Dear «Title» «Surname»

**PROPOSED SUBMARINE TELECOMMUNICATIONS CABLE SYSTEM (T3 SUBMARINE CABLE SYSTEM)
TO BE LANDED AT AMANZIMTOTI, KWAZULU-NATAL SOUTH AFRICA**

**BACKGROUND INFORMATION AND INVITATION TO PARTICIPATE IN AN ENVIRONMENTAL
AUTHORISATION PROCESS (ENVIRONMENTAL IMPACT ASSESSMENT)**

Alcatel Submarine Networks (ASN) has been contracted to supply and install the proposed T3 submarine cable system connecting South Africa to Mauritius with branching units to Madagascar and Reunion. The South African landing is proposed to be at Amanzimtoti, KwaZulu-Natal on the East Coast of South Africa and is to be operated by Liquid Telecom as the South African Landing Partner. Liquid Telecom aims to secure local permits to land the T3 submarine cable system at Amanzimtoti and ACER (Africa) Environmental Consultants (ACER) has been appointed as the independent Environmental Impact Assessment Practitioner (EAP) to apply for the required environmental authorisation and associated permits, inclusive of public participation.

Project Need and Desirability

Submarine telecommunications cables are important for international telecommunications networks, transporting almost 100% of transoceanic Internet traffic throughout the world (www.iscpc.org). This is significant because it is widely recognised that access to affordable international bandwidth is key to economic development in every country.

Currently, Africa relies primarily on satellites to provide its international communications. Communication via submarine telecommunications cables generally allows for lower cost, better performance and greater capacity (throughput) than that available via satellite. Improvement in Africa's information technology infrastructure via telecommunications cables is expected to remove one of the current key inhibitors to development in Africa and support economic growth and opportunities on the continent.

With the landing of the T3 submarine cable system, businesses and consumers in South Africa and Mauritius will benefit from enhanced capacity and reliability for services such as telecommuting, HD TV broadcasting, Internet services, video conferencing, advanced multimedia and mobile video applications.

Broadband traffic is growing exponentially due to new applications like cloud computing and on-demand video. Furthermore, the demand for new connectivity reflects an end-user and business environment in which ultra-broadband access is essential for sustainable growth and development.

Environmental Legislation

The current Environmental Impact Assessment Regulations, 2014 (as amended 2017) published under Section 24(5) read with Sections 24, 24D and 44 of the National Environmental Management Act, 1998 (Act No. 107 of 1998) (as amended) apply to this project.

Based on these regulations, the EAP must complete Scoping and an Impact Assessment within 300 days of acceptance of the Application for Authorisation by the competent authority, viz. the national Department of Environment, Forestry and Fisheries (DEFF). DEFF is the competent authority because the T3 submarine cable system traverses' international boundaries. In addition, apart from operating licenses which are the responsibility of Liquid Telecom, the following licenses/permits may be required:

- ☐ Beach Driving Permit from DEFF (Oceans and Coasts) to allow vehicles to drive on the beach.
- ☐ Lease agreement from the Department of Public Works for construction of infrastructure in the coastal public property (the acquisition of the lease agreement is the responsibility of Liquid Telecom).
- ☐ Sea Shore Lease Permit from the provincial Department of Economic Development, Tourism and Environmental Affairs for construction of the marine components of the cable.
- ☐ Heritage Permit (offshore and onshore heritage resources) from the South African Heritage Resources Agency and provincial agency (Amafa), respectively, for mitigation of impacts or destruction relating to heritage resources.
- ☐ Water Use License from the Department of Human Settlements, Water and Sanitation to undertake specified water uses.
- ☐ Protected Plant Permits from Ezemvelo KZN Wildlife to remove/destroy protected plants.
- ☐ Protected Tree Permits from the provincial office of DEFF (Forestry Section: Forestry Regulations and Support) to transplant/remove/destroy protected trees and trees in indigenous forests.
- ☐ A Section 53 License from the Department of Mineral Resources to undertake a different land-use on the seafloor (other than prospecting or mining) (relevant to oil and gas concessions). The acquisition of this license is the responsibility of Liquid Telecom.
- ☐ Final Letter of Permission from eThekweni Municipality (Parks, Leisure and Cemeteries - Beach Management Section) to implement the landing (once all other approvals are in place).

The purpose of this letter is to invite you, as a potentially Interested & Affected Party to participate in the Environmental Impact Assessment. A Background Information Document (Appendix 1) and Comment Sheet (Separate Attachment) have been compiled and are provided herewith to facilitate your participation (these documents are also available at www.acerafrica.co.za under the "Current Projects" link (T3 - Amanzimtoti)). Please note that the closing date for initial comments¹ during public announcement is **10 May 2021**.

¹ Please note that consistent with GNR 326, 42(a), 44 (1) and 19(1)(a) (7 April 2017), all comments received will be captured in a Comments and Responses Report which will be made available to the competent authority and which will be placed in the public domain as part of the public review process of the EIA reports.

Please contact the Public Participation Office to obtain further information:
