Applications for Environmental Authorisation: Each renewable energy facilitity will be constructed as a separate stand-alone project and therefore, separate Scoping and Environmental Impact Assessment (S&EIA) processes will be undertaken for each facility. Similarly, the grid connection solution will be subjected to a separate Basic Assessment (BA) process which will consider feasible alternatives for the power line corridors. Each respective renewable facility project and the grid connection infrastructure require applications for Environmental Authorisation (EA) in terms of the National Environmental Management Act (No. 107 of 1998) (NEMA) and 2014 EIA Regulations (GNR 326), which are required to be supported by S&EIA processes for each renewable energy facilitity and a BA process for the grid connection infrastructure.

Public Participation Process: Savannah Environmental (Pty) Ltd has been appointed as the environmental consultant responsible for undertaking the respective S&EIA, BA and Public Participation processes in support of the applications for EA. Due to the proximity of the renewable energy facilities and grid connection solution to one another, the EIA processes and public participation processes for the projects will be undertaken concurrently, providing the public with an opportunity to understand the full extent of the development proposed and comment on each of the projects. **To obtain further information on the projects and to register on the project databases, please submit your name, contact information and interest in the project, in writing, to:**

NOTICE OF ENVIRONMENTAL IMPACT ASSESSMENT, BASIC ASSESSMENT & PUBLIC PARTICIPATION PROCESSES FOR THE PROPOSED DEVELOPMENT OF THE GREAT KAROO CLUSTER OF RENEWABLE ENERGY FACILITIES & GRID CONNECTION INFRASTRUCTURE, NEAR RICHMOND, NORTHERN CAPE PROVINCE

Applicant: Great Karoo Renewable Energy (Pty) Ltd.

Proposed Activity: Establishment of three (3) Solar Photovoltaic (PV) Energy Facilities, two (2) Wind Energy Facilities & grid connection infrastructure comprising a 132kV central collector substation & a 132kV power line to enable the connection of five (5) renewable energy facilities to the national grid for the evacuation of the generated electricity. The connection point to the national grid will be the existing Eskom Gamma Substation. Infrastructure associated with each project includes:

Solar Energy Facilities	Wind Energy Facilities	Grid Connection Infrastructure
» Solar PV array comprising PV modules & mounting structures. » Inverters & transformers. » Cabling between the panels. » 33/132kV onsite facility substation. » Cabling from the onsite substation to the collector substation (either underground or overhead). » Electrical & auxiliary equipment required at the collector substation that serves that solar energy facility, including switchyard/bay, control building, fences, etc. » Battery Energy Storage System (BESS). » Site offices & maintenance buildings, including workshop areas for maintenance & storage. » Laydown areas. » Access roads & internal distribution roads.	» Wind turbines. » Concrete turbine foundations & turbine hardstands. » Inverters & transformers. » Temporary laydown areas which will accommodate storage & assembly areas. » Cabling between the turbines, to be laid underground where practical. » A temporary concrete batching plant. » 33/132kV onsite facility substation. » Underground cabling from the onsite substation to the collector substation. » Electrical & auxiliary equipment required at the collector substation that serves that wind energy facility, including switchyard/bay, control building, fences, etc. » Battery Energy Storage System (BESS). » Access roads & internal distribution roads. » Site offices & maintenance buildings, including workshop areas for maintenance & storage.	» Central collector substation which consists of: ∗ 33/132kV collector substation. ∗ Associated equipment, infrastructure, & buildings. ∗ Temporary & permanent laydown areas. » Distribution Line: ∗ A double-circuit 132kV distribution line to connect the central collector 132kV substation to the existing Eskom Gamma Substation will be constructed.

Project Location: The five (5) proposed renewable energy facilities, along with their associated grid connection infrastructure, are located approximately 35km South-West of Richmond along the N1 & approximately 80km South-East of Victoria West along the R63 in the Northern Cape Province, within the Ubuntu Local Municipality, & the Pixley Ka Seme District Municipality. A portion (approximately 2km) of the 132kV power line that will connect the 132kV central collector substation to the Eskom Gamma Substation falls within the Beaufort West Local Municipality which forms part of the greater Cape Winelands District Municipality in the Western Cape Province.

Scoping & Environmental Impact Assessment (S&EIA) & Basic Assessment (BA) Processes: In terms of Sections 24 & 24D of the National Environmental Management Act (No 107 of 1998), as read with Government Notice R324 – R327, as amended, a S&EIA process is required for each renewable energy facility. Similarly, a BA process is required for the grid connection infrastructure. Savannah Environmental is undertaking the required S&EIA, BA, & public participation processes for these projects.

Scoping Reports & & BA Report available for review & comment: The Scoping &Reports for each of the renewable energy facilities are available for download, review, & comment on the Savannah Environmental website (see applicable link in table above). The 30-day review & comment period of the Scoping Reports is from **Friday, 12 November 2021** until **Monday, 13 December 2021**. The availability of the BA Report for the grid connection infrastructure for a 30-day review and comment period will be communicated in due course.

***Information Session*:** Interested and affected parties (I&APs) are invited to attend the Information Session (poster display) which will take place at the Richmond Show Grounds on **Thursday, 2 December 2021** at **14:00**.
