To SAHRA:

With reference to the permit application (<https://sahris.sahra.org.za/cases/palaeoproteonomics-preliminary-study>). Information for the bovid samples is limited, however given available information on the stratigraphic relationships between the non-hominin and hominin teeth there is a reasonable assumption that they are from the same horizon. This supports the feasibility and need for the analysis of the non-hominin teeth as a precursor to destructive analysis of any hominin teeth.

Regards,

A handwritten signature in black ink, appearing to read 'Rebecca Rogers Ackermann', with a large, sweeping flourish extending to the right.
