#### » INTRODUCTION

# 1. Background

The National Environmental Management Act, 1998 (Act No. 107 of 1998) (NEMA) requires that an environmental management programme (EMPr) be submitted where an environmental impact assessment (EIA) has been identified as the environmental instrument to be utilised as the basis for a decision on an application for environmental authorisation (EA). The content of an EMPr must either contain the information set out in Appendix 4 of the Environmental Impact Assessment Regulations, 2014, as amended (EIA Regulations) or must be a generic EMPr relevant to an application as identified and gazetted by the Minister in a government notice. Once the Minister has identified, through a government notice that a generic EMPr is relevant to an application for EA, that generic EMPr must be applied by all parties involved in the EA process, including but not limited to the applicant and the competent authority (CA).

# 2. Purpose

This document constitutes a generic EMPr relevant to applications for the development or expansion of substation infrastructure for the transmission and distribution of electricity, and all listed and specified activities necessary for the realisation of such infrastructure.

# 3. Objective

The objective of this generic EMPr is to prescribe and pre-approve generally accepted impact management outcomes and impact management actions, which can commonly and repeatedly be used for the avoidance, management and mitigation of impacts and risks associated with the development or expansion of substation infrastructure for the transmission and distribution of electricity. The use of a generic EMPr is intended to reduce the need to prepare and review individual EMPrs for applications of a similar nature.

#### 4. Scope

The scope of this generic EMPr applies to the development or expansion of substation infrastructure for the transmission and distribution of electricity requiring EA in terms of NEMA. This generic EMPr applies to activities requiring EA, mainly activity 11 and 47 of the Environmental Impact Assessment Regulations Listing Notice 1 of 2014, as amended, and activity 9 of the Environmental Impact Assessment Regulations Listing Notice 2 of 2014, as amended, and all associated listed or specified activities necessary for the realization of such infrastructure.

# 5. Structure of this document

This document is structured in three parts with an Appendix as indicated in the table below:

| Part | Section | Heading                            | Content   |
|------|---------|------------------------------------|---|
|      |         | -                                  |   |
| Α    |         | Provides general guidance          | Definitions, acronyms, roles & responsibilities and   |
|      |         | and information and is <b>not</b>  | documentation and reporting.  |
|      | _       | legally binding                    |   |
| В    | 1       | Pre-approved generic EMPr template | Contains generally accepted impact management outcomes and impact management actions required for the avoidance, management and mitigation of impacts and risks associated with the development or expansion of substation infrastructure for the transmission and distribution of electricity, which are presented in the form of a template that has been preapproved.      |
|      |         |                                    | The template in this section is to be completed by the contractor, with each completed page signed and dated by the holder of the EA prior to commencement of the activity.   |
|      |         |                                    | Where an impact management outcome is not relevant, the words "not applicable" can be inserted in the template under the "responsible persons" column.  |
|      |         |                                    | Once completed and signed, the template represents the EMPr for the activity approved by the CA and is legally binding. The template <b>is not required</b> to be submitted to the CA as once the generic EMPr is gazetted for implementation, it has been approved by the CA.  |
|      |         |                                    | To allow interested and affected parties access to the pre-approved EMPr template for consideration through the decision-making process, the EAP on behalf of the applicant /proponent must make the hard copy of this EMPr available at a public location and where the applicant has a website, the EMPr should also be made available on such publicly accessible website. |
|      | 2       | Site specific information          | Contains preliminary infrastructure layout and a declaration that the applicant/holder of the EA  |

| Part | Section | Heading                                    | Content   |
|------|---------|--|---|
|      |         |  | will comply with the pre-approved generic EMPr template contained in <u>Part B: Section 1</u> , and understands that the impact management outcomes and impact management actions are <b>legally binding</b> . The preliminary infrastructure layout must be finalized to inform the final EMPr that is to be submitted with the basic assessment report (BAR) or environmental impact assessment report (EIAR), ensuring that all impact management outcomes and impact management actions have been either preapproved or approved in terms of <u>Part C</u> .  |
|      |         |  | This section <b>must be</b> submitted to the CA together with the final BAR or EIAR. The information submitted to the CA will be considered to be incomplete should a signed copy of <u>Part B: section 2</u> not be submitted. Once approved, this Section forms part of the EMPr for the development and is legally binding.  |
| C    |         | Site specific sensitivities/<br>attributes | If any specific environmental sensitivities/ attributes are present on the site which require site specific impact management outcomes and impact management actions, not included in the pre-approved generic EMPr, to manage impacts, these specific impact management outcomes and impact management actions must be included in this section. These specific environmental attributes must be referenced spatially and impact management outcomes and impact management outcomes and impact management actions must be provided. These specific impact management outcomes and impact management actions must be presented in the format of the preapproved EMPr template (Part B: section 1)  This section will not be required should the site contain no specific environmental sensitivities or |
|      |         |  | contain no specific environmental sensitivities or attributes. However, if <u>Part C</u> is applicable to the site, it <b>is required</b> to be submitted together with the BAR or EIAR, for consideration of, and decision on, the application for EA. The information in this section must be prepared by an EAP and must contain his/her name and expertise including a curriculum vitae. Once   |

| Part | Section | Heading | Content   |
|------|---------|---------|---|
|      |         |         | approved, Part C forms part of the EMPr for the site and is legally binding.  |
|      |         |         | This section applies only <b>to additional</b> impact management outcomes and impact management actions that are necessary for the avoidance, management and mitigation of impacts and risks associated with the specific development or expansion and which are not already included in <u>Part B: section 1</u> . |
| Арре | endix 1 |         | Contains the method statements to be prepared prior to commencement of the activity. The method statements are <b>not required</b> to be submitted to the competent authority.  |

# 6. Completion of part B: section 1: the pre-approved generic EMPr template

The template is to be completed prior to commencement of the activity, by providing the following information for each environmental impact management action:

- For implementation
  - a 'responsible person',
  - a method for implementation,
  - a timeframe for implementation
- For monitoring
  - a responsible person
  - frequency
  - evidence of compliance.

The completed template must be signed and dated by the holder of the EA prior to commencement of the activity. The method statements prepared and agreed to by the holder of the EA must be appended to the template as <u>Appendix 1</u>. Each method statement must be signed and dated on each page by the holder of the EA. This template once signed and dated is legally binding. The holder of the EA will remain responsible for its implementation.

# 7. Amendments of the impact management outcomes and impact management actions

Once the activity has commenced, a holder of an EA may make amendments to the impact management outcomes and impact management actions in the following manner:

- Amendment of the impact management outcomes: in line with the process contemplated in Regulation 37 of the EIA Regulations; and
- Amendment of the impact management actions: in line with the process contemplated in Regulation 36 of the EIA Regulations.

## 8. Documents to be submitted as part of part B: section 2 site specific information and declaration

<u>Part B: Section 2</u> has three distinct sub-sections. The first and third sub-sections are in a template format. Sub-section two requires a map to be produced.

<u>Sub-section 1</u> contains the project name, the applicant's name and contact details, the site information, which includes coordinates of the property or farm in which the proposed substation infrastructure is proposed as well as the 21-digit Surveyor General code of each cadastral land parcel and, where available, the farm name.

<u>Sub-section 2</u> is to be prepared by an EAP and must contain his/her name and expertise including a curriculum vitae. This sub-section must include a map of the site sensitivity overlaid with the preliminary infrastructure layout using the national web based environmental screening tool, when available for compulsory use at: <a href="https://screening.environment.gov.za/screeningtool">https://screening.environment.gov.za/screeningtool</a>. The sensitivity map shall identify the nature of each sensitive feature e.g. threatened plant species, archaeological site, etc. Sensitivity maps shall identify features both within the planned working area and any known sensitive features and within 50 m from the development footprint.

<u>Sub-section 3</u> is the declaration that the applicant (s)/proponent (s) or holder of the EA in the case of a change of ownership must complete which confirms that the applicant/EA holder will comply with the pre-approved 'generic EMPr' template in <u>Section 1</u> and understands that the impact management outcomes and impact management actions are legally binding.

# (a) Amendments to Part B: Section 2 – site specific information and declaration

Should the EA be transferred, <u>Part B: Section 2</u> must be completed by the new applicant/proponent and submitted with the application for an amendment of the EA in terms of regulations 29 or 31 of the EIA Regulations, whichever applies. The information submitted as part of such an application for an amendment to an EA will be considered to be incomplete should a signed copy of <u>Part B: Section 2</u> not be submitted. Once approved, <u>Part B: Section 2</u> forms part of the EMPr for the development and the EMPr becomes legally binding to the new EA holder.

#### PART A – GENERAL INFORMATION

#### 1. **DEFINITIONS**

In this EMPr any word or expression to which a meaning has been assigned in the NEMA or EIA Regulations has that meaning, and unless the context requires otherwise –

"clearing" means the clearing and removal of vegetation, whether partially or in whole, including trees and shrubs, as specified;

"construction camp" is the area designated for key construction infrastructure and services, including but not limited to offices, overnight vehicle parking areas, stores, the workshop, stockpile and lay down areas, hazardous storage areas (including fuels), the batching plant (if one is located at the construction camp), designated access routes, equipment cleaning areas and the placement of staff accommodation, cooking and ablution facilities, waste and wastewater management;

"contractor" - The Contractor has overall responsibility for ensuring that all work, activities, and actions linked to the delivery of the contract, are in line with the Environmental Management Programme and that Method Statements are implemented as described.

"hazardous substance" is a substance governed by the Hazardous Substances Act, 1973 (Act No. 15 of 1973) as well as the Hazardous Chemical and Substances Regulations, 1995;

"method statement" means a written submission by the Contractor to the Project Manager in response to this EMPr or a request by the Project Manager and ECO. The method statement must set out the equipment, materials, labour and method(s) the Contractor proposes using to carry out an activity identified by the Project Manager when requesting the Method Statement. This must be done in such detail that the Project Manager and ECO is able to assess whether the Contractor's proposal is in accordance with this specification and/or will produce results in accordance with this specification;

The method statement must cover as a minimum applicable details with regard to:

- (i) Construction procedures;
- (ii) Plant, materials and equipment to be used;
- (iii) Transporting the equipment to and from site;
- (iv) How the plant/ material/ equipment will be moved while on site;
- (v) How and where the plant/ material/ equipment will be stored;
- (vi) The containment (or action to be taken if containment is not possible) of leaks or spills of any liquid or material that may occur;
- (vii) Timing and location of activities;
- (viii) Compliance/ non-compliance; and
- (ix) Any other information deemed necessary by the Project Manager.

"slope" means the inclination of a surface expressed as one unit of rise or fall for so many horizontal units;

"solid waste" means all solid waste, including construction debris, hazardous waste, excess cement/concrete, wrapping materials, timber, cans, drums, wire, nails, food and domestic waste (e.g. plastic packets and wrappers);

**"spoil"** means excavated material which is unsuitable for use as material in the construction works or is material which is surplus to the requirements of the construction works;

**"topsoil"** means a varying depth (up to 300 mm) of the soil profile irrespective of the fertility, appearance, structure, agricultural potential, fertility and composition of the soil;

"works" means the works to be executed in terms of the Contract

# 2. ACRONYMS and ABBREVIATIONS

| CA     | Competent Authority  |
|--------|--|
| cEO    | Contractors Environmental Officer  |
| dEO    | Developer Environmental Officer  |

| RI&APs | Registered Interested and affected parties                                     |

# 3. ROLES AND RESPONSIBILITIES FOR ENVIRONMENTAL MANAGEMENT PROGRAMME (EMPr) IMPLEMENTATION

The effective implementation of this generic EMPr is dependent on established and clear roles, responsibilities and reporting lines within an institutional framework. This section of the EMPr gives guidance to the various environmental roles and reporting lines, however, project specific requirements will ultimately determine the need for the appointment of specific person(s) to undertake specific roles and or responsibilities. As such, it must be noted that in the event that no specific person, for example, an environmental control officer (ECO) is appointed, the holder of the EA remains responsible for ensuring that the duties indicated in this document for action by the ECO are undertaken.

**Table 1:** Guide to roles and responsibilities for implementation of an EMPr

| Responsible Person(s)                | Role and Responsibilities   |
|--------------------------------------|---|
|                                      |   |
| Developer's Project Manager<br>(DPM) | Role The Project Developer is accountable for ensuring compliance with the EMPr and any conditions of approval from the competent authority (CA). Where required, an environmental control officer (ECO) must be contracted by the Project Developer to objectively monitor the implementation of the EMPr according to relevant environmental legislation, and the conditions of the environmental authorisation (EA). The Project Developer is further responsible for providing and giving mandate to enable the ECO to perform responsibilities, and he must ensure that the ECO is integrated as part of the project team while remaining independent. |
|                                      | <ul> <li>Responsibilities</li> <li>Be fully conversant with the conditions of the EA;</li> <li>Ensure that all stipulations within the EMPr are communicated and adhered to by the Developer and its Contractor(s);</li> <li>Issuing of site instructions to the Contractor for corrective actions required;</li> <li>Monitor the implementation of the EMPr throughout the project by means of site inspections and meetings. Overall management of the project and EMPr implementation; and</li> <li>Ensure that periodic environmental performance audits are undertaken on the project implementation.</li> </ul>                                       |

| Responsible Person(s)               | Role and Responsibilities  |
|-------------------------------------|--|
| Developer Site Supervisor (DSS)     | Role The DSS reports directly to the DPM, oversees site works, liaises with the contractor(s) and the ECO. The DSS is responsible for the day to day implementation of the EMPr and for ensuring the compliance of all contractors with the conditions and requirements stipulated in the EMPr.  |
|                                     | Responsibilities  - Ensure that all contractors identify a contractor's Environmental Officer (cEO);  - Must be fully conversant with the conditions of the EA. Oversees site works, liaison with Contractor, DPM and ECO;   |
|                                     | <ul> <li>Must ensure that all landowners have the relevant contact details of the site staff, ECO and cEO;</li> <li>Issuing of site instructions to the Contractor for corrective actions required;</li> <li>Will issue all non-compliances to contractors; and</li> <li>Ratify the Monthly Environmental Report.</li> </ul>   |
| Environmental Control Officer (ECO) | Role The ECO should have appropriate training and experience in the implementation of environmental management specifications. The primary role of the ECO is to act as an independent quality controller and monitoring agent regarding all environmental concerns and associated environmental impacts. In this respect, the ECO is to conduct periodic site inspections, attend regular site meetings, pre-empt problems and suggest mitigation and be available to advise on incidental issues that arise. The ECO is also required to conduct compliance audits, verifying the monitoring reports submitted by the cEO. The ECO provides feedback to the DSS and Project Manager regarding all environmental matters. The Contractor, cEO and dEO are answerable to the Environmental Control Officer for non-compliance with the Performance Specifications as set out in the EA and EMPr. |
|                                     | The ECO provides feedback to the DSS and Project Manager, who in turn reports back to the Contractor and potential and Registered Interested &Affected Parties (RI&APs), as required. Issues of non-compliance raised by the ECO must be taken up by the Project Manager, and resolved with the Contractor as per the conditions of his contract. Decisions regarding environmental procedures, specifications and requirements which have a cost implication (i.e. those that are deemed to be a variation, not allowed for in the  |

| Responsible Person(s) | Role and Responsibilities  |
|-----------------------|--|
|                       | Performance Specification) must be endorsed by the Project Manager. The ECO must also, as specified by the EA, report to the relevant CA as and when required.   |
|                       | Responsibilities  The responsibilities of the ECO will include the following:  - Be aware of the findings and conclusions of all EA related to the development;  - Be familiar with the recommendations and mitigation measures of this EMPr;  - Be conversant with relevant environmental legislation, policies and procedures, and ensure compliance with them;  - Undertake regular and comprehensive site inspections / audits of the construction site according to   |
|                       | <ul> <li>the generic EMPr and applicable licenses in order to monitor compliance as required;</li> <li>Educate the construction team about the management measures contained in the EMPr and environmental licenses;</li> <li>Compilation and administration of an environmental monitoring plan to ensure that the environmental management measures are implemented and are effective;</li> <li>Monitoring the performance of the Contractors and ensuring compliance with the EMPr and associated Method Statements;</li> </ul> |
|                       | <ul> <li>In consultation with the Developer Site Supervisor order the removal of person(s) and/or equipment which are in contravention of the specifications of the EMPr and/or environmental licenses;</li> <li>Liaison between the DPM, Contractors, authorities and other lead stakeholders on all environmental concerns;</li> </ul>   |
|                       | <ul> <li>Compile a regular environmental audit report highlighting any non-compliance issues as well as satisfactory or exceptional compliance with the EMPr;</li> <li>Validating the regular site inspection reports, which are to be prepared by the contractor Environmental Officer (cEO);</li> </ul>  |
|                       | <ul> <li>Checking the cEO's record of environmental incidents (spills, impacts, legal transgressions etc.) as well as corrective and preventive actions taken;</li> <li>Checking the cEO's public complaints register in which all complaints are recorded, as well as action taken;</li> </ul>  |

| Responsible Person(s)                    | Role and Responsibilities  |
|--|--|
|  | <ul> <li>Assisting in the resolution of conflicts;</li> <li>Facilitate training for all personnel on the site – this may range from carrying out the training, to reviewing the training programmes of the Contractor;</li> <li>In case of non-compliances, the ECO must first communicate this to the Senior Site Supervisor, who has the power to ensure this matter is addressed. Should no action or insufficient action be taken, the ECO may report this matter to the authorities as non-compliance;</li> <li>Maintenance, update and review of the EMPr;</li> <li>Communication of all modifications to the EMPr to the relevant stakeholders.</li> </ul>  |
| developer Environmental Officer<br>(dEO) | Role  The dEOs will report to the Project Manager and are responsible for implementation of the EMPr, environmental monitoring and reporting, providing environmental input to the Project Manager and Contractor's Manager, liaising with contractors and the landowners as well as a range of environmental coordination responsibilities.   |
|  | <ul> <li>Responsibilities</li> <li>Be fully conversant with the EMPr;</li> <li>Be familiar with the recommendations and mitigation measures of this EMPr, and implement these measures;</li> <li>Ensure that all stipulations within the EMPr are communicated and adhered to by the Employees, Contractor(s);</li> <li>Confine the development site to the demarcated area;</li> <li>Conduct environmental internal audits with regards to EMPr and authorisation compliance (on cEO);</li> <li>Assist the contractors in addressing environmental challenges on site;</li> <li>Assist in incident management:</li> <li>Reporting environmental incidents to developer and ensuring that corrective action is taken, and lessons learnt sharea;</li> <li>Assist the contractor in investigating environmental incidents and compile investigation reports;</li> <li>Follow-up on pre-warnings, defects, non-conformance reports;</li> <li>Measure and communicate environmental performance to the Contractor;</li> </ul> |

| Responsible Person(s)                  | Role and Responsibilities   |  |  |
|--|---|--|--|
|  | <ul> <li>Conduct environmental awareness training on site together with ECO and cEO;</li> <li>Ensure that the necessary legal permits and / or licenses are in place and up to date;</li> <li>Acting as Developer's Environmental Representative on site and work together with the ECO and contractor;</li> </ul>  |  |  |
| Contractor                             | Role  The Contractor appoints the cEO and has overall responsibility for ensuring that all work, activities, and actions linked to the delivery of the contract are in line with the EMPr and that Method Statements are implemented as described. External contractors must ensure compliance with this EMPr while performing the onsite activities as per their contract with the Project Developer. The contractors are required, where specified, to provide Method Statements setting out in detail how the impact management actions contained in the EMPr will be implemented during the development or expansion of substation infrastructure for the transmission and distribution of electricity activities.  |  |  |
|  | <ul> <li>Responsibilities</li> <li>project delivery and quality control for the development services as per appointment;</li> <li>employ a suitably qualified person to monitor and report to the Project Developer's appointed person on the daily activities on-site during the construction period;</li> <li>ensure that safe, environmentally acceptable working methods and practices are implemented and that equipment is properly operated and maintained, to facilitate proper access and enable any operation to be carried out safely;</li> <li>attend on site meeting(s) prior to the commencement of activities to confirm the procedure and designated activity zones;</li> <li>ensure that contractors' staff repair, at their own cost, any environmental damage as a result of a contravention of the specifications contained in EMPr, to the satisfaction of the ECO.</li> </ul> |  |  |
| contractor Environmental Officer (cEO) | Role  Each Contractor affected by the EMPr should appoint a cEO, who is responsible for the on-site implementation of the EMPr (or relevant sections of the EMPr). The Contractor's representative can be the site agent; site engineer; a dedicated environmental officer; or an independent consultant. The Contractor must ensure that the Contractor's Representative is suitably qualified to perform the necessary tasks and is   |  |  |

| Responsible Person(s) | Role and Responsibilities   |
|-----------------------|---|
|                       | appointed at a level such that she/he can interact effectively with other site Contractors, labourers, the Environmental Control Officer and the public. As a minimum the cEO shall meet the following criteria:  |
|                       | Responsibilities  - Be on site throughout the duration of the project and be dedicated to the project;  - Ensure all their staff are aware of the environmental requirements, conditions and constraints with respect to all of their activities on site;  - Implementing the environmental conditions, guidelines and requirements as stipulated within the EA, EMPr and Method Statements;  - Attend the Environmental Site Meeting;  - Undertaking corrective actions where non-compliances are registered within the stipulated timeframes;  - Report back formally on the completion of corrective actions;  - Assist the ECO in maintaining all the site documentation;  - Prepare the site inspection reports and corrective action reports for submission to the ECO;  - Assist the ECO with the preparing of the monthly report; and  - Where more than one Contractor is undertaking work on site, each company appointed as a Contractor will appoint a cEO representing that company. |

#### 4. ENVIRONMENTAL DOCUMENTATION REPORTING AND COMPLIANCE

To ensure accountable and demonstrated implementation of the EMPr, a number of reporting systems, documentation controls and compliance mechanisms must be in place for all substation infrastructure projects as a minimum requirement.

# 4.1 Document control/Filing system

The holder of the EA is solely responsible for the upkeep and management of the EMPr file. As a minimum, all documentation detailed below will be stored in the EMPr file. A hard copy of all documentation shall be filed, while an electronic copy may be kept where relevant. A duplicate file will be maintained in the office of the DSS (where applicable). This duplicate file must remain current and up-to-date. The filing system must be updated and relevant documents added as required. The EMPr file must be made available at all times on request by the CA or other relevant authorities. The EMPr file will form part of any environmental audits undertaken as prescribed in the EIA Regulations.

#### 4.2 Documentation to be available

At the outset of the project, the following preliminary list of documents shall be placed in the filing system and be accessible at all times:

- Full copy of the signed EA from the CA in terms of NEMA, granting approval for the development or expansion;
- Copy of the generic and site specific EMPr as well as any amendments thereof;
- Copy of declaration of implementing generic EMPr and subsequent approval of site specific EMPr and amendments thereof;
- All method statements;
- Completed environmental checklists;
- Minutes and attendance register of environmental site meetings;
- An up-to-date environmental incident log;
- A copy of all instructions or directives issued;
- A copy of all corrective actions signed off. The corrective actions must be filed in such a way that a clear reference is made to the non-compliance record;
- Complaints register.

#### 4.3 Weekly Environmental Checklist

The ECOs are required to complete a Weekly Environmental Checklist, the format of which is to be agreed prior to commencement of the activity. The ECOs are required to sign and date the checklist, retain a copy in the EMPr file and submit a copy of the completed checklist to the DSS on a weekly basis.

The checklists will form the basis for the Monthly Environmental Reports. Copies of all completed checklists will be attached as Annexures to the Environmental Audit Report as required in terms of the EIA Regulations.

## 4.4 Environmental site meetings

Minutes of the environmental site meetings shall be kept. The minutes must include an attendance register and will be attached to the Monthly Report that is distributed to attendees. Each set of minutes must clearly record "Matters for Attention" that will be reviewed at the next meeting.

# 4.5 Required Method Statements

The method statement will be done in such detail that the ECOs are enabled to assess whether the contractor's proposal is in accordance with the EMPr.

The method statement must cover applicable details with regard to:

- development procedures;
- materials and equipment to be used;
- getting the equipment to and from site;
- how the equipment/ material will be moved while on site;
- how and where material will be stored;
- the containment (or action to be taken if containment is not possible) of leaks or spills of any liquid or material that may occur;
- timing and location of activities;
- compliance/ non-compliance with the EMPr; and
- any other information deemed necessary by the ECOs.

Unless indicated otherwise by the Project Manager, the Contractor shall provide the following method statements to the Project Manager no less than 14 days prior to the commencement date of the activity:

- Site establishment Camps, Lay-down or storage areas, satellite camps, infrastructure;
- Batch plants;
- Workshop or plant servicing;
- Handling, transport and storage of Hazardous Chemical Substance's;
- Vegetation management Protected, clearing, aliens, felling;
- Access management Roads, gates, crossings etc.;
- Fire plan;
- Waste management transport, storage, segregation, classification, disposal (all waste streams);
- Social interaction complaints management, compensation claims, access to properties etc.;
- Water use (source, abstraction and disposal), access and all related information, crossings and mitigation;
- Emergency preparedness Spills, training, other environmental emergencies;
- Dust and noise management methodologies;
- Fauna interaction and risk management only if the risk was identified wildlife interaction especially on game farms; and
- Heritage and palaeontology management.

The ECOs shall monitor and ensure that the contractors perform in accordance with these method statements. Completed and agreed method statements between the holder of the EA and the contractor shall be captured in Appendix 1.

# 4.6 Environmental Incident Log (Diary)

The ECOs are required to maintain an up-to-date and current Environmental Incident Log (environmental diary). The Environmental Incident Log is a means to record all environmental incidents and/or all non-compliance notice would not be issued. An environmental incident is defined as:

- Any deviation from the listed impact management actions (listed in this EMPr) that
  may be addressed immediately by the ECOs. (For example, a contractor's staff
  member littering or a drip tray that has not been emptied);
- Any environmental impact resulting from an action or activity by a contractor in contravention of the environmental stipulations and guidelines listed in the EMPr which as a single event would have a minor impact but which if cumulative and continuous would have a significant effect (for example no toilet paper available in the ablutions for an afternoon); and
- General environmental information such as road kills or injured wildlife.

The ECOs are to record all environmental incidents in the Environmental Incident Log. All incidents regardless of severity must be reported to the Developer. The Log is to be kept in the EMPr file and at a minimum the following will be recorded for each environmental incident:

- The date and time of the incident;
- Description of the incident;
- The name of the Contractor responsible;
- The incident must be listed as significant or minor;
- If the incident is listed as significant, a non-compliance notice must be issued, and recorded in the log;
- Remedial or corrective action taken to mitigate the incident; and
- Record of repeat minor offences by the same contractor or staff member.

The Environmental Incident Log will be captured in the EAR.

# 4.7 Non-compliance

A non-compliance notice will be issued to the responsible contractor by the ECOs via the DSS or Project Manager. The non-compliance notice will be issued in writing; a copy filed in the EMPr file and will at a minimum include the following:

- Time and date of the non-compliance;
- Name of the contractor responsible;
- Nature and description of the non-compliance;
- Recommended / required corrective action; and
- Date by which the corrective action to be completed.
- The contractors shall act immediately when a notice of non-compliance is received and correct whatever is the cause for the issuing of the notice. Complaints received regarding activities on the development site pertaining to the environment shall be

recorded in a dedicated register and the response noted with the date and action taken. The ECO should be made aware of any complaints. Any non-compliance with the agreed procedures of the EMPr is a transgression of the various statutes and laws that define the manner by which the environment is managed. Failure to redress the cause shall be reported to the relevant CA for them to deal with the transgression, as it deems fit. The contractor is deemed not to have complied with the EMPr if, inter alia, There is a deviation from the environmental conditions, impact management outcomes and impact management actions activities, as approved in generic and site specific EMPr as relevant as set out in the EMPr, which deviation has, or may cause, an environmental impact.

#### 4.8 Corrective action records

For each non-compliance notice issued, a documented corrective action must be recorded. On receiving a non-compliance notice from the DSS, the contractor's cEO will ensure that the corrective actions required take place within the stipulated timeframe. On completion of the corrective action the cEO is to issue a Corrective Action Report in writing to the ECOs. If satisfied that the corrective action has been completed, the ECOs are to sign-off on the Corrective Action Report, and attach the report to the non-compliance notice in the EMPr file. A corrective action is considered complete once the report has signed off by the ECOs.

# 4.9 Photographic record

A digital photographic record will be kept. The photographic record will be used to show before, during and post rehabilitation evidence of the project as well used in cases of damages claims if they arise. Each image must be dated and a brief description note attached.

#### The Contractor shall:

1. Allow the ECOs access to take photographs of all areas, activities and actions.

The ECOs shall keep an electronic database of photographic records which will include:

- 1. Pictures of all areas designated as work areas, camp areas, development sites and storage areas taken before these areas are set up;
- 2. All bunding and fencing;
- 3. Road conditions and road verges;
- 4. Condition of all farm fences;
- 5. Topsoil storage areas;
- 6. All areas to be cordoned off during construction;
- 7. Waste management sites;
- 8. Ablution facilities (inside and out);
- 9. Any non-conformances deemed to be "significant";
- 10. All completed corrective actions for non-compliances;
- 11. All required signage;
- 12. Photographic recordings of incidents;
- 13. All areas before, during and post rehabilitation; and
- 14. Include relevant photographs in the Final Environmental Audit Report.

# 4.10 Complaints register

The ECOs shall keep a current and up-to-date complaints register. The complaints register is to be a record of all complaints received from communities, stakeholders and individuals. The Complaints Record shall:

- 1. Record the name and contact details of the complainant;
- 2. Record the time and date of the complaint;
- 3. Contain a detailed description of the complaint;
- 4. Where relevant and appropriate, contain photographic evidence of the complaint or damage (ECOs to take relevant photographs); and
- 5. Contain a copy of the ECOs written response to each complaint received and keep a record of any further correspondence with the complainant. The ECO's written response will include a description of any corrective action to be taken and must be signed by the Contractor, ECO and affected party. Where a damage claim is issued by the complainant, the ECOs shall respond as described in (section 4.11) below.

# 4.11 Claims for damages

In the event that a Claim for Damages is submitted by a community, landowner or individual, the ECOs shall:

- 1. Record the full detail of the complaint as described in (section 4.10) above;
- 2. The DPM will evaluate the claim and associated damage and submit the evaluation to the Senior Site Representative for approval;
- 3. Following consideration by the DPM, the claim is to be resolved and settled immediately, or the reason for not accepting the claim communicated in writing to the claimant. Should the claimant not accept this, the ECO shall, in writing report the incident to the Developer's negotiator and legal department; and
- 4. A formal record of the response by the ECOs to the claimant as well as the rectification of the method of making payments not amount will be recorded in the EMPr file.

# 4.12 Interactions with affected parties

Open, transparent and good relations with affected landowners, communities and regional staff are an essential aspect to the successful management and mitigation of environmental impacts.

### The ECOs shall:

- 1. Ensure that all queries, complaints and claims are dealt within an agreed timeframe;
- 2. Ensure that any or all agreements are documented, signed by all parties and a record of the agreement kept in the EMPr file;
- 3. Ensure that a complaints telephone numbers are made available to all landowners and affected parties; and
- 4. Ensure that contact with affected parties is courteous at all times;

#### 4.13 Environmental audits

Internal environmental audits of the activity and implementation of the EMPr must be undertaken. The findings and outcomes included in the EMPr file and submitted to the CA at intervals as indicated in the EA.

The ECOs must prepare a monthly EAR. The report will be tabled as the key point on the agenda of the Environmental Site Meeting. The Report is submitted for acceptance at the meeting and the final report will be circulated to the Project Manager and filed in the EMPr file. At a frequency determined by the EA, the ECOs shall submit the monthly reports to the CA. At a minimum the monthly report is to cover the following:

- \* Weekly Environmental Checklists;
- Deviations and non-compliances with the checklists;
- Non-compliances issued;
- Completed and reported corrective actions;
- \* Environmental Monitoring;
- \* General environmental findings and actions; and
- \* Minutes of the Bi-monthly Environmental Site Meetings.

#### 4.14 Final environmental audits

On final completion of the rehabilitation and/or requirements of the EA a final EAR is to be prepared and submitted to the CA. The EAR must comply with Appendix 7 of the EIA Regulations.

#### » PART B: SECTION 1: Pre-approved generic EMPr template

## 5. IMPACT MANAGEMENT OUTCOMES AND IMPACT MANAGEMENT ACTIONS

This section provides a pre-approved generic EMPr template with aspects that are common to the development of substation infrastructure for the transmission and distribution of electricity. There is a list of aspects identified for the development or expansion of substation infrastructure for the transmission and distribution of electricity, and for each aspect a set of prescribed impact management outcomes and associated impact management actions have been identified. Holders of EAs are responsible to ensure the implementation of these outcomes and actions for all projects as a minimum requirement, in order to mitigate the impact of such aspects identified for the development or expansion of substation infrastructure for the transmission and distribution of electricity.

The template provided below is to be completed by providing the information under each heading for each environmental impact management action.

The completed template must be signed and dated on each page by both the contractor and the holder of the EA prior to commencement of the activity. The method statements prepared and agreed to by the holder of the EA must be appended to the template as Appendix 1. Each method statement must also be duly signed and dated on each page by the contactor and the holder of the EA. This template, once signed and dated, is legally binding. The holder of the EA will remain responsible for its implementation.

# • 5.1 Environmental awareness training

Impact management outcome: All onsite staff are aware and understand the individual responsibilities in terms of this EMPr.

| Impact Management Actions   | Implementation                               |  |                                  | Monitoring         |  |   |

# 5.5 Fencing and Gate installation

**Impact management outcome:** Minimise impact to the environment and ensure safe and controlled access to the site through the erection of fencing and gates where required.

| <ul> <li>Existing crossing points must be favoured over the creation of new crossings (including temporary access).</li> </ul>  | DPM, cEO   | Develop a management plan or process for implementation should a spill take place within a watercourse and ensure continually monitoring | During the pre-<br>construction<br>and<br>construction<br>phase | ECO, dEO | During the construction phase of the project. | Existing crossing points utilised as opposed to new ones created and no incidents reported of spillage of pollutants into watercourses |
| <ul> <li>When working in or near any watercourse or estuary, the following environmental controls and consideration must be taken:</li> <li>a) Water levels during the period of construction.</li> <li>No altering of the bed, banks, course or characteristics of a watercourse;</li> <li>b) During the execution of the works, appropriate measures to prevent pollution and contamination of the riparian environment must be implemented e.g. including ensuring that construction equipment is well maintained;</li> <li>c) Where earthwork is being undertaken in close proximity to any watercourse, slopes must be stabilised using suitable materials, i.e., sandbags or geotextile fabric, to prevent sand and rock from entering the channel; and</li> <li>d) Appropriate rehabilitation and re-vegetation measures for the watercourse banks must be implemented timeously. In this regard, the banks should be appropriately and incrementally stabilised as soon as development allows.</li> </ul> | Contractor | Activities undertaken near watercourses must be in-line with and consider the specified environmental controls                           | During the construction phase                                   | ECO      | Monthly, and as and when required             | No degradation of the watercourses and no incidents of destruction reported  |

# 5.10 Vegetation clearing

**Impact management outcome:** Vegetation clearing is restricted to the authorised development footprint of the proposed infrastructure.

#### 7.1.3. Project Details

**Project Name**: The development of a collector substation complex for the  $100MW_{\alpha c}$  Lichtenburg 3 Photovoltaic Solar Energy Facility and Associated Infrastructure, near Lichtenburg North West Province.

#### 7.1.4. Project Description

The project will include the following infrastructure:

- » On-site inverters to convert power from Direct Current (DC) to Alternating Current (AC), and a 33/132kV on-site substation to facilitate the connection between the solar facility and the Eskom grid connection point at the Watershed Substation.
- » Cabling between the substation complex components to be laid underground where practical.
- » Auxiliary buildings such as a control room, office and workshop area for maintenance and storage.
- » Temporary laydown areas required during construction.
- » Internal access roads and perimeter security fencing around the footprint of the collector substation complex.

#### 7.1.5. Project Location

The Lichtenburg 3 PV Facility and the collector substation complex is proposed to be located on the Remaining Extent of Portion 02 of the Farm Zamenkomst No. 04.

#### 7.2. Sub-section 2: Development footprint site map

This sub-section must include a map of the site sensitivity overlaid with the preliminary infrastructure layout. The sensitivity map must be prepared from the national web based environmental screening tool, when available for compulsory use at: <a href="https://screening.environment.gov.za/screeningtool">https://screening.environment.gov.za/screeningtool</a>. The sensitivity map shall identify the nature of each sensitive feature e.g., threatened plant species, archaeological site, etc. Sensitivity maps shall identify features both within the planned working area and any known sensitive features within 50 m from the development footprint.

The national web-based environmental screening tool sensitivity maps was utilised for this project and the broader site within which the substation is location can be seen in Figures 2 to 9. The site-specific environmental sensitivity map included in the Project EMPr is included as Figure 1.

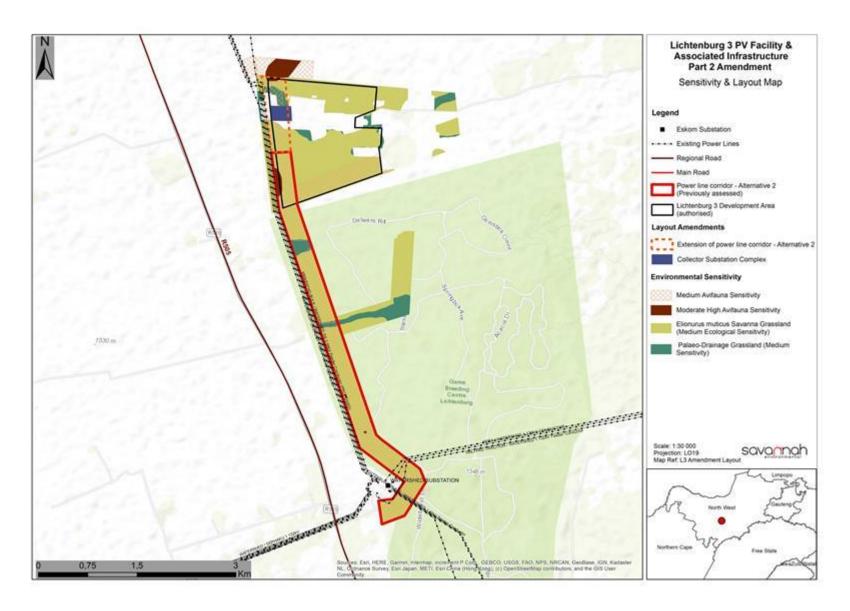

Figure 1: Environmental sensitivity map for the Lichtenburg 3 PV which also indicates the on-site collector substation

### 7.3 Sub-section 3: Declaration

The proponent/applicant or holder of the EA affirms that he/she will abide and comply with the prescribed impact management outcomes and impact management actions as stipulated in part B: section 1 of the generic EMPr and have the understanding that the impact management outcomes and impact management actions are legally binding. The proponent/applicant or holder of the EA affirms that he/she will provide written notice to the CA 14 days prior to the date on which the activity will commence of commencement of construction to facilitate compliance inspections.

| Robert Wagener                             | 08. August 2022   10:19 MESZ |  |
|--|------------------------------|--|
| Signature Proponent/Applicant/Holder of EA | Date                         |  |

This declaration will be signed by the proponent/applicant/holder of the EA once the contractor is appointed and has provided inputs to this Generic EMPr as per the requirements of this template.

### 7.4 Sub-section 4: amendments to site specific information (Part B; section 2)

Should the EA be transferred to a new holder, Part B: Section 2 must be completed by the new holder and submitted with the application for an amendment of the EA in terms of Regulations 29 or 31 of the EIA Regulations, whichever applies. The information submitted for an amendment to an environmental authorisation will be considered to be incomplete should a signed copy of Part B: Section 2 not be submitted. Once approved, Part B: Section 2 forms part of the EMPr for the development and the EMPr becomes legally binding to the new EA holder.

### » PART C

### 8. SITE SPECIFIC ENVIRONMENTAL ATTRIBUTES

If any specific environmental sensitivities/attributes are present on the site which require more specific impact management outcomes and actions, not included in the pre-approved generic EMPr template, to manage impacts, those impact management outcomes and impact management actions must be included in this section. These specific management controls must be referenced spatially, and must include impact management outcomes and impact management actions. The management controls, including impact management outcomes and impact management actions must be presented in the format of the preapproved generic EMPr template. This applies only to additional impact management outcomes and impact management actions that are necessary.

If <u>Part C</u> is applicable to the development as authorised in the EA, it is required to be submitted to the CA together with the BAR or EIAR, for consideration of, and decision on, the application for EA. The information in this section must be prepared by an EAP and the name and expertise of the EAP, including the curriculum vitae are to be included. Once approved, <u>Part C</u> forms part of the EMPr for the site and is legally binding.

This section will **not be required** should the site contain no specific environmental sensitivities or attributes.

# **» CONSTRUCTION PHASE OUTCOMES AND ACTIONS**

# Objective 1: Limit disturbance of vegetation and loss of protected flora during construction

Impacts on vegetation at the construction stage are expected to be mainly as a result of direct permanent loss of vegetation in development footprint areas. Due to disturbance of vegetation, there is a higher risk of alien species dominating disturbed areas. Therefore, control of alien invasive plants is required.

| Project component/s          | All infrastructure and activities which result in vegetation loss or clearing including:  » Clearing for roads and excavation for substation component foundations  » Underground cabling  » Access roads |
|------------------------------|---|
| Potential Impact             | » Loss of plant cover leading to erosion as well as loss of faunal habitat and loss of specimens of protected plants  |
| Activity/risk source         | Vegetation clearing for the following:  » Construction and service areas  » Access roads  » Laydown areas  » Construction Camps   |
| Mitigation: Target/Objective | <ul> <li>To reduce the footprint and low impact on terrestrial environment</li> <li>To reduce the impact on protected plant species</li> </ul>  |

| Mitigation: Action/Control  | Responsibility    | Timeframe                                   |
|---|-------------------|---|
| In order to minimise impacts on flora and ecological processes, the development footprint should be limited.                        | EO and Contractor | Site establishment and duration of contract |
| Land clearance must only be undertaken immediately prior to construction activities and unnecessary land clearance must be avoided. | Contractor        | Construction                                |
| The extent of clearing and disturbance to the natural vegetation must be kept to a minimum so that impact on flora is restricted.   | Contractor        | Site establishment and duration of contract |

| Mitigation: Action/Control  | Responsibility        | Timeframe                                   |
|---|-----------------------|---|
| Areas to be cleared must be clearly marked on-site to eliminate the potential for unnecessary clearing. No vegetation removal must be allowed outside the designated project development footprint. | consultation with the | Duration of Construction                    |
| Mitigation measures must be implemented to reduce the risk of erosion and the invasion of alien species.  | EO and Contractor     | Site establishment and duration of contract |
| No-Go areas are to be demarcated with tape and warning signs prohibiting access erected. Plant and vehicle operators must be instructed by the EO on where these No-Go sites are.                   | EO and Contractor     | Construction                                |
| All graded or disturbed areas which will not be covered by permanent infrastructure such as paving, buildings or roads must be stabilised with erosion control mats (geo-textiles) and revegetated. | Contractor            | Construction                                |
| Areas which include protected and red data species must be avoided at all costs during construction, unless the necessary permits are obtained.   | EO                    | Pre-construction; Site establishment        |

| Performance Indicator    | <ul> <li>Vegetation loss is restricted to infrastructure footprint</li> <li>Low impact on protected plant species</li> <li>All relevant biodiversity permits areobtained for the destruction or translocation of affected individuals of protected species.</li> </ul>                          |
|--------------------------|---|
| Monitoring and Reporting | <ul> <li>ECO to monitor construction to ensure that:</li> <li>Vegetation is cleared only within essential areas</li> <li>Erosion risk is maintained at an acceptable level through flow regulation structures where appropriate and the maintenance of plant cover wherever possible</li> </ul> |

### **OBJECTIVE 2: Protection of fauna**

Faunal species are indirectly affected by the overall loss of habitat as direct construction impacts can often limit the movement of individuals from the path of construction.

With respect to any threatened species, the loss of individuals or localised populations is unlikely to lead to a change in the conservation status of the species, unless they are classified as threatened. In the case of threatened animal species, the loss of a population or individual could lead to a direct change in its conservation status. This may arise if the proposed infrastructure is located where it will affect such individuals or populations or the habitat that they depend on. Consequences may include fragmentation of populations of affected species, reduction in area of occupancy of affected species, and loss of genetic variation within the affected species.

| Project Component/s          | <ul><li>» On-site collector substation</li><li>» Contractor's camp and laydown area.</li></ul>   |
|------------------------------|--|
| Potential Impact             | <ul> <li>Loss or displacement of fauna.</li> <li>Vegetation clearance and associated impacts on faunal habitats.</li> <li>Traffic to and from site.</li> </ul>   |
| Activity/Risk Source         | <ul> <li>Site preparation and earthworks.</li> <li>Construction-related traffic.</li> <li>Foundations or equipment installation.</li> <li>Mobile construction equipment.</li> <li>Underground cabling and road construction activities.</li> </ul> |
| Mitigation: Target/Objective | <ul> <li>To minimise footprints of habitat destruction</li> <li>To minimise disturbance to (and death of) resident and visitor faunal and avifaunal species</li> </ul>   |

| Mitigation: Action/Control   | Responsibility            | Timeframe                                   |
|--|---------------------------|---|
| The extent of clearing and disturbance to the natural vegetation must be kept to a minimum so that impact on fauna and their habitats is restricted. | Contractor                | Site establishment and duration of contract |
| Any fauna directly threatened by the construction activities must<br>be removed to a safe location by a suitably qualified person.                   | Suitably qualified person | Construction                                |

| Mitigation: Action/Control  | Responsibility | Timeframe                |
|---|----------------|--------------------------|
| The collection, hunting or harvesting of any plants or animals at<br>the site must be strictly forbidden. Personnel must not be allowed<br>to wander off of the demarcated construction site.   | Contractor     | Construction             |
| All construction vehicles must adhere to a low speed limit (30km/h) to avoid collisions with susceptible species such as snakes and tortoises.  | Contractor     | Construction Operation   |
| A firebreak must be maintained around the development boundary of the Collector Substation Complex to avoid potential fires occurring within the facility from spreading into the surrounding grasslands, subsequently posing a threat to faunal species occurring within the surrounding environment.  | Contractor     | Construction Operation   |
| All hazardous materials must be stored in the appropriate manner to prevent contamination of the site. Any accidental chemical, fuel and oil spills that occur at the site must be cleaned up in the appropriate manner as related to the nature of the spill.  | Contractor     | Construction Operation   |
| The intentional harming or killing of animals will be prohibited through on-site supervision and worksite rules.  | Contractor     | Construction Operation   |
| Implement a faunal removal plan/ rescue plan with designated/ trained personnel and contact numbers.  | Contractor     | Duration of contract     |
| <ul> <li>All cable trenches, excavations, etc., through sensitive areas should be excavated carefully in order to minimise damage to surrounding areas and biodiversity.</li> <li>The trenches must be checked on a daily basis for the presence of trapped animals.</li> <li>Any animals found must be removed by a suitably qualified person in a safe manner, unharmed, and placed in an area where the animal will be comfortable.</li> <li>All mammal, large reptiles and avifauna species found injured during construction must be taken to a suitably qualified veterinarian or rehabilitation centre to either be</li> </ul> | Contractor     | Duration of construction |

| Mitigation: Action/Control                                 | Responsibility | Timeframe |
|--|----------------|-----------|
| euthanized in a humane manner or cared for until it can be |                |           |
| released again.  |                |           |

| Performance | » No disturbance outside of designated work areas                                    |
|-------------|--|
| Indicator   | » Minimised clearing of existing/natural vegetation and habitats for fauna           |
|             | » Limited impacts on faunal species (i.e. noted/recorded fatalities)                 |
| Monitoring  | » Observation of vegetation clearing activities by EO throughout construction phase. |
|             | » Supervision of all clearing and earthworks.  |
|             | » Recording faunal fatalities to monitor success of relocation efforts.              |
|             | » An incident reporting system will be used to record non-conformances to the EMPr.  |

### OBJECTIVE 3: Protection of fossils and sites of heritage and archaeological value

The project site has been disturbed and transformed by agricultural activities which has led to the presence of pre-existing agricultural plough fields, grazing areas and farm buildings. Furthermore, throughout the agricultural areas within the project site, several heaps of rocks that have been removed from the agricultural fields were identified. No archaeological resources, graves<sup>1</sup> or burial grounds were identified within the project site. In addition, no structures of heritage importance were recorded.

Considering the palaeontology of the project site, it was identified that the area in question is located within the Malmani Group which contains a number of stromatolitic dolomites. These were formed in warm shallow sea and are the accumulation of layer upon layer of minerals deposited by blue-green algae (also known as cyanobacteria) and rarely some filamentous algae. Minerals deposited by the algae include calcium carbonate, calcium sulphate and magnesium carbonate. Very rarely are the algal cells preserved in the stromatolites and these are microscopic. Stromatolites are essentially trace fossils and these ones are 2650 to 2750 million years old and very abundant. Based on the nature of the proposed development, construction activities may impact on fossil heritage should these features be preserved within the development footprint. The geological structures of the project site suggest that the rocks are much too old to contain fossils other than blue-green algae. Taking account of the defined criteria, the potential impact to fossil heritage resources is negligible to extremely low.

| Project Component/s          | » Collector Substation Complex  |
|------------------------------|---|
| Potential Impact             | » Heritage objects or artefacts found on site are inappropriately managed or destroyed.   |
| Activity/Risk Source         | <ul> <li>» Site preparation and earthworks</li> <li>» Foundations or plant equipment installation</li> <li>» Mobile construction equipment movement on site</li> <li>» Power line construction activities.</li> </ul> |
| Mitigation: Target/Objective | » To ensure that any heritage objects found on site are treated appropriately and in accordance with the relevant legislation   |

| Mitigation: Action/control   | Responsibility                                      | Timeframe   |
|--|---|---|
| Areas required to be cleared during construction must be clearly marked in the field to avoid unnecessary disturbance of adjacent areas.   | Contractor in consultation with Heritage Specialist | Pre-construction                                      |
| A chance find procedure must be developed and implemented in the event that archaeological or palaeontological resources are found. In the case where the proposed development activities bring these materials to the surface, work must cease and SAHRA must be contacted immediately. | Contractor<br>ECO<br>Heritage specialist            | Pre-construction Construction                         |
| Contractors must be informed before construction starts on the possible types of heritage sites and cultural material they may encounter and the procedures to follow if they find sites. All staff should also be familiarised with procedures for dealing with heritage objects/sites. | Contractor, ESA and heritage specialist             | Duration of contract, particularly during excavations |
| Familiarise all staff and contractors with procedures for dealing with heritage objects/sites.   | Heritage Specialist                                 | Pre-construction                                      |
| Project employees and any contract staff must maintain, at all times, a high level of awareness of the possibility of discovering heritage sites.  | Contractor  | Duration of contract                                  |
| In the event that fossils resources are discovered during excavations, immediately stop excavation in the vicinity of the potential material. Mark (flag) the position and also spoil that   | Contractor and EO                                   | Construction  |

| Mitigation: Action/control  | Responsibility                            | Timeframe    |
|---|---|--------------|
| may contain fossils. Inform the site foreman and the EO. EO to inform the developer, the developer contacts the standby archaeologist and/or palaeontologist. EO to describe the occurrence and provide images by email.  |   |              |
| If any evidence of archaeological sites or remains (e.g. remnants of stone-make structures, indigenous ceramics, bones, stone artefacts, ostrich eggshell fragments, charcoal and ash concentrations), fossils or other categories of heritage resources are found during the proposed development, SAHRA APM Unit (Natasha Higgitt/Phillip Hine 021 462 540) must be alerted. If unmarked human burials are uncovered, the SAHRA Burial Grounds and Graves (BGG) Unit (Thingahangwi Tshivhase/Mimi Seetelo 012 320 8490), must be alerted immediately as per section 35(3) and 36(6) of the NHRA. A professional archaeologist or paleontologist, depending on the nature of the finds, must be contracted as soon as possible to inspect the findings. If the newly discovered heritage resources prove to be of archaeological or paleontological significance, a Phase 2 rescue operation may be required subject to permits issued by SAHRA. | Contractor and ECO Heritage Specialist    | Construction |
| If concentrations of archeological heritage material and human remains are uncovered during construction, all work must cease immediately and be reported to the South African Heritage Resources Agency (SAHRA) (021 642 4502) so that systematic and professional investigations / excavation can be undertaken.  | Contractor and ECO<br>Heritage Specialist | Construction |

| Performance | » No disturbance outside of designated work areas  |
|-------------|--|
| Indicator   | » All heritage items located are dealt with as per the legislative guidelines                                    |
| Monitoring  | » Observation of excavation activities by the EO throughout construction phase                                   |
|             | » Supervision of all clearing and earthworks   |
|             | » Due care taken during earthworks and disturbance of land by all staff and any heritage objects found reported. |

- » Appropriate permits obtained from SAHRA prior to the disturbance or destruction of heritage sites (if required).
- » An incident reporting system will be used to record non-conformances to the EMPr.

# **» OPERATIONAL PHASE OUTCOMES AND ACTIONS**

### OBJECTIVE 1: Limit the ecological footprint of the Collector substation

Indirect impacts on vegetation and terrestrial fauna during operation could result from maintenance activities and the movement of people and vehicles on site. In order to ensure the long-term environmental integrity of the site following construction, maintenance of the areas rehabilitated post-construction must be undertaken until these areas have successfully re-established.

| Project component/s          | <ul> <li>Areas requiring regular maintenance</li> <li>Route of the security team</li> <li>Areas disturbed during the construction phase and subsequently rehabilitated at its completion</li> </ul>  |
|------------------------------|--|
| Potential Impact             | <ul> <li>» Disturbance to or loss of vegetation and/or habitat</li> <li>» Alien plant invasion</li> <li>» Environmental integrity of site undermined resulting in reduced visual aesthetics, erosion, compromised land capability and the requirement for on-going management intervention.</li> </ul> |
| Activity/Risk Source         | » Movement of employee vehicles within and around site.  |
| Mitigation: Target/Objective | <ul> <li>Maintain minimised footprints of disturbance of vegetation/habitats on-site.</li> <li>Ensure and encourage plant regrowth in non-operational areas of post-construction rehabilitation.</li> </ul>  |

| Mitigation: Action/Control   | Responsibility   | Timeframe |
|--|------------------|-----------|
| Vehicle movements must be restricted to designated roadways.   | Holder of the EA | Operation |
| Existing roads must be maintained to ensure limited erosion and impact on areas adjacent to roadways.  | Holder of the EA | Operation |
| Vegetation control within the facility should be by manual clearing and herbicides should not be used except to control alien plants in the prescribed manner. | Holder of the EA | Operation |

| An on-going alien plant monitoring and eradication programme must be        | Holder of the EA | Operation                              |
|---|------------------|--|
| implemented, where necessary.   |                  |  |
| Annual site inspection for erosion or water flow regulation problems – with | Holder of the EA | Annual monitoring until successful re- |
| follow up remedial action where problems are identified.                    |                  | establishment of vegetation in an area |

| Performance Indicator | <ul> <li>No further disturbance to vegetation or terrestrial faunal habitats</li> <li>No erosion problems within the Collector Substation Complex footprint</li> <li>Low abundance of alien plants within the affected area</li> <li>Maintenance of a ground cover of perennial grasses and forbs that resist erosion</li> <li>Continued improvement of rehabilitation efforts</li> </ul>  |
|-----------------------|--|
| Monitoring            | <ul> <li>Observation of vegetation on-site by the Environmental Manager.</li> <li>Regular inspections to monitor plant regrowth/performance of rehabilitation efforts and weed infestation compared to natural/undisturbed areas</li> <li>Annual monitoring with records of alien species presence and clearing actions</li> <li>Annual monitoring with records of erosion problems and mitigation actions taken with photographs</li> </ul> |

## **OBJECTIVE 2: Minimisation of visual impact**

The primary visual impact, namely the appearance and dimensions of the Collector Substation Complex are not possible to mitigate to any significant extent within this landscape. The functional design of the structures and the dimensions of the substation cannot be changed in order to reduce visual impacts. The potential for mitigation is therefore low or non-existent. The mitigation of secondary visual impacts, such as security and functional lighting, construction activities, etc. may be possible and should be implemented and maintained on an on-going basis. The operational, security and safety lighting fixtures of the proposed solar energy facility.

| Project component/s          | Collector Substation Complex   |   |
|------------------------------|--|---|
| Potential Impact             | Enhanced visual intrusion  |   |
| Activity/risk source         | Substation and associated lighting   |   |
| Mitigation: Target/Objective | To minimise potential for visual impact  |   |
|                              | The containment of light emitted from the substation in order to eliminate the risk of additional night-time visual impact | S |

| Mitigation: Action/control   | Responsibility   | Timeframe                 |
|--|------------------|---------------------------|
| Maintain the general appearance of the Collector Substation Complex in | Holder of the EA | Operation and maintenance |
| an aesthetically pleasing way.   |                  |                           |
| Undertake regular maintenance of light fixtures.                       | Holder of the EA | Operation and maintenance |

| Performance Indicator    | » Appropriate visibility of infrastructure to aircraft   |  |
|--------------------------|--|--|
|                          | » The effective containment of the light to the Collector Substation Complex site                                    |  |
| Monitoring and Reporting | » The monitoring of the condition and functioning of the light fixtures during the operational phase of the project. |  |

# **APPENDIX 1: METHOD STATEMENTS** To be prepared by the contractor prior to commencement of the activity. The method statements are **not required** to be submitted to the CA.

### **CURRICULUM VITAE OF JO-ANNE THOMAS**

Profession: Environmental Management and Compliance Consultant; Environmental Assessment

Practitioner

Specialisation: Environmental Management; Strategic environmental advice; Environmental compliance

advice & monitoring; Environmental Impact Assessments; Policy, strategy & guideline

formulation; Project Management; General Ecology

Work experience: Twenty four (24) years in the environmental field

### **VOCATIONAL EXPERIENCE**

Provide technical input for projects in the environmental management field, specialising in Strategic Environmental Advice, Environmental Impact Assessment studies, environmental auditing and monitoring, environmental permitting, public participation, Environmental Management Plans and Programmes, environmental policy, strategy and guideline formulation, and integrated environmental management. Key focus on integration of the specialist environmental studies and findings into larger engineering-based projects, strategic assessment, and providing practical and achievable environmental management solutions and mitigation measures. Responsibilities for environmental studies include project management (including client and authority liaison and management of specialist teams); review and manipulation of data; identification and assessment of potential negative environmental impacts and benefits; review of specialist studies; and the identification of mitigation measures. Compilation of the reports for environmental studies is in accordance with all relevant environmental legislation.

Undertaking of numerous environmental management studies has resulted in a good working knowledge of environmental legislation and policy requirements. Recent projects have been undertaken for both the public- and private-sector, including compliance advice and monitoring, electricity generation and transmission projects, various types of linear developments (such as National Road, local roads and power lines), waste management projects (landfills), mining rights and permits, policy, strategy and guideline development, as well as general environmental planning, development and management.

### **SKILLS BASE AND CORE COMPETENCIES**

- Project management for a range of projects
- Identification and assessment of potential negative environmental impacts and benefits through the review and manipulation of data and specialist studies
- Identification of practical and achievable mitigation and management measures and the development of appropriate management plans
- · Compilation of environmental reports in accordance with relevant environmental legislative requirements
- External and peer review of environmental reports & compliance advice and monitoring
- Formulation of environmental policies, strategies and guidelines
- Strategic and regional assessments; pre-feasibility & site selection
- Public participation processes for a variety of projects
- Strategic environmental advice to a wide variety of clients both in the public and private sectors
- Working knowledge of environmental planning processes, policies, regulatory frameworks and legislation

### **EDUCATION AND PROFESSIONAL STATUS**

### Degrees:

- B.Sc Earth Sciences, University of the Witwatersrand, Johannesburg (1993)
- B.Sc Honours in Botany, University of the Witwatersrand, Johannesburg (1994)
- M.Sc in Botany, University of the Witwatersrand, Johannesburg (1996)

### **Short Courses:**

- Environmental Impact Assessment, Potchefstroom University (1998)
- Environmental Law, Morgan University (2001)
- Environmental Legislation, IMBEWU (2017)
- Mining Legislation, Cameron Cross & Associates (2013)
- Environmental and Social Risk Management (ESRM), International Finance Corporation (2018)

### **Professional Society Affiliations:**

- Registered EAP with the Environmental Assessment Practitioners Association of South Africa (EAPASA) (2019/726)
- Registered with the South African Council for Natural Scientific Professions as a Professional Natural Scientist: Environmental Scientist (400024/00)
- Registered with the International Associated for Impact Assessment South Africa (IAIAsa): 5601
- Member of the South African Wind Energy Association (SAWEA)

### **EMPLOYMENT**

| Date                    | Company                          | Roles and Responsibilities                       |  |

|                         |                                  | advisor.   |  |
| 1997 – 2005:            | Bohlweki Environmental (Pty) Ltd | Senior Environmental Scientist at. Environmental |  |
|                         |                                  | Management and Project Management                |  |
| January – July 1997:    | Sutherland High School, Pretoria | Junior Science Teacher                           |  |

### **PROJECT EXPERIENCE**

Project experience includes large infrastructure projects, including electricity generation and transmission, wastewater treatment facilities, mining and prospecting activities, property development, and national roads, as well as strategy and guidelines development.

### RENEWABLE POWER GENERATION PROJECTS: PHOTOVOLTAIC SOLAR ENERGY FACILITIES

### **CURRICULUM VITAE OF NKHENSANI MASONDO**

**Profession:** Senior Environmental Consultant

**Specialisation:** Environmental Management, Environmental Impact Assessments, Report Writing, Project

Management, Stakeholder Engagement, Environmental Auditing

Work Experience: 6 years in the Environmental Management Consulting Field

### **VOCATIONAL EXPERIENCE**

Nkhensani is an EAPASA Registered Environmental Assessment Practitioner with over 6 years of experience in the environmental field. She holds a BSocSCi (Hons) in Environmental Management and Analysis and a BA (Own Choice) specialising in Geography and Archaeology, both from the University of Pretoria (UP). She is currently pursuing her MSc in Environmental Management at the University of South Africa (UNISA).

She has been involved in residential, commercial, institutional, industrial, and mixed-use development within South Africa. She has been involved in mine closure strategies and implementation plans on behalf of Mining partners. Her main responsibilities include compilation of environmental reports, stakeholder engagement, and project management.

### **SKILLS BASE AND CORE COMPETENCIES**

- Environmental Planning
- Compilation of Environmental Impact Assessments, Basic Assessments, Water Use Licenses, NEMA Queries,
   GPEMF Applications, General Authorisations, Schedule 1 and Existing Lawful Use Applications
- Compilation and Implementation of Environmental Programmes
- Undertaking Environmental Audits for residential, commercial, and industrial developments
- Project Management of various projects
- Review of Specialists reports
- Undertaking Stakeholder Engagements for a variety of projects

### **EDUCATION AND PROFESSIONAL STATUS**

### Degrees:

- Master of Science in Environmental Management (current), University of South Africa
- BSocSci (Hons) Environmental Analysis and Management (2014), University of Pretoria
- BA (Own Choice) Specialising in Geography and Archaeology (2013), University of Pretoria

### **Short Courses:**

- Geographical Information Systems Training (ESRI) 2016
- ISO 14001: 2004 Lead Environmental Auditor Training: Environmental Management Systems (SGS) 2015

### **Professional Society Affiliations:**

• Environmental Assessment Practitioners Association of South Africa – Environmental Assessment Practitioner
