TO WHOM BE CONCERN.

Export of a block of breccia from MB (Bolt's Farm)

The aim is to study the preservation of the bone in the breccia in order to discuss about the validity of the biochemical signals (isotopes, trace elements) picked up in the mineral phase of the bone (hydroxylapatite carbonate) by Alain Person.

Different technics will be used: estimate of the index of histological preservation on a thin section of a bone, measurement of the index of cristallinity using X-ray diffraction, FTIR, fluorine dosing using specific electrodes and ration Calcium/Phosphorus mesured out using ICP.

This is a destructive method.
