signage	
	should be erected.	
	15. Records of compliance / non-compliance with the	
	conditions of the authorisation must be kept and be	
	available on request.	
	16. Records of all environmental incidents must be	
	maintained and a copy of these records be made	

IMPACT	SITE PREPARATION	RESPONSIBILITY
	This section deals with the preparation of the site	
	and actions that need to be implemented before	
	construction commences	
PHASE	SITE ESTABLISHMENT	MC, ELO, ECO
ENVIRONMENTA	L MANAGEMENT PROGRAMME	
	available to provincial department on request	
	throughout the project execution.	
	Labour	
	17. All unskilled labourers should be drawn from the	
	local market and where possible use should be	
	made of local semiskilled and skilled personnel.	
	Training of site staff	
	18. Environmental awareness training for all	
	construction staff must be undertaken by the ELO	
	prior to construction starting.	
	19. The ECO must undertake training of the contractor	
	and other main contractors (training of other staff is	
	the responsibility of the ELO).	
	20. All stakeholders and key personnel should undergo	
	an archaeological induction course, as part of their	
	overall training. The course should highlight the	
	appropriate communication channels to managers	
	and educate workers with regard to recognising	
	artefacts, features and significant sites.	
	21. Project manager shall ensure that the training and	
	capabilities of the Contractor's site staff are	
	adequate to carry out the designated tasks.	
	22. Staff operating equipment (such as excavators,	
	cranes, etc.) shall be adequately trained and	
	sensitised to any potential hazards associated with	
	their tasks. No operator shall be permitted to	
	operate critical items of mechanical equipment	
	without having been trained by the Contractor and	
	certified competent by the Project Manager.	
	been trained by the Contractor and certified	
	<ul> <li>22. Staff operating equipment (such as excavators, cranes, etc.) shall be adequately trained and sensitised to any potential hazards associated with their tasks. No operator shall be permitted to operate critical items of mechanical equipment without having been trained by the Contractor and certified competent by the Project Manager.</li> <li>23. No operator shall be permitted to operate critical items of mechanical equipment without having</li> </ul>	

IMPACT	SITE PREPARATION	RESPONSIBILITY
	This section deals with the preparation of the site	
	and actions that need to be implemented before	
	construction commences	
PHASE	SITE ESTABLISHMENT	MC, ELO, ECO
ENVIRONMENTA	L MANAGEMENT PROGRAMME	
	competent by the Project Manager.	
	24. Environmental awareness training for construction	
	staff, concerning the prevention of accidental	
	spillage of hazardous chemicals and oil; pollution of	
	water resources (both surface and groundwater),	
	air pollution and litter control and identification of	
	archaeological artefacts must be undertaken by the	
	ELO.	
	25. Staff should be educated as to the need to refrain	
	from indiscriminate waste disposal and/or pollution	
	of local soil and water resources and receive the	
	necessary safety training.	

#### 2.2.2 Consultation

Table 5: Consultation

IMPACT	CONSULTATION	RESPONSIBILITY
	This section deals with the public consultation of	
	the site and actions that need to be implemented	
	before construction commences	
PHASE	PRE-CONSTRUCTION	ELO
ENVIRONMENTA	L MANAGEMENT PROGRAMME	
MITIGATION /	Consultation	
METHOD	1. Engage in thorough, open, and constructive	
STATEMENT	consultation with any and all land owners.	
	2. The Landowners shall be informed of the starting	
	date of construction as well as the phases in which	
	the construction shall take place.	
	3. Provide a mechanism through which information	
	could be exchanged between the project proponent	
	and stakeholders.	

IMPACT	CONSULTATION  This section deals with the public consultation of the site and actions that need to be implemented before construction commences	RESPONSIBILITY
PHASE	PRE-CONSTRUCTION	ELO
ENVIRONMENTA	L MANAGEMENT PROGRAMME	
	<ul> <li>4. Surrounding communities must be kept informed, through the identified and agreed consultation channels, of the commencement of construction.</li> <li>5. Solicit views and concerns from the public and allow them to suggest mitigations and enhancement measures.</li> </ul>	

## 2.2.3 Site Clearing

Table 6: Site Clearing

IMPACT	SITE CLEARING	RESPONSIBILITY
	This section deals with site clearing and actions	
	that need to be implemented before construction	
	commences	
PHASE	PRE-CONSTRUCTION	MC
ENVIRONMEN	TAL MANAGEMENT PROGRAMME	
MITIGATION/	Site clearing	
METHOD	1. Site clearing must take place in a phased manner,	
STATEMENT	as and when required.	
	2. Areas which are not to be constructed on within two	
	months must not be cleared to reduce erosion risks.	
	3. The area to be cleared must be clearly demarcated	
	and this footprint strictly maintained.	
	4. Spoil that is removed from the site must be	
	removed to an approved spoil site or a licensed	
	landfill site.	
	5. The necessary silt fences and erosion control	
	measures must be implemented in areas where	
	these risks are more prevalent.	
	6. Conduct construction walk down prior to	
	construction to conduct a search and rescue	
	exercise.	

- 7. Demarcation of sensitive areas prior to construction activities starting.
- 8. In terms of surface water, potential negative impacts are related primarily to vegetation clearing activities in the riparian habitat, wetlands and drainage lines. Mitigation measures should be strictly implemented.

## 2.3 Construction Phase

## 2.3.1 Construction Camp

Table 7: Construction Camp

IMPACT	CONSTRUCTION CAMP	RESPONSIBILITY
	This section deals with construction camp and	
	actions that need to be implemented during	
	construction	
PHASE	CONSTRUCTION	MC / ELO / ECO
ENVIRONMEN <sup>-</sup>	TAL MANAGEMENT PROGRAMME	
MITIGATION /	Site of construction camp	
METHOD	1. Choice of site for the Contractor's camp requires	
STATEMENT	the Project Manager and ECO's permission and	
	must take into account location of local residents	
	and / or ecologically sensitive areas, including flood	
	zones. A site plan must be submitted to the	
	Project Manager for approval.	
	2. The size of the construction camp should be	
	minimized (especially where natural vegetation or	
	grassland has had to be cleared for its	
	construction).	
	3. Adequate parking must be provided for site staff	
	and visitors. The Contractor must attend to	
	drainage of the camp site to avoid standing water	
	and / or sheet erosion.	
	4. Suitable control measures over the Contractor's	
	yard, plant and material storage to mitigate any	
	visual impact of the construction activity must be	
	implemented.	
	Construction Camp	
	5. The ECO and Contractor must inspect the	
	Construction Camp site to confirm and note any	
	environmental sensitivity.	
	6. The construction camp layout plan must be	
	provided to the ECO for approval prior to the	
	construction of the camp.	
	7. The construction camp must be fenced off and on-

IMPACT	CONSTRUCTION CAMP	RESPONSIBILITY
	This section deals with construction camp and	
	actions that need to be implemented during	
	construction	
PHASE	CONSTRUCTION	MC / ELO / ECO
ENVIRONMENT	TAL MANAGEMENT PROGRAMME	
	site security should be put in place prior to	
	commencing with the construction activities.	
	8. The Contractor shall supply a wastewater	
	management system that will comply with legal	
	requirements and be acceptable to Eskom if this	
	does not already exist on the site.	
	9. Site establishment shall take place in an orderly	
	manner and all required amenities shall be	
	installed at camp sites before the main workforce	
	move onto site.	
	10. All construction equipment must be stored within	
	this construction camp or the farm under lease.	
	11. All associated oil changes etc (no servicing) must	
	take place within this camp on a sealed surface	
	such as a concrete slab or a similar appropriate	
	surface.	
	12. An area for the storage of hazardous materials	
	must be established that conforms to the relevant	
	safety requirements and that provides for spillage	
	prevention and containment	
	13. All Construction Camps shall be provided with	
	portable fire extinguishing equipment, in	
	accordance with all relevant legislation and must	
	be readily accessible.	
	14. The Contractor must provide sufficient ablution	
	facilities, in the form of portable / VIP toilets, at the	
	Construction Camps, and shall conform to all	
	relevant health and safety standards and codes.	
	No pit latrines, French drain systems or soak away	
	systems shall be allowed and toilets may not be	
	situated within 50 meters of any surface water	
	body or 1:100 year flood line. A sufficient number	
	of toilets shall be provided to accommodate the	
	number of personnel working in the area.	
	manner and all required amenities shall be installed at camp sites before the main workforce move onto site.  10. All construction equipment must be stored within this construction camp or the farm under lease.  11. All associated oil changes etc (no servicing) must take place within this camp on a sealed surface such as a concrete slab or a similar appropriate surface.  12. An area for the storage of hazardous materials must be established that conforms to the relevant safety requirements and that provides for spillage prevention and containment  13. All Construction Camps shall be provided with portable fire extinguishing equipment, in accordance with all relevant legislation and must be readily accessible.  14. The Contractor must provide sufficient ablution facilities, in the form of portable / VIP toilets, at the Construction Camps, and shall conform to all relevant health and safety standards and codes. No pit latrines, French drain systems or soak away systems shall be allowed and toilets may not be situated within 50 meters of any surface water body or 1:100 year flood line. A sufficient number of toilets shall be provided to accommodate the

	actions that need to be implemented during	
	construction	
PHASE	CONSTRUCTION	MC / ELO / ECO
ENVIRONMEN <sup>*</sup>	TAL MANAGEMENT PROGRAMME	
	area(s). These pollution prevention measures for	
	storage should include a bund wall high enough to	
	contain at least 110% of any stored volume, and	
	this should be sited away from drainage lines in a	
	site with the approval of the Project Manager. The	
	bund wall must be high enough to contain 110% of	
	the total volume of the stored hazardous material	
	with an additional allocation for potential	
	stormwater events.	
	22. All fuel storage areas must be roofed to avoid	
	creation of dirty stormwater	
	23. These storage facilities (including any tanks) must	
	be on an impermeable surface that is protected	
	from the ingress of storm water from surrounding	
	areas in order to ensure that accidental spillage	
	does not pollute local soil or water resources.	
	24. Material Safety Data Sheets (MSDSs) shall be	
	readily available on site for all chemicals and	
	hazardous substances to be used on site. Where	
	possible the available, MSDSs should additionally	
	include information on ecological impacts and	
	measures to minimise negative environmental	
	impacts during accidental releases or escapes.	
	25. Storage areas containing hazardous substances /	
	materials must be clearly signposted.	
	26. Staff dealing with these materials / substances	
	must be aware of their potential impacts and follow	
	the appropriate safety measures.	
	27. An approved waste disposal contractor must be	
	employed to remove and recycle waste oil, if	
	practical. The contractor must ensure that its staff	
	is made aware of the health risks associated with	
	any hazardous substances used and has been	
	provided with the appropriate protective	

IMPACT	CONSTRUCTION CAMP	RESPONSIBILITY

ENVIRONMEN	TAL MANAGEMENT PROGRAMME	
	clothing/equipment in case of spillages or	
	accidents and have received the necessary	
	training.	
	28. All excess cement and concrete mixes are to be	
	contained on the construction site prior to disposal off site.	
	29. All major spills as specified in the contractor	
	emergency response procedure of any materials,	
	chemicals, fuels or other potentially hazardous or	
	pollutant substances must be cleaned immediately	
	and the cause of the spill investigated.	
	Preventative measures must be identified and	
	submitted to the ECO for information. Emergency	
	response procedures to be followed and	
	implemented.	
	Desirence of construction come	
	Drainage of construction camp	
	30. Surface drainage measures must be established in the Construction Camps so as to prevent	
	<ul> <li>Ponding of water;</li> </ul>	
	<ul><li>Foliating of water,</li><li>Erosion as a result of accelerated runoff;</li></ul>	
	and,	
	<ul> <li>Uncontrolled discharge of polluted runoff</li> </ul>	

Table 8: Construction Traffic and Access

IMPACT	CONSTRUCTION TRAFFIC AND ACCESS	RESPONSIBILITY
	This section deals with construction traffic and	
	access and actions that need to be implemented	
	during construction	
PHASE	CONSTRUCTION	MC / ELO
ENVIRONMENT	AL MANAGEMENT PROGRAMME	
MITIGATION /	Construction traffic	
METHOD	1. All equipment moved onto site or off site during a	
STATEMENT	project is subject to the legal requirements as well	
	as Eskom specifications for the transport of such	
	equipment.	
	2. The Contractor shall meet these safety	
	requirements under all circumstances. All	
	equipment transported shall be clearly labelled as	
	to their potential hazards according to	
	specifications. All the required safety labelling on	
	the containers and trucks used shall be in place.	
	3. The Contractor shall ensure that all the necessary	
	precautions against damage to the environment	
	and injury to persons are taken in the event of an	
	accident.	
	4. Construction routes and required access roads	
	must be clearly defined	
	5. No new access roads to be created through	
	wetlands and drainage lines. Existing tracks must	
	be used.	
	6. Delivery of equipment must be undertaken with	
	the minimum amount of trips to reduce the carbon	
	footprint of these activities.	
	7. Access of all construction and material delivery	
	vehicles should be strictly controlled, especially	
	during wet weather to avoid compaction and	
	damage to the topsoil structure.	
	8. Damping down of the un-surfaced roads must be	
	implemented to reduce dust and nuisance.	
	9. Vehicles and equipment shall be serviced	
	regularly to avoid the contamination of soil from oil	
	and hydraulic fluid leaks etc.	

IMPACT	CONSTRUCTION TRAFFIC AND ACCESS	RESPONSIBILITY
	This section deals with construction traffic and	
	access and actions that need to be implemented	
	during construction	
PHASE	CONSTRUCTION	MC / ELO
ENVIRONMENT	AL MANAGEMENT PROGRAMME	
	10. Servicing must be done in dedicated service areas	
	on site or else off site if no such area exists.	
	11. Oil changes must take place on a concrete	
	platform and or over a drip tray to avoid pollution.	
	12. Soils compacted by construction shall be deep	
	ripped to loosen compacted layers and re-graded	
	to even running levels.	
	13. Any temporary access roads to be rehabilitated	
	prior to contractors leaving the site.	
	Access	
	14. The main routes on the site must be clearly	
	signposted and printed delivery maps must be	
	issued to all suppliers and Sub-Contractors.	
	15. Planning of access routes to the site for	
	construction purposes shall be done in	
	conjunction with the Contractor and the	
	Landowner. All agreements reached should be	
	documented and no verbal agreements should be	
	made. The Contractor shall clearly mark all	
	access roads. Roads not to be used shall be	
	marked with a "NO ENTRY for construction	
	vehicles" sign.	
	Road maintenance	
	16. The ECO must establish and agree maintenance	
	responsibilities with the landowner.	
	17. All existing private access roads used for	
	construction purposes, shall be maintained at all	
	times to ensure that the local people have free	
	access to and from their properties.  18. Where necessary suitable measures shall be	
	taken to rehabilitate damaged areas.	
	19. Contractors should ensure that access roads are	
	maintained in good condition by attending to	
	maintained in good condition by attending to

	This section deals with construction traffic and	
	access and actions that need to be implemented	
	during construction	
PHASE	CONSTRUCTION	MC / ELO
ENVIRONMENT	AL MANAGEMENT PROGRAMME	
	potholes, corrugations and storm water damages	
	as soon as these develop.	
	20. If necessary, staff must be employed to clean	
	surfaced roads adjacent to construction sites	
	where materials have spilt.	
	General	
	21. The contractor shall meet safety requirements	
	under all circumstances. All equipment	
	transported shall be clearly labelled as to their	
	potential hazards according to specifications. All	
	the required safety labelling on the containers and	
	trucks used shall be in place.	
	22. The Contractor shall ensure that all the necessary	
	precautions against damage to the environment	
	and injury to persons are taken.	
	23. Care for the safety and security of community members crossing access roads should receive	
	priority at all times.	
	24. It is not necessary to clear the 31m wide servitude	
	of all vegetation. Clearance should be kept to a	
	minimum. 'Only those woody vegetation directly	
	under the line are allowed to be removed and an	
	additional strip of 3 to 6 meters on both sides of	
	the line'.	

Table 9: Environmental Education and Training

		MIC, LLO
ENVIRONMENTA	L MANAGEMENT PROGRAMME	
MITIGATION /	Environmental training	
METHOD	The project manager must appoint an ECO prior	
STATEMENT	to construction	
	2. Ensure that all site personnel have a basic level	
	of environmental awareness training. The	
	Contractor must submit a proposal for this	
	training to the ECO for approval. Topics covered	
	should include:	
	<ul><li>What is meant by "Environment"</li></ul>	
	<ul> <li>Why the environment needs to be</li> </ul>	
	protected and conserved	
	<ul> <li>How construction activities can impact</li> </ul>	
	on the environment	
	What can be done to mitigate against	
	such impacts	
	<ul> <li>Awareness of emergency and spills</li> </ul>	
	response provisions	
	Social responsibility during construction	
	e.g. being considerate to local residents	
	<ul> <li>Specific mitigation measures stipulated</li> </ul>	
	in the EMPr and EA.  3. Environmental awareness training for all	
	Environmental awareness training for all construction staff must be undertaken by the	
	ELO prior to construction starting.	
	4. The ECO must undertake training of the	
	contractor and other main contractors (training of	
	other staff is the responsibility of the ELO).	
	5. Project manager shall ensure that the training	
	and capabilities of the Contractor's site staff are	
	adequate to carry out the designated tasks.	
	6. It is the Contractor's responsibility to provide the	

IMPACT	ENVIRONMENTAL EDUCATION AND TRAINING	RESPONSIBILITY
	This section deals with the environmental	
	training of construction employees.	
PHASE	CONSTRUCTION	MC, ELO
		WIG, ELO
ENVIRONMENTA	L MANAGEMENT PROGRAMME	
	site foreman with no less than 1 hour's environmental training and to ensure that the foreman has sufficient understanding to pass this information onto the construction staff.  7. Training should be provided to the staff members in the use of the appropriate fire-fighting equipment. Translators are to be used where necessary.  8. Use should be made of environmental awareness posters on site.  9. The need for a "clean site" policy also needs to be explained to the workers.  10. Staff operating equipment (such as cranes, etc.) shall be adequately trained and sensitized to any potential hazards associated with their tasks.  11. No operator shall be permitted to operate critical items of mechanical equipment without having	
	been trained by the Contractor and certified competent by the Project Manager.  12. Environmental awareness training for construction staff, concerning the prevention of accidental spillage of hazardous chemicals and oil; pollution of water resources (both surface and groundwater), air pollution and litter control and identification of archaeological artefacts must be undertaken by the ELO.  13. Staff must be educated as to the need to refrain from indiscriminate waste disposal and/or pollution of local soil and water resources and receive the necessary safety training.	
	The Contractor must monitor the performance of construction workers to ensure that the points relayed during their introduction have been	

IMPACT	ENVIRONMENTAL EDUCATION AND TRAINING This section deals with the environmental training of construction employees.	RESPONSIBILITY
PHASE	CONSTRUCTION	MC, ELO
ENVIRONMENTA	L MANAGEMENT PROGRAMME	
	properly understood and are being followed. If	
	necessary, the ECO and / or a translator should	
	be called to the site to further explain aspects of	
	environmental or social behaviour that are	
	unclear. Toolbox talks are recommended.	

## 2.3.4 Soils and Geology

General guidelines for management of soils are provided in Annexure B

Table 10: Soils and Geology

IMPACT	SOILS AND GEOLOGY	RESPONSIBILITY
	This section deals with soils and geology and	
	actions that need to be implemented during	
	construction	
PHASE	CONSTRUCTION	MC/ ELO
ENVIRONMENTA	L MANAGEMENT PROGRAMME	
MITIGATION /	General	
METHOD	1. Minimise disturbance of natural vegetation on	
STATEMENT	the sites.	
	2. Access routes must ideally be planned on areas	
	less susceptible to erosion/ destabilization/	
	compaction or appropriate action must be taken	
	to minimise impact, e.g. planning of new access	
	routes along contour lines and minimizing of	
	cutting and filling operations.	
	3. Rehabilitate soil and vegetation.	
	4. Implement effective erosion control measures.	
	5. The ECO shall ensure that all agreements	
	reached with the Landowner are fulfilled, and	
	that such areas be rehabilitated once	
	construction is completed. Should any claim be	
	instituted against Eskom, due to the actions of	

ESKOM HOLDINGS SOC LIMITED

	actions that need to be implemented during	
	construction	
PHASE	CONSTRUCTION	MC/ ELO
ENVIRONMENTA	L MANAGEMENT PROGRAMME	
	the Contractor at a batching plant site, Eskom	
	shall hold the Contractor fully responsible for the	
	claim until such time that the Contractor can	
	prove otherwise with the necessary	
	documentation.	
	Tanacil	
	Topsoil 6. The contractor should, prior to the	
	6. The contractor should, prior to the commencement of earthworks determine the	
	average depth of topsoil, and agree on this with	
	the ECO. Due to the length of the line, this will	
	have to be undertaken in a number of locations	
	due to the likely variability of soils along the	
	route.	
	7. The full depth of topsoil should be stripped from	
	areas affected by construction (substation site	
	and tower positions) and related activities prior	
	to the commencement of major earthworks. This	
	should include the building footprints, working	
	areas and storage areas.	
	8. At any tower sites where conventional	
	foundations are installed, the Contractor shall	
	remove the topsoil separately and store it for	
	later use during rehabilitation of such tower	
	sites. During backfilling operations, the	
	Contractor shall take care not to dump the	
	topsoil in the bottom of the foundation and then	
	put spoil on top of that.	
	Soil Stripping	
	No soil stripping must take place on areas within	
	the site that the contractor does not require for	
	construction works or areas of retained	
	vegetation.	
	10. Subsoil and overburden in all construction and	

IMPACT	SOILS AND GEOLOGY	RESPONSIBILITY
	This section deals with soils and geology and	
	actions that need to be implemented during	
	construction	
PHASE	CONSTRUCTION	MC/ ELO
ENVIRONMENTA	L MANAGEMENT PROGRAMME	
	lay down areas should be stockpiled separately	
	to be returned for backfilling in the correct soil	
	horizon order.	
	11. Construction vehicles must only be allowed to	
	utilize existing tracks or pre-planned access	
	routes.	
	Soil Stockpiles	
	12. Stockpiles should not be situated such that they	
	obstruct natural water pathways.	
	13. Stockpiles should not exceed 2m in height	
	unless otherwise permitted by the Engineer.	
	14. If stockpiles are exposed to windy conditions or	
	heavy rain, they should be covered either by	
	vegetation or geofabric, depending on the	
	duration of the project. Stockpiles may further be	
	protected by the construction of berms or low	
	brick walls around their bases.	
	15. Stockpiles should be kept clear of weeds and	
	alien vegetation growth by regular weeding.	
	16. Where contamination of soil is expected,	
	analysis must be done prior to disposal of soil to	
	determine the appropriate disposal route. Proof	
	from an approved waste disposal site where	
	contaminated soils are dumped if and when a	
	spillage / leakage occur should be attained and given to the project manager.	
	given to the project manager.	
	Fuel storage	
	17. Topsoil and subsoil to be protected from	
	contamination. This should be monitored on a	
	monthly basis by a visual inspection of diesel/oil	
	spillage and pollution prevention facilities.	
	18. Fuel and material storage must be away from	
	stockpiles.	

IMPACT	SOILS AND GEOLOGY	RESPONSIBILITY
	This section deals with soils and geology and	
	actions that need to be implemented during	
	construction	
PHASE	CONSTRUCTION	MC/ ELO
ENVIRONMENTA	L MANAGEMENT PROGRAMME	
	24. The concrete batching plant must be contained	
	within a bunded area.	
	25. Concrete mixing must only take place within	
	designated areas.	
	26. Ready mixed concrete must be utilised where possible.	
	27. If a batching plant is necessary, run-off should	
	be managed effectively to avoid contamination	
	of other areas of the site. Run-off from the batch	

IMPACT	SOILS AND GEOLOGY This section deals with soils and geology and actions that need to be implemented during construction	RESPONSIBILITY
PHASE	CONSTRUCTION	MC/ ELO
ENVIRONMENTA	L MANAGEMENT PROGRAMME	
	plant must not be allowed to enter the storm water system.  Washing  28. No vehicles transporting concrete to the site may be washed on site.	
	Earthworks  29. Soils compacted during construction should be deeply ripped to loosen compacted layers and re-graded to even running levels. Topsoil should be re-spread over landscaped areas.	

### 2.3.5 Erosion Control

Table 11: Erosion Control

IMPACT	EROSION CONTROL	RESPONSIBILITY
	This section deals with erosion and actions that	
	need to be implemented during construction	
PHASE	CONSTRUCTION	ECO
ENVIRONMENTA	L MANAGEMENT PROGRAMME	
MITIGATION /	1. The use of silt fences and sand bags must be	
METHOD	implemented in areas that are susceptible to	
STATEMENT	erosion, if any.	
	2. Other erosion control measures that can be	
	implemented are as follows:	
	<ul> <li>Brush packing with cleared vegetation</li> </ul>	
	<ul><li>Mulch or chip packing</li></ul>	
	<ul><li>Planting of vegetation</li></ul>	
	<ul> <li>Hydroseeding / hand sowing</li> </ul>	
	3. Sensitive areas need to be identified prior to	
	construction so that the necessary precautions	

**ESKOM HOLDINGS SOC LIMITED** 

IMPACT	EROSION CONTROL	RESPONSIBILITY
	This section deals with erosion and actions that	
	need to be implemented during construction	
PHASE	CONSTRUCTION	ECO
ENVIRONMENTAL	L MANAGEMENT PROGRAMME	
	can be implemented.  4. All erosion control mechanisms need to be	
	regularly maintained.	
	5. Seeding of topsoil and subsoil stockpiles to	
	prevent wind and water erosion of soil surfaces.	
	<ol><li>Retention of vegetation where possible to avoid soil erosion</li></ol>	
	7. Vegetation clearance should be phased to ensure that the minimum area of soil is exposed to potential erosion at any one time.	
	8. Re-vegetation of disturbed surfaces should occur immediately after construction activities are	
	completed. This should be done through seeding with indigenous grasses.	
	<ol><li>No impediment to the natural water flow other than approved erosion control works is permitted.</li></ol>	
	10. To prevent stormwater damage, the increase in stormwater run-off resulting from construction activities must be estimated and the drainage system assessed accordingly. A drainage plan must be submitted to the Engineer for approval and must include the location and design criteria of any temporary stream crossings.	
	11. Implement site drainage and landscaping, to prevent surface ponding, where subsequent ingress into foundations has the potential to cause destabilisation over time.	
	12. Convey all runoff away from the substation and off the site.	
	13. Stockpiles not used in three (3) months after stripping must be seeded to prevent dust and erosion.	
	14. No new access roads to be construction through drainage lines and wetlands. Only existing roads	

IMPACT	EROSION CONTROL	RESPONSIBILITY
	This section deals with erosion and actions that	
	need to be implemented during construction	
PHASE	CONSTRUCTION	ECO
ENVIRONMENTA	AL MANAGEMENT PROGRAMME	
	must be used.	
	Run-off	
	15. Culverts should be constructed under roadways	
	that cross the natural flow of water in order to prevent damming.	
	16. Oil traps should be installed to remove the bulk	
	of the oil from the water, which water can then	
	be used on haul roads for dust suppression or as	
	wash down water in the wash bays.	
SITE SPECIFIC N	IITIGATION MEASURES	
MITIGATION /	17. If earthworks are required, wind screening and	
METHOD	stormwater control should be undertaken to	
STATEMENT	prevent soil loss from the site.	
	18. In the unlikely event that heavy rains are	
	expected activities should be put on hold to	
	reduce the risk of erosion.	
	19. If earthworks are required, any steep or large	
	embankments that are expected to be exposed	
	during the 'rainy' months should be armoured	
	with fascine like structures.	
	20. Use of berms and drainage channels to direct	
	water away from the construction areas where	
	necessary.	

Table 12: Water Use and Quality

IMPACT	Use and Quality WATER USE AND QUALITY	RESPONSIBILITY
	This section deals with water use and quality and	
	actions that need to be implemented during	
	construction	
PHASE	CONSTRUCTION	ECO
MITIGATION /	Water Use	
METHOD	1. Develop a sustainable water supply management	
STATEMENT	plan to minimize the impact to natural systems by managing water use, avoiding depletion of aquifers and minimizing impacts to water users.  2. No water must be abstracted from a natural water body unless authorised under a General Authorisation under the National Water Act, or unless authorised by the Department of Water Affairs through a water use licence if such a licence is required.  3. Water must be reused, recycled or treated where possible.  4. Water saving measures must be implemented.	Engineer
	<ul> <li>5. Consultation with key stakeholders to understand any conflicting water use demands and the communities' dependency on water resources and conservation requirements within the area.</li> <li>6. A water use licence is likely to be required with regards to water uses (c) and (i) of the NWA. (Recommended from the specialists report)</li> </ul>	
	<ul> <li>Water Quality.</li> <li>7. Discharge to surface water should not result in contaminant concentrations in excess of DWA standards.</li> <li>8. Efficient oil and grease traps or sumps should be installed and maintained at refuelling facilities, workshops, fuel storage depots, and containment areas and spill kits should be available with emergency response plans.</li> </ul>	

IMPACT	WATER USE AND QUALITY	RESPONSIBILITY
	This section deals with water use and quality and	
	actions that need to be implemented during	
	construction	
PHASE	CONSTRUCTION	ECO
	Stormwater	
	9. The site must be managed in order to prevent	
	pollution of drains, downstream watercourses or	
	groundwater, due to suspended solids and silt or	
	chemical pollutants.	
	10. Silt fences should be used to prevent any soil entering the stormwater drains.	
	11. Temporary cut off drains and berms may be	
	required to capture stormwater and promote infiltration.	
	12. Promote a water saving mind set with construction	
	workers in order to ensure less water wastage.	
	13. New stormwater construction must be developed	
	strictly according to specifications from engineers	
	in order to ensure efficiency.	
	14. Hazardous substances must be stored at least	
	20m from any water bodies on site to avoid pollution.	
	15. The installation of the stormwater system must	
	take place as soon as possible to attenuate	
	stormwater from the construction phase as well as	
	the operation phase.	
	16. Earth, stone and rubble is to be properly disposed	
	of, or utilized on site so as not to obstruct natural	
	water path ways over the site. i.e. these materials	
	must not be placed in stormwater channels,	
	drainage lines or rivers.	
	17. There should be a periodic checking of the site's	
	drainage system to ensure that the water flow is unobstructed.	
	18. If a batching plant is necessary, run-off should be	
	managed effectively to avoid contamination of	
	other areas of the site. Untreated runoff from the	
	batch plant must not be allowed to get into the	
	storm water system or nearby streams, rivers or	
	erosion channels or dongas.	

Table 13: Surface and Groundwater

IMPACT	SURFACE WATER AND GROUNDWATER	RESPONSIBILITY
	This section deals with surface and	
	groundwater and actions that need to be	
	implemented during construction	
PHASE	CONSTRUCTION	ECO / Main
		Contractor
ENVIRONMENTAL	MANAGEMENT PROGRAMME	
MITIGATION /	1. Site staff shall not be permitted to use any	
METHOD	other open water body or natural water source	
STATEMENT	adjacent to or within the designated site for	
	the purposes of bathing, washing of clothing	
	or for any construction or related activities.	
	2. Municipal water (or another source approved	
	by the ECO) should instead be used for all	
	activities such as washing of equipment or	
	disposal of any type of waste, dust	
	suppression, concrete mixing, compacting,	
	etc.	
	3. Relevant departments and other emergency	
	services should be contacted in order to deal	
	with spillages and contamination of aquatic	
	environments.	
	4. Ensure that stream flow can bypass	
	construction site.	
	5. Ensure that contaminants are safely stored	
	and away from construction site.	
	6. Disturbed surfaces must be kept to a	
	minimum. All surfaces must be rehabilitated	
	with indigenous vegetation, especially grass	
	species, as soon as construction activities are	
	complete.	
	7. Storm water management must be enforced	
	by monitoring runoff levels. At the start of	
	erosion, accelerated run-off must be diverted	
	away from bare soil.	
SITE SPECIFIC MIT	IGATION MEASURES	

**ESKOM HOLDINGS SOC LIMITED**

groundwater and actions that need to	be
implemented during construction	
PHASE CONSTRUCTION	ECO / Main
	Contractor
NVIRONMENTAL MANAGEMENT PROGRAMME	
MITIGATION / Recommendations should infrastructure	be
METHOD placed within the watercourse and association	ted
STATEMENT buffer zone areas:	
8. A construction method statement must	be
supplied to a suitably qualified wetland	or
aquatic specialist in order for suitable	site
specific mitigation measures to be devised	for
the construction phase, in addition to	the
measures specified here.	
9. Vehicle access into or through watercours	ses
may only be allowed where absolute	tely
necessary and after the requi	site
environmental authorisation and water u	use
license has been obtained.	
10. Vehicles must be restricted to smaller vehic	cles
where possible and not heavy vehicles to li	imit
compaction impacts. The number of trips i	nto
or through the watercourses must be limited	d to
the absolute minimum.	
11. In order to limit the amount of damage caus	sed
by vehicles, activity must be limited to	оа
narrow track or "Right of Way" (ROW) or	nly.
This track should not be more than 5m wide	<b>).</b>
12. Heavy machinery and vehicles must	be
checked for oil leaks before operating in	the
watercourse or the associated buffer zon	es.
Additionally, no fuelling or re-fuelling	is
allowed to take place in the watercourses a	and
the associated buffer zone areas.	
13. The removal of excavated sub-soils	or
substrate of the watercourses for	the
foundations of the towers must take place of	only
if completely necessary (i.e. if the excava	ted

IMPACT	SURFACE WATER AND GROUNDWATER	RESPO	NSIB	ILITY
	This section deals with surface and	1		
	groundwater and actions that need to be			
	implemented during construction			
PHASE	CONSTRUCTION	ECO	1	Main
		Contrac	ctor	
ENVIRONMENTAL	MANAGEMENT PROGRAMME			
	soil cannot be re-instated due to it being an			
	unsuitable grade of backfill for the foundation			
	of the structure etc.). Removed excavated			
	soils will need to be dumped at a registered			
	landfill that has sufficient capacity.			
	14. Soil stockpiles should separate topsoil's from			
	sub-surface soils. Where excavated soils can			
	be re-instated, the order of soils horizons			
	should be backfilled correctly (i.e. sub-surface			
	soils first, topsoil last).			
	15. All stockpiled soils should preferably be			
	placed outside the identified watercourses.			
	However, where this is not practical, the			
	stockpiled soils should be placed next to the			
	excavation pits. The stockpiles must be			
	bunded by suitable material that can resist			
	heavy rains and prevent increased run-off (for			
	example fixed wooden planks or bricks).			
	16. Any mixing of cement must either only take			
	place over a covered surface nearby or beside			
	the excavation pit. Cement mixing can take			
	place in the load bin of a vehicle. It is			
	important that no cement spills unnecessarily			
	in the area around the tower construction area			
	for risk of entering the watercourses.			
	17. Importantly portable sanitary facilities are to			
	be used and must be placed outside of the			
	watercourse and associated buffer zone			
	areas.			
	18. Watercourses must be cordoned off around			
	the construction areas and the RoW to			
	prevent any unnecessary access by			
	unauthorised personnel or vehicles. These			

IMPACT	SURFACE WATER AND GROUNDWATER This section deals with surface and groundwater and actions that need to be implemented during construction  CONSTRUCTION	RESPONSIBILITY		
PHASE	CONSTRUCTION	ECO Contrac	/ ctor	Main
ENVIRONMENTAL	MANAGEMENT PROGRAMME			
	areas must be identified as "no-go" zones.  19. Vegetation must not to be damaged or removed unless they are located within the construction footprint of the towers or RoW tracks. Where sensitive vegetation is identified in the foot print of a tower, the relevant authority must be contacted and must advise on the most appropriate plan of action (i.e. removal and/or translocation).  20. Stringing operations must be undertaken by hand where possible and not vehicles to limit ingress and associated damage through and across wetlands.  21. The fitment of bird anti-collision devices over the watercourse sections of the power lines must take place on the ground prior to stringing to prevent the need for vehicles to undergo operations in problematic areas (i.e. through watercourses).  22. A site-specific post-construction wetland rehabilitation plan must be compiled by a suitably qualified wetland or aquatic specialist to rehabilitate and monitor the affected watercourses and associated buffer zones where construction impacts have been caused.			

Table 14: Waste Management

Table 14: Waste Ma	WASTE MANAGEMENT	RESPONSIBILITY
	This section deals with waste management and	
	actions that need to be implemented during	
	construction	
PHASE	CONSTRUCTION	ELO
ENVIRONMENTAL	MANAGEMENT PROGRAMME	
MITIGATION /	Litter management	
METHOD	1. The contractor should take steps to ensure that	
STATEMENT	littering by construction workers does not occur.	
	2. Refuse bins must be placed at strategic	
	positions to ensure that litter does not	
	accumulate within the construction site.	
	3. The Contractor shall supply waste collection	
	bins where such is not available and all solid	
	waste collected shall be disposed of at	
	registered/licensed landfill.	
	4. A housekeeping team should be appointed to	
	regularly maintain the litter and rubble situation	
	on the construction site.	
	5. If possible and feasible, all waste generated on	
	site must be separated into glass, plastic,	
	paper, metal and wood and recycled. An	
	independent contractor can be appointed to	
	conduct this recycling.	
	6. In general, any litter must be cleared	
	immediately.	
	7. Littering by the employees of the Contractor	
	shall not be allowed under any circumstances.	
	The ECO shall monitor the neatness of the	
	work sites as well as the Contractor campsite.	
	8. Skip waste containers should be maintained on	
	site. These should be kept covered and	
	arrangements made for them to be collected	
	regularly.	
	9. All waste must be removed from the site and	
	transported to a landfill site promptly to ensure

	construction	
PHASE	CONSTRUCTION	ELO
ENVIRONMENTAL	MANAGEMENT PROGRAMME	
	<ul> <li>that it does not attract vermin or produce odours.</li> <li>10. Where a registered waste site is not available close to the construction site, the Contractor shall provide a method statement with regard to waste management.</li> <li>11. A certificate of disposal shall be obtained by the Contractor and kept on file, if relevant.</li> <li>12. Under no circumstances may solid waste be burnt on site.</li> <li>13. All waste must be removed promptly to ensure that it does not attract vermin or produce odours.</li> <li>14. It is important that the contractors (and sub-</li> </ul>	
	contractors by implication) and workers must be informed of the facilities and procedures available for the disposal of waste.  Hazardous waste  15. Any hazardous substances must be stored at least 20m from any of the water bodies on site.  16. All waste hazardous materials must be carefully stored as advised by the ECO, and	
	then disposed of off site at a licensed landfill site, where practical. Incineration may be used where relevant.  17. Contaminants must be stored safely to avoid spillage.  18. Machinery must be properly maintained to keep oil leaks in check.  19. All necessary precaution measures shall be taken to prevent soil or surface water pollution from hazardous materials used during construction and any spills shall immediately	

IMPACT	WASTE MANAGEMENT	RESPONSIBILITY
	This section deals with waste management and	
	actions that need to be implemented during	
	construction	
PHASE	CONSTRUCTION	ELO
ENVIRONMENTAL	MANAGEMENT PROGRAMME	
	be cleaned up and all affected areas	
	rehabilitated.	
	Sanitation	
	20. Adequate sanitary facilities and ablutions must	
	be provided for construction workers (1 toilet	
	per every 15 workers).	
	21. It is preferable to install flush toilets at the	
	construction camp which feeds into the	
	municipal sewage system.	
	22. Staff shall be sensitised to the fact that they	
	should use these facilities at all times. No	
	indiscriminate sanitary activities on site shall be	
	allowed.	
	23. Ablution facilities shall be within 50m from	
	workplaces and not closer than 50m from any	
	natural water bodies or boreholes. There	
	should be enough toilets available to	
	accommodate the workforce (minimum	
	requirement 1: 15 workers). Male and females	
	must be accommodated separately where	
	possible.	
	24. Toilets must be serviced regularly and the ECO	
	must inspect toilets regularly.	
	25. Toilets should be no closer than 50m or above	
	the 1:100 year flood line from any natural or	
	manmade water bodies or drainage lines or	
	alternatively located in a place approved of by	
	the Engineer.	
	26. Under no circumstances may open areas,	
	neighbours fences or the surrounding bush be	
	used as a toilet facility.	
	27. The construction of "Long Drop" toilets is	
	forbidden. Toilets connected to the sewage	

IMPACT	WASTE MANAGEMENT	RESPONSIBILITY
	This section deals with waste management and	
	actions that need to be implemented during	
	construction	
PHASE	CONSTRUCTION	ELO
ENVIRONMENTAL	MANAGEMENT PROGRAMME	
	treatment plant or chemical toilets are preferable.  28. Potable water must be provided for all construction staff.	
	Remedial actions  29. Depending on the nature and extent of the spill, contaminated soil must be either excavated or treated on-site.  30. Excavation of contaminated soil must involve careful removal of soil using appropriate tools/machinery to storage containers until treated or disposed of at a licensed hazardous landfill site.  31. The ECO must determine the precise method of treatment for polluted soil. This could involve the application of soil absorbent materials as well as oil-digestive powders to the contaminated soil.	
	<ul> <li>32. If a spill occurs on an impermeable surface such as cement or concrete, the surface spill must be contained using oil absorbent material.</li> <li>33. If necessary, oil absorbent sheets or pads must be attached to leaky machinery or infrastructure.</li> <li>34. Materials used for the remediation of petrochemical spills must be used according to product specifications and guidance for use.</li> <li>35. Contaminated remediation materials must be carefully removed from the area of the spill so as to prevent further release of petrochemicals to the environment, and stored in adequate containers until appropriate disposal.</li> </ul>

MITIGATION /	Existing vegetation	
METHOD	1. Vegetation removal must be limited to the	
STATEMENT	construction corridor.	
	2. Vegetation clearing on tower sites must be	
	kept to a minimum. Big trees with large root	
	systems shall be cut manually and removed,	
	as the use of a bulldozer will cause major	
	damage to the soil when the root systems are	
	removed. Stumps shall be treated with	
	herbicide.	
	3. Smaller vegetation can be flattened with a	
	machine, but the blade should be kept above	
	ground level to prevent scalping. Any	
	vegetation cleared on a tower site shall be	
	removed or flattened and not be pushed to	
	form an embankment around the tower.	
	4. Trees and vegetation not interfering with the	
	statutory clearance to the conductors can be	
	left under the line. Dense vegetation under the	
	line which could cause a fire hazard,	
	particularly in the middle third of the span in	
	the vicinity of the lowest point of the	
	conductors, will be considered as a separate	
	case.	
	5. Upon completion of the stringing operations	
	and before handover, the servitude must be	
	inspected and all vegetation interfering with	
	the safe operation of the line shall be removed	
	/ cut down.	
	6. Vegetation to be removed as it becomes	
	necessary rather than removal of all

avoided.			

IMPACT	BIODIVERSITY (incl Avifauna)	RESPONSIBILITY
	This section deals with flora and fauna actions	
	that need to be implemented during	
	construction	
PHASE	CONSTRUCTION	ELO
ENVIRONMENTAL	MANAGEMENT PROGRAMME	
	Herbicides	
	25. Herbicide use shall only be allowed according	
	to contract specifications. The application shall	
	be according to set specifications and under	
	supervision of a qualified technician. The	
	possibility of leaching into the surrounding	
	environment shall be properly investigated and	
	only environmentally friendly herbicides shall	
	be used.	
	26. The use of pesticides and herbicides on the	
	site must be discouraged as these impact on	
	important pollinator species of indigenous vegetation.	
SITE SPECIFIC MIT		
MITIGATION /	Loss of habitat for red data / general species	
METHOD	27. Existing servitudes and roadways should be	
STATEMENT	utilised as far as possible, thereby limiting the	
	impact of establishing new service roads.  28. It is recommended that a conservation buffer	
	zone be applied to all the surrounding suitable	
	wetland habitat units.	
	29. Existing indigenous vegetation within the	
	servitude of the power line must be retained	
	where possible.	
	30. Remove and relocate any plants of botanical	
	or ecological significance (these must be	
	indicated by the ECO). Individuals can be	
	translocated to outside of the footprint area or	
	removed to a suitable botanical garden for	
	cultivation and protection. This should only be	
	done after consultation with the provincial	
	conservation authorities.	
	31. No vegetation to be used for firewood.	
	32. Ensure that the impact on protected trees and

	that need to be implemented during	
	construction	
PHASE	CONSTRUCTION	ELO
ENVIRONMENTAL	MANAGEMENT PROGRAMME	
	plants are minimized by careful placement of	
	power line, the access road and the substation	
	in order to avoid plant species of special	
	concern.	
	33. Special measures should be provided for the	
	protection of certain forests, woodlands and	
	trees.	
	34. No indigenous, Red Data and protected	
	species may be distributed or removed without	
	the necessary permits or licenses.	
	35. Only the taller floral species and those	
	individuals that pose a significant fire risk to	
	the overhead power line should be removed	
	within the servitude areas. Forested gullies,	
	valleys and riparian vegetation should be	
	spanned as far as possible from higher ground	
	so that the removal of vegetation can be	
	minimised	
	36. Dumping or storage of topsoil must not be	
	done on established vegetation, but should	
	remain within designated areas	
	37. All labourers to be informed of disciplinary	
	actions for the willful damage to plants.	
	38. Movement of personnel and machinery to be	
	limited to the areas designated for the	
	established servitude.	
	39. Important habitat to avifaunal conservation	
	within the area (i.e. wetland habitat) should be	
	avoided.	
	avolucu.	

Table 16: Air Quality

IMPACT	AIR QUALITY	RESPONSIBILITY
	This table deals with mitigation measures to	
	prevent air pollution	
PHASE	CONSTRUCTION	ELO
ENVIRONMENTAL	MANAGEMENT PROGRAMME	
MITIGATION /	Dust control	
METHOD	1. Wheel washing and damping down of un-	
STATEMENT	surfaced and un-vegetated areas must occur in areas close to potential receptors of dust pollution. The ECO and ELO must identify these areas prior to construction starting in that particular area or prior to construction traffic needing to move along un-surfaced roads in certain areas.  2. Vegetation must be retained where possible in order to reduce dust travel.  3. Excavations and other clearing activities must only be done during agreed working times and permitting weather conditions to avoid drifting	
	<ul> <li>of sand and dust into neighbouring areas.</li> <li>4. The Contractor shall be responsible for dust control on site to ensure no nuisance is caused to sensitive receptors such as landowners and neighbouring communities.</li> <li>5. Dust generation must be kept to a minimum and suppressed on access roads and construction areas during dry periods. This can be accomplished by the regular application of water or a biodegradable soil stabilisation agent.</li> <li>6. Speed limits on un-surfaced roads must not be exceeded.</li> <li>7. Speed limits for construction vehicles must be clearly signposted and must be monitored by the ELO and ECO.</li> <li>8. Any complaints or claims emanating from the</li> </ul>	

IMPACT	AIR QUALITY	RESPONSIBILITY
	This table deals with mitigation measures to prevent air pollution	
	lack of dust control shall be attended to immediately by the ELO under the supervision of the ECO.	

## 2.3.11 Noise and Vibrations

Table 17: Noise and Vibrations

IMPACT	NOISE	RESPONSIBILITY
	This section deals with noise and actions that	
	need to be implemented during construction	
PHASE	CONSTRUCTION	ELO
ENVIRONMENTAL	MANAGEMENT PROGRAMME	
MITIGATION /	1. The construction phase must aim to adhere to	
METHOD	the relevant noise regulations and limit noise to	
STATEMENT	within standard working hours in order to	
	reduce disturbance of dwellings in close	
	proximity to the development.	
	2. Truck traffic should be routed away from noise	
	sensitive areas, where possible.	
	3. Noise levels must be kept within acceptable	
	limits.	
	4. Noisy operations should be combined so that	
	they occur where possible at the same time.	
	5. Construction activities are to be contained to	
	reasonable hours during the day and early	
	evening. Night-time activities near noise	
	sensitive areas must not be allowed.	
	6. Construction workers to wear necessary ear	
	protection gear.	
	7. Noisy activities to take place during allocated	
	construction hours.	
	8. Noise from labourers must be controlled.	
	9. Noise suppression measures must be applied	
	to all construction equipment. Construction	
	equipment must be kept in good working order	

IMPACT	NOISE	RESPONSIBILITY
	This section deals with noise and actions that	
	need to be implemented during construction	
PHASE	CONSTRUCTION	ELO
ENVIRONMENTAL	MANAGEMENT PROGRAMME	
	and where appropriate fitted with silencers which are kept in good working order. Should the vehicles or equipment not be in good working order, the contractor may be instructed to remove the offending vehicle or machinery from site.  10. The contractor must take measures to discourage labourers from loitering in the area and causing noise disturbance. Where possible labour shall be transported to and from the site by the contractor or his Sub-Contractors by the contractors own transport.  11. Apply regular and thorough maintenance schedules to equipment and processes. An increase in noise emission levels very often is a sign of the imminent mechanical failure of a machine.  12. Should blasting be required, the contractor will need to obtain a blasting permit. Moreover, the contractor must make the public aware of when blasting is to take place as well as the specific times of blasting. Blasting activities must take place at reasonable times and during daily working hours.	

## 2.3.12 Energy use

ENVIRONMENTAL M	ENVIRONMENTAL MANAGEMENT PROGRAMME				
	skilled personnel.				
	4. Local suppliers to be used where possible.				
	5. Ensure adequate advertising in the project				
	community areas, local papers for skilled				
	labour. Adverts will be placed in each area				
	where the public meetings were conducted.				
	6. Local community leaders as well as the				
	Local Municipalities must be utilised to				
	source labour.				
	7. The recruitment process must be equitable				
	and transparent. A concerted effort will be				
	made to guard against nepotism and/or any				
	form of favouritism during the process.				
	8. The informal daily recruitment of workers at				
	the construction camp must be avoided in				
	order to prevent the congregation and				
	loitering of job seekers at the construction				
	camp.				
	9. The recruitment of skilled labour will follow				
	standard advertising process in national				
	newspapers and interview based selection.				
	10. Record of official complaints by employees				
	to authorities must be kept i.e. Labour and				
	Social Security (Annexure A for complaints				
	record sheet).				
SITE SPECIFIC MITIGATION					
	11. Ensure that local employment is used as far				
	as possible.				
	12. Ensure that Eskom adhere to local				
	employment intentions.				
	13. Effectively communicate the number and				
	types of jobs available to surrounding				
	communities.

	to construction staff or precautions taken		
	and the time and dates when this was done.		
	This can then be used as evidence in court		
	should any claims be instituted against		
	Eskom or the Contractor.		
	13. The contractor must ensure that all		
	construction workers are well educated		
	about HIV/ AIDS and the risks surrounding		
	this disease. The location of the local clinic		
	where more information and counselling is		
	offered must be indicated to workers.		
	14. Material stockpiles or stacks must be stable		
	and well secured to avoid collapse and		
	possible injury to site workers / local		
	residents.		
	Worker facilities		
	15. Eating areas should be regularly serviced		
	and cleaned to ensure the highest possible		
	standards of hygiene and cleanliness.		
	16. Fires are not to be allowed outside		
	controlled areas.		
	17. Ablution facilities must be well maintained.		
	Hazardous substances		
	18. Working areas should be provided with		
	adequate ventilation and dust/fume		
	extraction systems to ensure that inhalation		
	exposure levels for potentially corrosive,		
	oxidizing, reactive or siliceous substances		
	are maintained and managed at safe levels.		
	19. Eye wash and emergency shower systems		
	should be provided in areas where there

	locations.	
	Fitness for work	
	28. Shift management systems must minimize	
	risk of fatigue. Establish alcohol and other	
	drug policy for the operation.	
	Travel and remote site health	
	29. Develop programs to prevent both chronic	
	and acute illnesses through appropriate	
	sanitation and vector control systems.	
	30. Food preparation areas should be provided	
	with adequate washing facilities.	
	31. Where food is prepared, food preparation	
	storage and disposal should be reviewed	
	regularly and monitored to minimise risk of	
	illness.	
	Protective gear	
	32. Personal Protective Equipment (PPE) must	
	be made available to all construction staff	
	and must be compulsory. Hard hats and	
	safety shoes must be worn at all times and	
	other PPE worn were necessary i.e. dust	
	masks, ear plugs etc.	
	33. No person is to enter the site without the	
	necessary PPE.	
	Site safety	
	34. The construction camp must remain fenced	
	for the entire construction period.	
	35. Potentially hazardous areas are to be	

demarcated and clearly marked.

	36. Adequate warning signs of hazardous	
	working areas must be in place.	
	37. Emergency numbers for local police and fire	
	department etc must be placed in a	
	prominent area.	
	38. Fire fighting equipment must be placed in	
	prominent positions across the site where it	
	is easily accessible. This includes fire	
	extinguishers, a fire blanket as well as a water tank.	
	39. Suitable conspicuous warning signs in	
	English and all other applicable languages	
	must be placed at all entrances to the site.	
	40. All speed limits must be adhered to.	
	Construction equipment safety	
	41. All equipment used for construction must be	
	in good working order with up to date	
	maintenance records.	
	Hazardous Material Storage	
	42. Staff that will be handling hazardous	
	materials must be trained to do so.	
	43. Any hazardous materials (apart from fuel)	
	must be stored within a lockable store with a	
	sealed floor.	
	44. All storage tanks containing hazardous	
	materials must be placed in bunded	
	containment areas with sealed surfaces. The	
	bund walls must be high enough to contain	
	110% of the total volume of the stored	
	hazardous material. These areas should be	
	roofed to avoid contamination of stormwater.	
	roored to avoid contamination of storriwater.

		OFFICER
ENVIRONMENTAL N	MANAGEMENT PROGRAMME	<u> </u>
	45. Material Safety Data Sheets (MSDS) which	
	contain the necessary information pertaining	
	to a specific hazardous substance must be	
	present for all hazardous materials stored on	
	the site.	
	Procedure in the event of a petrochemical	
	spill	
	46. A spill kit needs to be kept on site to address	
	any unforeseen spillages.	
	47. The individual responsible for or who	
	discovers the petrochemical spill must report	
	the incident to the Project Manager,	
	Contractor or ECO.	
	48. The problem must be assessed and the	
	necessary actions required will be	
	undertaken.	
	49. The immediate response must be to contain	
	the spill.	
	50. The source of the spill must be identified,	
	controlled, treated or removed wherever	
	possible.	
	Fire management	
	51. Fire fighting equipment should be present on	
	site at all times.	
	52. All construction staff must be trained in fire	
	hazard control and fire fighting techniques.	
	53. All flammable substances must be stored in	
	dry areas which do not pose an ignition risk	
	to the said substances.	
	54. No open fires will be allowed on site.	

prepared by: SiVEST

		OFFICER
ENVIRONMENTAL M	ANAGEMENT PROGRAMME	
MITIGATION /	1. A security company should be employed to	
METHOD	guard the construction site and monitor	
STATEMENT	access. This company should also be	
	utilised for the operation phase.	
	2. Labour should be transported to and from	
	the site to discourage loitering in adjacent	
	areas and possible increase in crime or	
	disturbance.	
	3. Unsocial activities such as consumption or	
	illegal selling of alcohol, drug utilisation or	
	selling and prostitution on site shall be	
	prohibited. Any persons found to be	
	engaged in such activities should receive	
	disciplinary or criminal action taken against	
	them.	
	4. Only pre-approved staff must be permitted to	
	stay within the staff accommodation which	
	will be provided.	
	5. The site shall be fenced, where necessary to	
	prevent any loss or injury to persons during	
	the construction phase.	
	6. During periods of temporary site closure, the	
	site should be secured to ensure no access	
	to the site. This applies to the construction	
	camp as well.	
	7. No alcohol / drugs to be present on site.	
	8. No firearms allowed on site or in vehicles	
	transporting staff to / from site (unless used	
	by security personnel).	
	9. No harvesting of firewood from the site or

MITIGATION /	1. All contact with the affected parties shall be		
METHOD	courteous at all times. The rights of the		
STATEMENT	affected parties shall be respected at all		
	times.		
	2. The successful completion of the project		
	depends a lot on the good relations with the		
	landowners. The Contractor's Environmental		
	Liaison Officer will thus be the liaison officer		
	for the entire contract.		
	3. The ELO shall be available to investigate all		
	problems arising on the work sites		
	concerning the landowners.		
	4. All negotiations (if required) for any reason		
	shall be conducted between the ECO the		
	landowners and the Contractor (ELO) with		
	the ECO present.		
	5. No verbal agreements shall be made. All		
	agreements shall be recorded properly and		
	all parties shall co-sign the documentation.		
	6. The landowners shall always be kept		
	informed by the ELO about any changes to		
	the construction programme should they be		
	affected.		
	7. The contact numbers of the ELO and the		
	Eskom ECO shall be made available to the		
	landowners. This will ensure open channels		
	of communication and prompt response to		
	queries and claims.		
	A complaints register should be kept on site		
	(A complaints record sheet is provided in		
	annexure A). Details of complaints should be		
	amorare ry. Details of complaints should be

construction site. As so far that it is within the contractors' control, unskilled jobs should	
the contractors' control, unskilled jobs should	
not be amedated to jedecontrol	
elsewhere.	
17. Where project activities lead to the creation	
of informal job opportunities such as food	
stalls, contractors should be encouraged to	
allow such activities as long as it does not	
interfere with the construction activities itself	
or the safety of the construction site, the	
informal vendor and/or the construction	

workers.

IMPACT	SOCIAL ENVIRONMENT	RESPONSIBILITY
	This section deals with social environment	
	and actions that need to be implemented	
	during construction	
PHASE	CONSTRUCTION	MC / ELO
ENVIRONMENT	AL MANAGEMENT PROGRAMME	
	Accommodation for construction workers	
	18. Construction workers should only be housed	
	in rooms within formal houses, i.e. no	
	'backyard shacks' should be permitted – this	
	is to avoid people expanding their houses	
	informally to accommodate construction	
	workers and to ensure that all construction	
	workers enjoy the same standard of living	
	19. A formal application process should be	
	developed whereby households can apply if	
	they wish to house a construction worker.	
	The house must be a formal house and	
	meet certain minimum criteria such as	
	running water, ablution facilities, electricity,	
	furnished room, etc.	
	20. The monthly rent payable to a	
	'landlord/landlady' must be reasonable and	
	should take a proportion of the utilities	
	service bill into account. A formal rental	
	agreement should be in place that sets out	
	the monthly rent amount and the terms and	
	conditions of the rental agreement.	
	21. Remedial steps must be taken against	
	households that accommodate construction	
	workers but who fail to comply with the	
	minimum requirements of the rental	
	agreement. These households should first	
	be requested in writing to rectify any problem	
	areas within a given timeframe and if they	
	fail to do so, the rental agreement should be	
	suspended and the construction worker	
	moved to a different household.	
		ì

IMPACT	SOCIAL ENVIRONMENT	RESPONSIBILITY
	This section deals with social environment	
	and actions that need to be implemented	
	during construction	
PHASE	CONSTRUCTION	MC / ELO
ENVIRONMENTAL M	ANAGEMENT PROGRAMME	
	Appropriate Conduct	
	22. Instruct construction workers, prior to arrival,	
	as to the appropriate conduct on site, and to	
	control substance abuse/use. Inform them of	
	the local norms, languages, and custom.	
	Conflict	
	23. Problem areas that are brought under the	
	attention of the contractor should be rectified	
	immediately. If the contractor is unable to so,	
	this should be communicated to the	
	landowner along with a plan on how and	
	when the problem will be addressed. The	
	landowner should be given regular feedback	
	on the matter.	
	Implementation of HIV/AIDS prevention plan	
	24. Eskom or its contractor should appoint a	
	service provider or local NGO to develop,	
	implement and manage an HIV/AIDS	
	prevention programme. The service provider	
	or NGO should specialise in the field of	
	HIV/AIDS.	
	25. The HIV/AIDS prevention programme should	
	extend to the local community and should	
	pay special attention to vulnerable groups	
	such as women and youth.	

## 2.3.17 Community Engagement

Table 23: Community Engagement

IMPACT	COMMUNITY ENGAGEMENT This section deals with surrounding community and actions that need to be implemented during construction	RESPONSIBILITY
PHASE	CONSTRUCTION	ELO
ENVIRONMENTAL M	ANAGEMENT PROGRAMME	
MITIGATION	<ol> <li>A communication guideline to be drafted and agreed upon with authority representatives and affected communities.</li> <li>Open and transparent community engagement to be followed as culturally appropriate.</li> <li>Records (written) to be kept of all community engagements (e.g. complaints, resolutions, etc)</li> </ol>	

## 2.3.18 Visual Impact

Table 24: Visual Impact

IMPACT	VISUAL This section deals with visual issues and actions that need to be implemented during construction	RESPONSIBILITY
PHASE	CONSTRUCTION	ELO
ENVIRONMENTAL N	IANAGEMENT PROGRAMME	
MITIGATION /	General	
METHOD	1. Construction activities must not occur at	
STATEMENT	night and lighting should only be erected where absolutely necessary.	
	2. Construction camps and equipment storage	
	facilities are to be shielded with shade netting.	
	3. Construction traffic must not deviate from	
	designated routes or access roads.

22 February 2013 Page 85

4.	Construction areas are to be kept clean and	
	tidy.	
5.	Measures must be taken to suppress dust	
	arising from construction activities.	
6.	Labour being transported to the site must	
	take cognisance of litter and waste	
	concerns.	
7.	Equipment being transported to the site	
	must be covered with tarpaulins.	
8.	Topsoil stockpiles must be well managed	
	and seeded when possible if not utilised	
	within three months.	
9.	It is recommended that equipment be stored	
	discreetly so as not to increase visual	
	impacts.	
10	. Construction must be conducted in the	
	shortest possible time in order to reduce	
	visual impacts.	

## 2.3.19 Heritage and Cultural Resources

Table 25: Heritage and Cultural Resources

IMPACT	HERITAGE AND CULTURAL RESOURCES This section deals with heritage and cultural issues as well as actions that need to be implemented during construction	RESPONSIBILITY
PHASE	CONSTRUCTION	ELO
ENVIRONMENTAL M	ANAGEMENT PROGRAMME	
MITIGATION / METHOD STATEMENT	<ol> <li>A responsible archaeologist must be appointed to inspect the operational areas of the site in order to identify any significant material being unearthed, and to make the correct judgment on actions to be taken.</li> <li>A permit in terms of section 34 of the National Heritage Resources Act 1999 (Act 25 of 1999) must be obtained, if any archaeological resources, such as built structures older than 60 years, sites of cultural significance associated with oral</li> </ol>	

- histories, burial grounds or graves and cultural landscapes, are discovered during the construction phase of the project and which will be damaged, destroyed, altered, or disturbed as a result of the project.
- A destruction permit will be required for the farmstead and structure ACO02 under the Section 34 of the NHRA.
- 4. An archaeologist must immediately be appointed should any artefacts be unearthed during construction.
- Should substantial fossils be uncovered they should be left in situ, safeguarded by the Environmental Control Officer and reported to SAHRA and a professional palaeontologist.
- A poster reminding workers of the possibility of finding archaeological sites, should be kept on site.
- An archaeological monitoring and feedback strategy must be developed to ensure effective monitoring of the site and to provide feedback reports to the client and SAHRA.

#### SITE SPECIFIC MITIGATION

- Prior to construction activities commencing, the fence around the cemetery should be repaired or a proper fence must be built with a 10 meter buffer.
- 9. If the development crosses at the farm worker sites (PGS11-13 and ACO13) a watching brief and monitoring during the construction phase is required as there could be a possibility of infant burials. It is recommended that test excavations be conducted to determine the presence or absence of infant burials at these sites.
- 10. The process described in section 36 of the National Heritage Resources Act 1999 ( Act 25 of 1999) must be followed should the development take place where there are

**ESKOM HOLDINGS SOC LIMITED** 

graves older than 60 years.	
11. Should the Humansrus farmstead ruins	
(ACO02) not be excluded from the	
development area, a destruction permit	
under Section 34 of the NHRA must be	
obtained.	

## 2.4 Operation Phase

## 2.4.1 Construction Site Decommissioning

Table 26: Construction Site Decommissioning

IMPACT	CONSTRUCTION SITE DECOMMISSIONING	RESPONSIBILITY
	This section deals with the demolishing of	
	the construction camp and the actions that	
	need to be implemented	
PHASE	OPERATION	Main contractor /
		Developer / ECO /
		ELO
ENVIRONMENTAL M	ANAGEMENT PROGRAMME	
MITIGATION /	Removal of equipment	
METHOD	1. All structures comprising the construction	
STATEMENT	camp are to be removed from site.	
	2. The area that previously housed the	
	construction camp is to be checked for spills	
	of substances such as oil etc, and these	
	shall be remediated.	
	3. All hardened surfaces within the	
	construction camp area should be ripped, all	
	imported materials removed, and the area	
	shall be top soiled and regressed using the	
	guidelines set out in the re-vegetation that	
	forms part of this document.	
	Temporary services	
	4. The Contractor must arrange the	
	cancellation of all temporary services.	
	5. A copy of all weigh-bridge certificates from	
	waste disposed are to be presented to the	
	ECO.	
	6. Temporary roads must be closed and	
	access across these, blocked.	
	7. All areas where temporary services were	
	installed are to be rehabilitated to the	
	satisfaction of the ECO.

	Associated infrastructure	
	8. Surfaces are to be checked for waste	
	products from activities such as concreting	
	or asphalting and cleared in a manner	
	approved by the Engineer.	
	9. All surfaces hardened due to construction	
	activities are to be ripped and imported	
	material thereon removed.	
	10. All rubble is to be removed from the site to	
	an approved disposal site as approved by	
	the Engineer. Burying of rubble on site is	
	prohibited.	
	11. The site is to be cleared of all litter.	
	12. The Contractor is to check that all	
	watercourses are free from building rubble,	
	spoil materials and waste materials.	
	13. Fences, barriers and demarcations	
	associated with the construction phase are	
	to be removed from the site unless	
	stipulated otherwise by the Engineer.	
	14. All residual stockpiles must be removed to	
	spoil or spread on site as directed by the	
	Engineer.	
	15. All leftover building materials must be	
	returned to the depot or removed from the	
	site.	
	16. The Contractor must repair any damage that	
	the construction works has caused to	
	neighbouring properties, specifically, but not	
	limited to, damage caused by poor storm	
	water management.	

IMPACT	CONSTRUCTION SITE DECOMMISSIONING This section deals with the demolishing of the construction camp and the actions that need to be implemented	RESPONSIBILITY
PHASE	OPERATION	Main contractor / Developer / ECO /

IMPACT		REHABILITATION	RESPONSIBILITY
IIVIFACI			RESPONSIBILITY
		This section deals with the issues relating to	
		rehabilitation after construction	
PHASE		OPERATION	Developer
ENVIRONMENTAL	L MA	NAGEMENT PROGRAMME	
MITIGATION	/	Rehabilitation	
METHOD		1. All damaged areas shall be rehabilitated	
STATEMENT		upon completion of the contract	
		2. A mixture of vegetation seed can be used	
		provided the mixture is carefully selected to	
		ensure the following:	
		<ul> <li>Annual and perennial species are</li> </ul>	
		chosen.	
		<ul> <li>Pioneer species are included.</li> </ul>	
		<ul> <li>All the species shall not be edible.</li> </ul>	
		<ul><li>Species chosen will grow in the</li></ul>	
		area under natural conditions.	
		<ul> <li>Root systems must have a binding</li> </ul>	
		effect on the soil.	
		<ul> <li>The final product should not cause</li> </ul>	
		an ecological imbalance in the	
		area.	

IMPACT	REHABILITATION	RESPONSIBILITY
	This section deals with the issues relating to	
	rehabilitation after construction	
PHASE	OPERATION	Developer
ENVIRONMENTAL M	ANAGEMENT PROGRAMME	
	<ul> <li>3. To get the best results in a specific area, it is a advisable to consult with a vegetation specialist. Seed distributors can also give valuable advice as to the mixtures and amount of seed necessary to seed a certain area.</li> <li>4. Re-vegetation of the disturbed site is aimed at approximating as near as possible the natural vegetative conditions prevailing prior</li> </ul>	
	to construction.  5. All natural areas impacted during construction must be rehabilitated with locally indigenous grasses typical of the representative botanical unit.	
	<ul><li>6. Rehabilitation must take place in a phased approach as soon as possible.</li><li>7. Rehabilitation process must make use of species indigenous to the area. Seeds from surrounding seed banks can be used for reseeding.</li></ul>	
	8. Rehabilitation must be executed in such a manner that surface run-off will not cause erosion of disturbed areas.	
	Planting of indigenous tree species in areas not to be cultivated or built on must be encouraged.	
	Maintenance	
	10. The servitude needs to be monitored on a monthly basis for the first year to identify the emergence of alien species and any erosion concerns.	

Table 28: Operation and Maintenance

IMPACT	OPERATION AND MAINTENANCE	RESPONSIBILITY
	This section deals with the potential impacts	
	that could result from the operation and	
	maintenance of the line and substation.	
PHASE	OPERATION	ESKOM
ENVIRONMENTAL M	ANAGEMENT PROGRAMME	
MITIGATION /	Maintenance	
METHOD	1. All applicable standards, legislation, policies	
STATEMENT	and procedures must be adhered to during	
	operation.	
	2. Regular ground inspection of the servitude	
	must take place to monitor their status.	
	3. Landowner conditions for accessing the	
	servitude must be adhered to, and all gates	
	must be kept open / closed subject to	
	landowner requirements.	
	4. Only authorised Eskom personnel must	
	access the servitude and properties that are	
	required to be traversed in order to access	
	the servitude	
	5. No new roads to be constructed through	
	wetlands and drainage lines.	
	6. It is advisable that local contractors be	
	utilised to clear the servitude.	
	Public awareness	
	7. The emergency preparedness plan must be	
	ready for implementation at all times should	
	an emergency situation arise.	

## 2.4.4 Air Quality

ENVIRONMENTAL MAN	NAGEMENT PROGRAMME	
	throughout the site should be controlled.	
	13. All exotic vegetation must be removed	
	from the site (if present).	
	Birds Collisions and Electrocutions	
	14. New bird diverters must be maintained on	
	the power lines.	
	15. Maintenance crews to monitor for bird	
	collisions and to mitigate for this impact	
	within areas identified as hotspot collision	
	areas not previously identified during the	
	pre-construction and construction phase.	

#### 2.4.6 Surface Water Resources

IMPACT	SURFACE WATER	RESPONSIBILITY
	This section deals with the issues relating to	
	surface water during operation	
PHASE	OPERATION	Developer
ENVIRONMENTAL N	ANAGEMENT PROGRAMME	
MITIGATION /	Site Access	
METHOD	1. It is crucial that existing roads are used so	
STATEMENT	that damage is limited. Where new service	
	roads are required in the watercourses and	
	the necessary environmental authorisations	
	and water use licences are obtained, these	
	roads must be limited in extent (i.e. go	
	directly to the desired tower) and will need to	
	be maintained for erosion.	
	2. Ideally, if service roads are required inside	
	the watercourses, coarse gravel should be	
	used as the infill. This material will not erode	
	away after rainfall events and will provide a	
	relatively solid foundation when surface water	

accumulates.		s. Ac	lditionally,	erc	sion	will	be
limited	by	this	material	as	oppo	osed	to
expose	d dir	t road	S.				

 If dirt roads will be the means of access, these will have to be regularly checked for erosion. This should be done on a weekly to monthly basis and after short or long periods of heavy rainfall or after long periods of sustained rainfall.

#### **Erosion control**

4. Where erosion begins to take place, this must be dealt with immediately to prevent severe erosion damage to the wetlands. Should severe erosion occur, a rehabilitation plan will be required and Input from a suitably qualified wetland or aquatic specialist must be obtained.

#### 2.4.7 Health and Safety

Table 31: Health and Safety

IMPACT	HEALTH AND SAFETY This section deals with the issues relating to health and safety during operation	RESPONSIBILITY
PHASE	OPERATION	Developer
ENVIRONMENTAL MA	NAGEMENT PROGRAMME	
MITIGATION /	Emergency evacuation plan	
METHOD	1. Upon completion of the construction	
STATEMENT	phase, an emergency evacuation plan must be drawn up to ensure the safety of the staff and surrounding land users in the case of an emergency.	
	Maintenance  2. The servitude is to be regularly maintained. A maintenance schedule must be drawn up and records of all	

IMPACT	HEALTH AND SAFETY	RESPONSIBILITY
	This section deals with the issues relating	
	to health and safety during operation	
	maintenance kept.	
	Fire safety	
	3. Firefighting equipment in the form of fire	
	hydrants or fire extinguishers must be	
	available on the substation site. These	
	must be regularly maintained by an	
	appropriate company.	
	Storage and handling of hazardous waste	
	4. A spill kit needs to be kept on site to	
	address any unforeseen spillages.	
	5. Transport of all hazardous substances	
	must be in accordance with the relevant	
	legislation.	

## 2.4.8 Visual Impact

Table 32: Visual Impact

IMPACT	VISUAL IMPACT	RESPONSIBILITY
	This section deals with the issues relating to	
	visual impacts during operation	
PHASE	OPERATION	Developer
ENVIRONMENTAL I	NANAGEMENT PROGRAMME	
MITIGATION	Maintenance and lighting	
METHOD	1. High standards of maintenance and	
STATEMENT	management of the landscaping should	
	be carried out in accordance with the	
	best possible practice to ensure that	
	the landscaping ensures that the power	
	line blends in with the current visual	
	environment, by enhancing natural	
	features such as trees and vegetation	
	as much as possible.	
	2. The servitude and surrounds must be	

IMPACT	VISUAL IMPACT	RESPONSIBILITY
	This section deals with the issues relating to

## 2.5 Decommissioning phase

Mitigation measures implemented during construction with regards to the construction camp and equipment will remain the same for the decommissioning phase when a construction camp will need to be established again.

#### 2.5.1 Ongoing Stakeholder involvement

This is the process that is recommended if the substations sites are decommissioned.

Table 33: Ongoing Stakeholder involvement

IMPACT	ONGOING STAKEHOLDER INVOLVEMENT	RESPONSIBILITY
	This section relates to the stakeholder	
	involvement that needs occur during	
	decommissioning	
PHASE	DECOMMISSIONING	ESKOM
ENVIRONMENTAL N	MANAGEMENT PROGRAMME	
MITIGATION /	1. Community to be notified, as culturally	
METHOD	appropriate, timeously of the planned	
STATEMENT	decommissioning, e.g:	
	<ul> <li>Proposed decommissioning start date;</li> </ul>	
	and	
	<ul> <li>Process to be followed.</li> </ul>	
	2. Recommend that a meeting with community	
	leader(s) be held before decommissioning	
	commence to inform them:	
	What activities will take place during	
	the decommissioning phase.	
	How these activities will impact upon	
	the communities and/or their	
	properties.	
	<ul> <li>Regarding the timeframes of</li> </ul>	
	scheduled activities	
	3. Regular interaction between Eskom and	
	community leader(s) during the	
	decommissioning phase	
	4. A reporting office / channel to be established	
	should community members experience	

**ESKOM HOLDINGS SOC LIMITED** 

problems with contractors / sub-contractors
during the decommissioning phase.
5. A register to be kept of problems reported by
community members and the steps taken to
address / resolve it.

## 2.5.2 Community health and safety

Table 34: Community health and safety

IMPACT	COMMUNITY HEALTH AND SAFETY	RESPONSIBILITY
	This section deals with the issues relating to	
	health and safety during decommissioning	
PHASE	DECOMMISSIONING	ELO

STATEMENT	Maintain equipment to reduce exhaust emissions.		

#### 3 CONCLUSION

The environmental and social impacts of the project were spread through the four project phases. There were both positive and some negative project impacts identified through the BA. The following section briefly describes some of the major impacts and the proposed mitigation measures within each of the project phases.

#### 3.1 Pre-Construction Phase

The first site activities before mobilization of equipment will be a survey, required for final design of the switchyard and power line structures. It is advisable all walk downs by the faunal, floral, avifaunal, heritage and surface water specialists be undertaken, and be used to inform the final tower locations prior to the finalisation of tower positions. The avifaunal walk down should identify the spans that will require mitigation devices to be installed, if required. In addition, a floral walk down should be undertaken in the flowering season once the tower positions have been pegged in order to identify any affected RDL floral species should be removed and rescued. A detailed geotechnical investigation should also be undertaken along the final corridor alignment at the pylon locations and at the final switchyard location to prove the founding conditions and assess the dolomite stability.

There could be negative impacts on land associated with the construction of camps (temporary loss) and storage of construction materials especially if such construction is carried out on agriculturally productive land. Expectations of improvement in livelihood among locals must be addressed through public participation. Construction contracts will include environmental monitoring and management procedures and requirements. These must be in place prior to the commencement of any construction activities.

#### 3.2 Construction Phase

This phase of the activity will have both positive and negative impacts. The positive impacts are some employment opportunities offered to the construction workers and any other labourer who will be hired to provide their services during the construction phase. The negative impacts would include wastes generated, accidents, health and safety, air, dust and noise pollution, vegetation clearance, soil erosion, socio-environmental issues, loss of trees, and compaction of soil. Most of the negative impacts are minor and temporary. To mitigating negative impacts, the contractor shall ensure that all staff have adequate protective clothing and are adequately trained. The whole range of mitigation measures are however, outlined in the EMPr in this regard.

#### 3.3 Operational Phase

The proposed project will have minimal negative effects which mainly relate to loss of aesthetic value and habitat as well as nuisance to affected landowners.

#### 3.4 Decommissioning Phase

As with any project, the facilities used in this project will have a lifespan after which they may no longer be cost effective to continue with operation or may degrade and become inoperable. At that time, the project would be decommissioned, and the existing equipment removed and most likely replaced. The mitigation measures highlighted in the construction phase will once again become applicable as the construction of new infrastructure would essentially be associated with similar activities and would likely result in similar impacts.

The disposal of materials from the decommissioned plant is not viewed as high risk. Much of the material would be recyclable (steel structures) or inert (insulators, concrete foundations, etc.). These materials would however, need to be disposed of at a formal waste disposal or recycling centre.

Based on the above information, it is unlikely that the project will have many adverse social and environmental impacts. Most adverse impacts will be of a temporary nature during the construction phase and can be managed to acceptable levels with implementation of the recommended mitigation measures for the project such that the overall benefits from the project will greatly outweigh the few adverse impacts. All the negative impacts will either be moderate or lesser in rating and could be easily mitigated. Generally, the proposed power line and substation will result in appreciable benefits to the people in the project area of influence and bring opportunities for development in the area.

### MANAGEMENT OF SOILS: GUIDELINES

#### Topsoil

#### Source of topsoil

- Topsoil shall be striped from all areas that are to be utilised during the construction period and where permanent structures and access is required. These areas will include temporary and permanent access roads, construction camps, and lay down areas. Topsoil shall be stripped after clearing of woody vegetation and before excavation or construction commences.
- The topsoil is regarded as the top 300mm of the soil profile irrespective of the fertility appearance, structure, agricultural potential, fertility and composition of the soil.

#### Topsoil stripping

- Soil shall be stripped to a minimum depth of 150mm and maximum depth of 300mm or to the depth of bedrock where soil is shallower than 300mm. Herbaceous vegetation, overlying grass and other fine organic matter shall not be removed from the stripped soil.
- No topsoil which has been stripped shall be buried or in any other way be rendered unsuitable for further use by mixing with spoil or by compaction using machinery.
- Topsoil shall preferably be stripped when it is in a dry condition in order to prevent compaction.

#### Topsoil stockpiling

- The Consulting Engineer or Environmental Control Officer shall stockpile stripped topsoil in areas, which have been approved. Soil stockpiles may take the form of windows.
- To prevent erosion, material stockpiled for long periods (2 weeks) should be retained in a bermed area.
- Topsoil, mulch and subsoil stockpiles must be placed in higher-lying areas of the sit, and must not be positioned within stormwater channels or areas of ponding.
- Topsoil stripped from different soil zones shall be stockpiled separately and clearly identified as such. Under no circumstances shall topsoil obtained from different soil zones be mixed.
- Soil stockpiles shall not be higher than 2m or stored for a period longer than one year. The slopes of soil stockpiles shall not be steeper than 1 vertical to 2.5 horizontal.
- No vehicles shall be allowed access onto the stockpiles after they have been placed. Topsoil stockpiles shall be clearly demarcated in order to prevent vehicle access and for later identification when required.
- Soil stockpiles must not become contaminated with oil, diesel, petrol, garbage or any other material, which may inhibit the later growth of vegetation in the soil.

After topsoil removal has been completed, the Contractor shall apply soil conservation measures to the stockpiles where and as directed by the Consulting Engineer or Environmental Control Officer. This may include the use of erosion control fabric or grass seeding.

#### Topsoil replacement

- Topsoil shall be replaced to a minimum depth of 75mm over all areas where it has been stripped and over disused borrow pits, after construction in those areas has ceased. Topsoil placement shall follow as soon as construction in an area has ceased.
- All areas onto which topsoil is to be spread shall be graded to the approximate original landform with maximum slopes of 1:25 and shall be ripped prior to topsoil placement. The entire area shall be ripped parallel to the contours to a minimum depth of 300mm.
- Topsoil shall be placed in the same soil zone from which it had been stripped. However, if there is insufficient topsoil available from a particular soil zone to produce the minimum specified depth, topsoil may be brought from other soil zones at the approval of the Consulting Engineer or Environmental Control Officer.
- Where topsoil that has been stripped by the Contractor is insufficient to provide the minimum specified depth, the Contractor shall obtain suitable substitute material from other sources at no cost to the employer. The suitability of the substitute material shall be determined by means of soil analyse, which are acceptable to the Consulting Engineer or Environmental Control Officer.
- No vehicles shall be allowed access onto or through topsoil after it has been reinstated.
- After topsoil reinstatement is complete, cleared and stockpiled vegetative matter shall be spread randomly by hand over the top soiled area. The vegetative material must be replaced on the areas from where it has been removed.

## **Annexure C**

# ESKOM REQUIREMENTS FOR WORK IN OR NEAR ESKOM SERVITUDES.

- 1) Eskom's rights and services must be acknowledged and respected at all times.
- 2) Eskom shall at all times retain unobstructed access to and egress from its servitudes.
- 3) Eskom's consent does not relieve the developer from obtaining the necessary statutory, land owner or municipal approvals.
- 4) Any cost incurred by Eskom as a result of non-compliance to any relevant environmental legislation will be charged to the developer.
- 5) If Eskom has to incur any expenditure in order to comply with statutory clearances or other regulations as a result of the developer's activities or because of the presence of his equipment or installation within the servitude restriction area, the developer shall pay such costs to Eskom on demand.
- 6) The use of explosives of any type within 500 metres of Eskom's services shall only occur with Eskom's previous written permission. If such permission is granted the developer must give at least fourteen working days prior notice of the commencement of blasting. This allows time for arrangements to be made for supervision and/or precautionary instructions to be issued in terms of the blasting process. It is advisable to make application separately in this regard.
- 7) Changes in ground level may not infringe statutory ground to conductor clearances or statutory visibility clearances. After any changes in ground level, the surface shall be rehabilitated and stabilised so as to prevent erosion. The measures taken shall be to Eskom's satisfaction.
- 8) Eskom shall not be liable for the death of or injury to any person or for the loss of or damage to any property whether as a result of the encroachment or of the use of the servitude area by the developer, his/her agent, contractors, employees, successors in title, and assignees. The developer indemnifies Eskom against loss, claims or damages including claims pertaining to consequential damages by third parties and whether as a result of damage to or interruption of or interference with Eskom's services or apparatus or otherwise. Eskom will not be held responsible for damage to the developer's equipment.
- 9) No mechanical equipment, including mechanical excavators or high lifting machinery, shall be used in the vicinity of Eskom's apparatus and/or services, without prior written permission having been granted by Eskom. If such permission is granted the developer must give at least seven working days' notice prior to the commencement of work. This allows time for

- arrangements to be made for supervision and/or precautionary instructions to be issued by the relevant Eskom Manager
- 10) Note: Where and electrical outage is required, at least fourteen work days are required to arrange it.
- 11) Eskom's rights and duties in the servitude shall be accepted as having prior right at all times and shall not be obstructed or interfered with.
- 12) Under no circumstances shall rubble, earth or other material be dumped within the servitude restriction area. The developer shall maintain the area concerned to Eskom's satisfaction. The developer shall be liable to Eskom for the cost of any remedial action which has to be carried out by Eskom.
- 13) The clearances between Eskom's live electrical equipment and the proposed construction work shall be observed as stipulated by Regulation 15 of the Electrical Machinery Regulations of the Occupational Health and Safety Act, 1993 (Act 85 of 1993).
- 14) Equipment shall be regarded electrically live and therefore dangerous at all times.
- 15) In spite of the restrictions stipulated by Regulation 15 of the Electrical Machinery Regulations of the Occupational Health and Safety Act, 1993 (Act 85 of 1993), as an additional safety precaution, Eskom will not approve the erection of houses, or structures occupied or frequented by human beings, under the power lines or within the servitude restriction area.
- 16) Eskom may stipulate any additional requirements to highlight any possible exposure to Customers or Public to coming into contact or be exposed to any dangers of Eskom plant.
- 17) It is required of the developer to familiarise himself with all safety hazards related to Electrical plant.
- 18) Any third party servitudes encroaching on Eskom servitudes shall be registered against Eskom's title deed at the developer's own cost. If such a servitude is brought into being, its existence should be endorsed on the Eskom servitude deed concerned, while the third party's servitude deed must also include the rights of the affected Eskom servitude.
- 19) Eskom request that any wind turbine structures be placed at least four (4) times the blade diameter of the wind turbine to be used away from any Eskom High voltage power line servitudes (220kV and above). This is to allow for future possible expansion of the Eskom servitude to allow for additional power lines to be constructed parallel to existing lines, upgrading of existing lines to higher voltage Transmission power lines in future, combat the effects of turbulence from the turbines on the power lines, limit the possible effect of electromagnetic interference and to decrease the risk of catastrophic failure of the turbine to impact on the power line. Eskom does a lot of live line maintenance work on High Voltage lines and thus use helicopters in close proximity to high voltage lines. Turbines in close

proximity to Eskom Microwave radio sites and substations should also not be placed within the line of site of the antennae on such sites and towers.
