**Re: Confirmation of support for permission to analyze a sample from Kruger Cave.**

The Wits Archaeological Collection currently houses excavated material from Kruger Cave. We support Justin Bradfield's application to sample 10 mg of a 200 mg residue sample collected by Mason from inside a femur quiver, for the purposes of chemical analyses. The accession number of the jar containing the contents to be sampled is: 35/83/1439.

Yours sincerely,

A handwritten signature in black ink, appearing to read 'Thembi Russell', written in a cursive style.
