1. IMPORTANT NOTICE

In terms of the Mineral and Petroleum Resources Development Act (Act 28 of 2002 as amended) (MPRDA), the Minister must grant a prospecting or mining right if among others the mining “will not result in unacceptable pollution, ecological degradation or damage to the environment”.

Unless an Environmental Authorisation (EA) can be granted following the evaluation of an Environmental Impact Assessment and an Environmental Management Programme report in terms of the National Environmental Management Act (Act 107 of 1998) (NEMA), it cannot be concluded that the said activities will not result in unacceptable pollution, ecological degradation or damage to the environment.

In terms of Section 16(3)(b) of the EIA Regulations, 2014, any report submitted as part of an application must be prepared in a format that may be determined by the Competent Authority and in terms of Section 17 (1) (c) the competent Authority must check whether the application has taken into account any minimum requirements applicable or instructions or guidance provided by the competent authority to the submission of applications.

It is therefore an instruction that the prescribed reports required in respect of applications for an EA for listed activities triggered by an application for a right or a permit are submitted in the exact format of, and provide all the information required in terms of, this template. Furthermore please be advised that failure to submit the information required in the format provided in this template will be regarded as a failure to meet the requirements of the Regulation and will lead to the EA being refused.

It is furthermore an instruction that the Environmental Assessment Practitioner must process and interpret his/her research and analysis and use the findings thereof to compile the information required herein. (Unprocessed supporting information may be attached as appendices). The EAP must ensure that the information required is placed correctly in the relevant sections of the Report, in the order, and under the provided headings as set out below, and ensure that the report is not cluttered with un-interpreted information and that it unambiguously represents the interpretation of the applicant.

2. OBJECTIVE OF THE BASIC ASSESSMENT PROCESS

The objective of the basic assessment process is to, through a consultative process—

- (a) determine the policy and legislative context within which the proposed activity is located and how the activity complies with and responds to the policy and legislative context;
- (b) identify the alternatives considered, including the activity, location, and technology alternatives;
- (c) describe the need and desirability of the proposed alternatives,
- (d) through the undertaking of an impact and risk assessment process inclusive of cumulative impacts which focused on determining the geographical, physical, biological, social, economic, heritage , and cultural sensitivity of the sites and locations within sites and the risk of impact of the proposed activity and technology alternatives on the these aspects to determine;
 - (i) the nature, significance, consequence, extent, duration, and probability of the impacts occurring to; and

- (ii) the degree to which these impacts—
 - (aa) can be reversed;
 - (bb) may cause irreplaceable loss of resources; and
 - (cc) can be managed, avoided or mitigated;
- (e) through a ranking of the site sensitivities and possible impacts the activity and technology alternatives will impose on the sites and location identified through the life of the activity to—
 - i. identify and motivate a preferred site, activity and technology alternative;
 - ii. identify suitable measures to manage, avoid or mitigate identified impacts; and
 - iii. identify residual risks that need to be managed and monitored.

PART A

SCOPE OF ASSESSMENT AND BASIC ASSESSMENT REPORT

3. Contact Person and correspondence address

a) Details of

i) Details of the EAP

The following are the details of the Environmental Assessment Practitioner responsible for the Zastrocode environmental authorisation application for the proposed prospecting of iron ore and manganese within Tsantsabane Local Municipality, Northern Cape Province:

Name of The Practitioner: Ms. Babalwa Fatyi

Tel No.: +27 12 998 7642

Fax No. : +27 12 998 7642

e-mail address: babalwa@myezo.co.za

ii) Expertise of the EAP

(1) The qualifications of the EAP

(with evidence).

Ms. Babalwa Fatyi is a SACNASP registered Professional Scientist (1993) and a holder of a Master of Science (cum laude) from the Witwatersrand University. She is a registered Environmental Assessment Practitioner (EAP) and an accredited Environmental Auditor with the Institute of Environmental Management and Assessment, Lincoln, UK (0025153). She has several certificates in environmental management including ISO 14001 and Waste Management and Auditing. For copy of qualifications, please refer to Appendix 1.1-1.

(2) Summary of the EAP's past experience.

(In carrying out the Environmental Impact Assessment)

Ms. Babalwa Fatyi's mining environmental impact assessment and management experience is extensive both in the private and government sectors including working with the Council for Scientific and Industrial Research (CSIR) and the Department of Minerals and Energy (DME) (now Department of Mineral Resources and Energy (DMRE)) to develop best practice rehabilitation guidelines for derelict, abandoned and operational mines. Some of Babalwa's vast mining environmental consulting experience include working for SRK Consulting from 1999 to 2002. From 2002 to 2005 she worked for a mining company Trans Hex (Pty) Ltd where she successfully administered the company's compliance with both internal and legislative environmental obligations, and was active in stimulating environmental consciousness through all the different mining development phases. Driven to impart environmental stewardship at personal, societal and corporate levels, her consulting experience gave her an insight with respect to sector-specific environmental requirements ranging from authorizations, implementation and monitoring. A proud and recognised South African female business owner and entrepreneur, she continues to be a voice

of consciousness and a team player for change with regards to how development and environmental matters are handled.

She has a way of teasing environmental and social commitments into manageable components and elements. This also stems from her capability to enable understanding risks, legal framework, biophysical and social risks, and monitoring to ensure that co-operative agreements are established for each development she is supporting, thus creating opportunities for transformation and innovative change.

Focusing on the environmental aspects, she developed a sustainability report for the Wesizwe Platinum. Working with a task team from the Department of Environmental Affairs (now Department of Forestry, Fisheries and Environmental (DFFE)) she played a key role in the fruitful development of the fourth National Country Report in the implementation of the United Nation Convention to Combat Desertification.

Babalwa has resourcefully led, project-managed and participated in over 40 mining environmental impact assessment studies (EIAs) and Environmental Management Plans programmes (EMPrs) including compiling more than 20 Basic Assessment Reports (BARs) within the various sectors and industries. She was also part of industry experts who were selected to partake in the executive preparation programme, a collaboration between Mining Qualification Authority and academia. Cumulatively, she has developed over 50 strategic/management programmes, closure plans, sustainability reports and monitoring protocols for the mining industry. A hardworking researcher, she is an established co-author of several publications in scientific journals since 1999. On her own, she has written and published poetry books and performed poetry presentations, both which promote sustainable means of unlocking the natural resource capital whilst upholding coexistence principles.

Through various roles and innovations, she is well versed with sea mining activities, marine legislation and coastal environmental management. As a Trans Hex operations representative in the provincial coastal committee, from 2003 to 2011 she assisted in tackling impacts related to industrial activities along the coast. The major aim was to promote protection and sustainable utilisation of coastal resources. As part of this committee, she assisted in the spearheading of the integration of coastal management principles and objectives into the plans, programs and policies of other organ of state with jurisdiction over aspects of the coastal environment. Guided by marine legislation, she was involved in the implementation of sea concession EMPs for shallow and deep water operations. She developed the monitoring protocol for the deep sea operations and reviewed the monthly monitoring sheets that the contractors were trained to fill during the sea mining activities. She also represented a company on The Benguela Current Large Marine Ecosystem (BCLME) programme.

She has diverse sector experience and insight with sector specific environmental requirements ranging from EA applications; implementation and monitoring, acquired while working for the mining industry and later while serving the same mining industry as a consultant. Babalwa is fluent in partnering with both large blue-chip companies and smaller companies, which require her expertise ensuring collaborative design of strategies and methodologies. Subsequently, this kindles sustainable development and enable successful execution of various projects which she directs and participates in. The tenacity and authenticity of a project leader determines its success and Babalwa has personified these traits in the way she applies her experience in dealing with stakeholders, adapting to change, dealing with unexpected parameters and having competence in budget and cost control.

b) Location of the overall Activity

The following details summarise the location of the proposed project and activities

Farm Name:	Thorns 407; Duine 437; Record 411; Loskop 414; Oatlands 406; and Towton 415.	
Application area (Ha)	20 061,27	
Magisterial district:	Kuruman District of Northern Cape Province.	
Distance and direction from nearest town	50 km North West of Kathu town	
21 digit Surveyor General Code for each farm portion	Thorns 407	C04100000000040700000
	Duine 437	C04100000000043700000
	Record 411	C04100000000041100000
	Loskop 414	C04100000000041400000
	Oatlands 406	C04100000000040600000
	Towton 415	C04100000000041500000

c) Locality map

(show nearest town, scale not smaller than 1:250000)

The proposed site falls under Postmasburg town stretching about 110 km to 140 km to the north west of the town. Tswalu Nature Reserve is located about 23 kilometers north west the site, Kathu about 55 km on the south east, Hotazel at about 60 km north east, of is also located about 150 km north east of Upington town, about 100 km west of Kuruman, Beeshoek at approximately 105 km to the sout east, Griquatown located about 170 km to the to the south east, Kuruman about 270 to the south east. In addition, Kimberly is located about 280 km south east of the project area. A project locality map is shown on Figure c1-1. A Regional Map is attached as as Figure c1-2.

d) Description of the scope of the proposed overall activity

Attach a plan drawn to a scale acceptable to the competent authority but not less than 1: 10 000 that shows the location, and area (hectares) of all the aforesaid main and listed activities, and infrastructure to be placed on site

An infrastructure layout plan and camp location map are attached as Appendix d1-1 and Appendix d1-2 respectively.

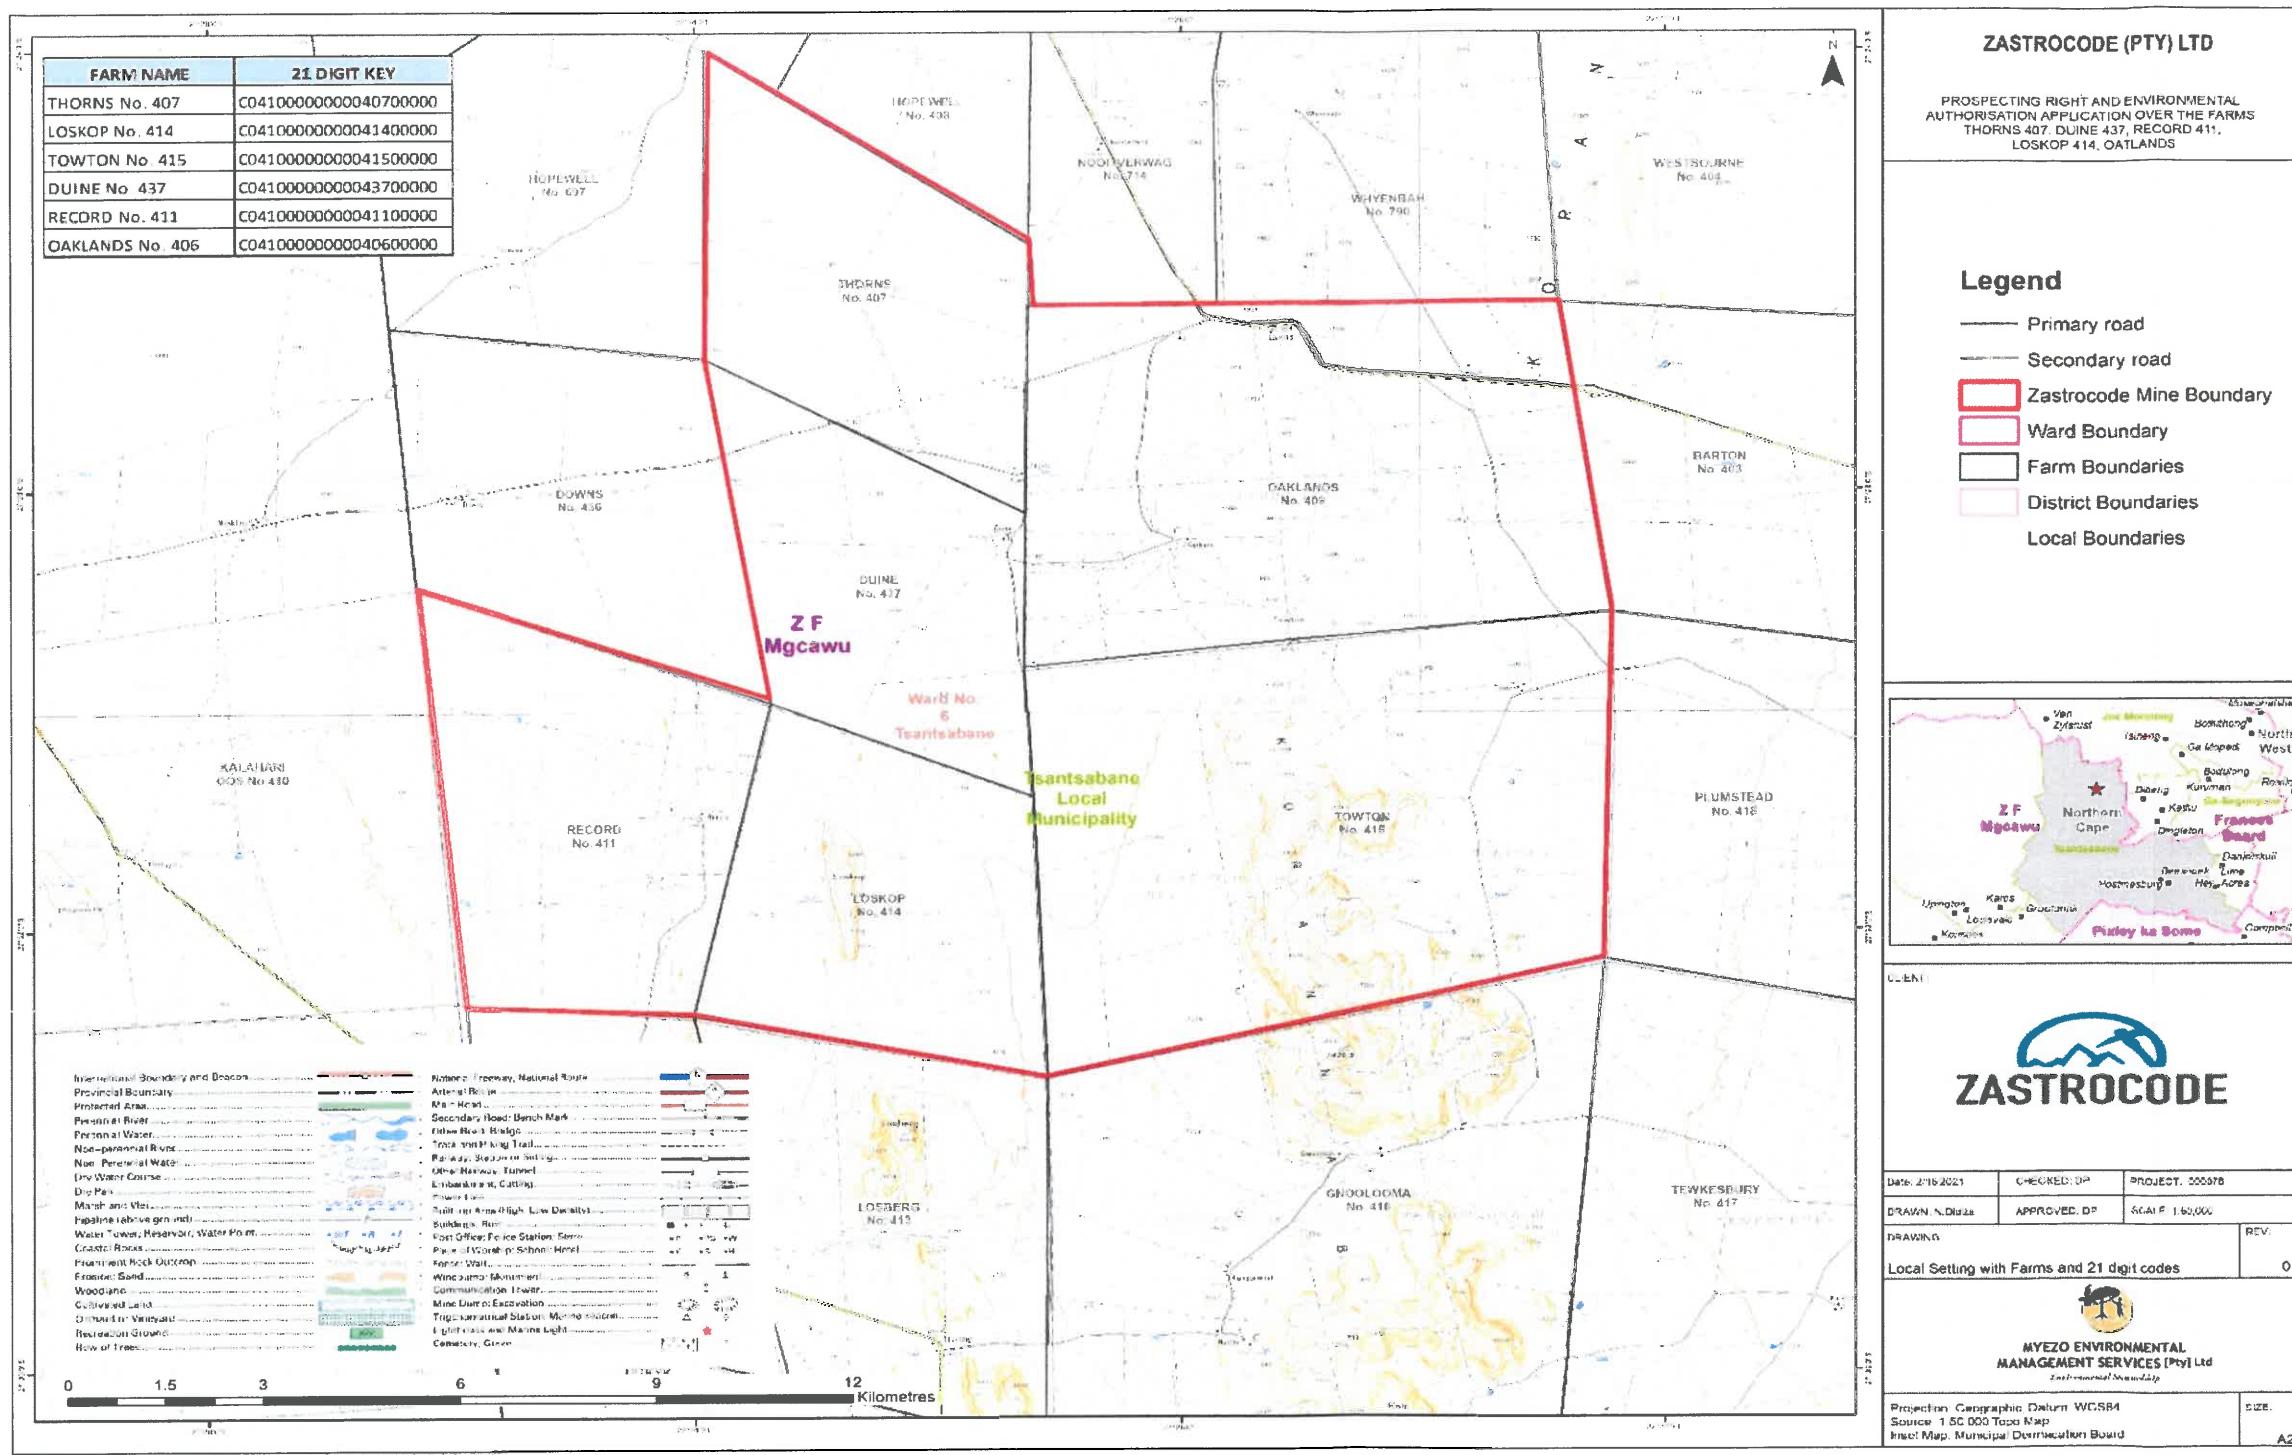

Figure c1-1: Project Locality map

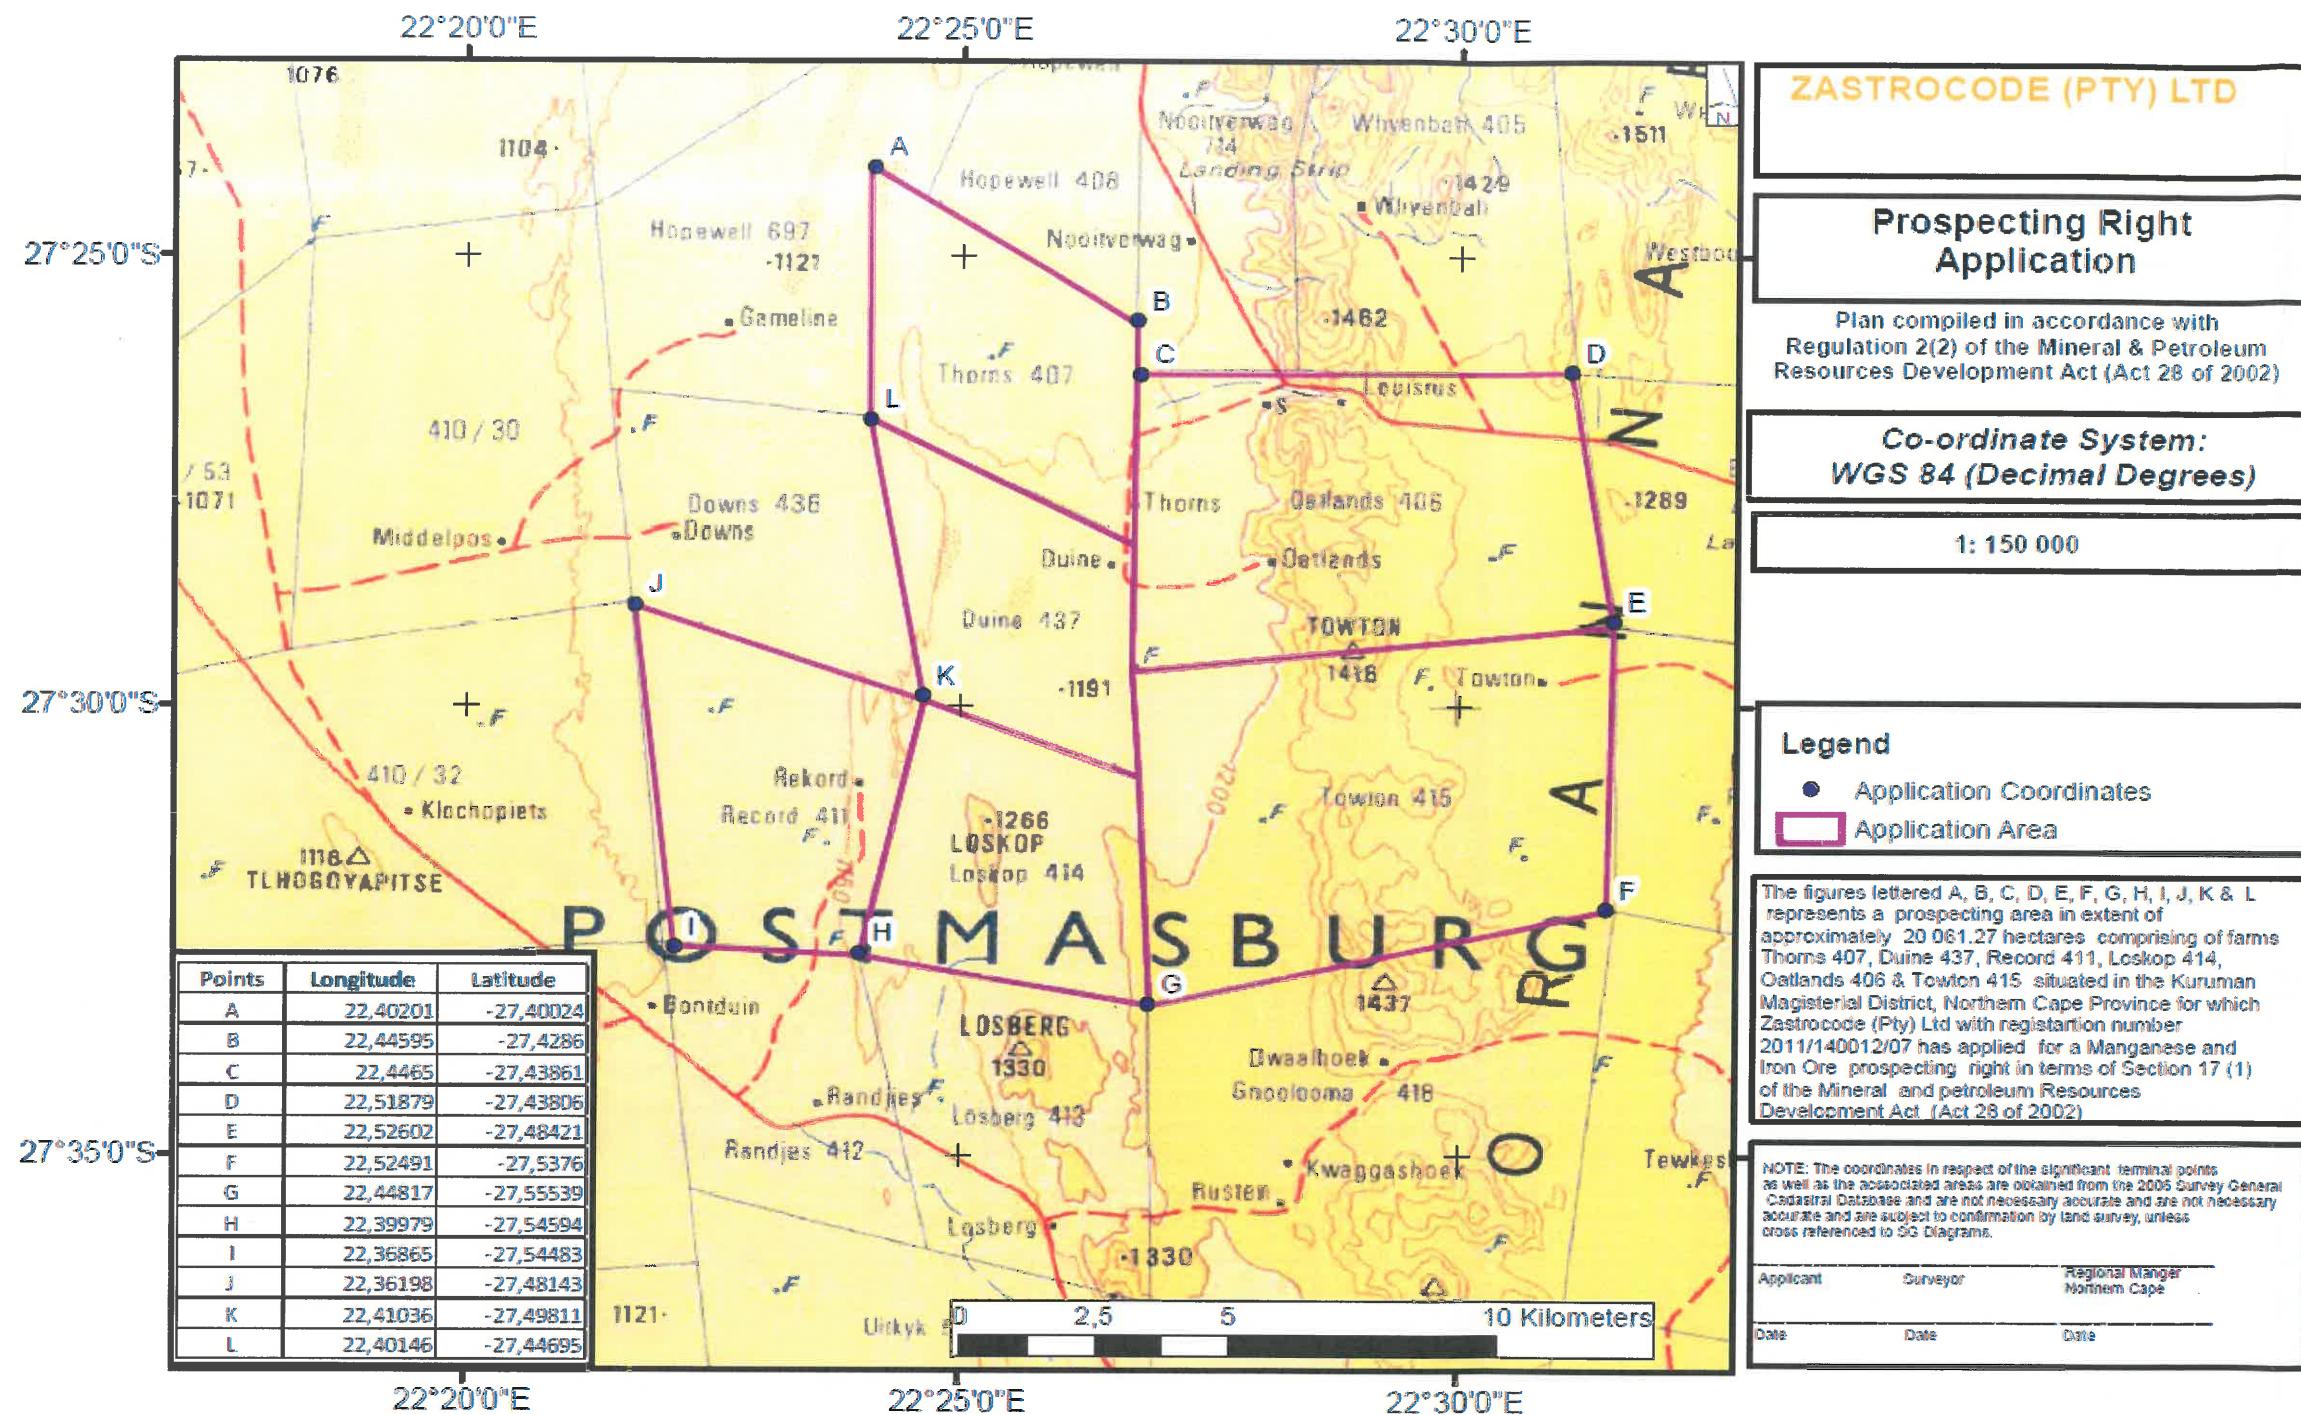

Figure c1-2: Regional Map

(ii) Description of the activities to be undertaken

(Describe Methodology or technology to be employed, including the type of commodity to be prospected/mined and for a linear activity, a description of the route of the activity).

Prospecting activities will include non-invasive techniques and invasive (drilling) techniques to be done in two phases. Geological surface mapping will be done to evaluate the potential of the ore deposit within the prospecting area. This will entail surface geological mapping, structural mapping and subsurface interpretations of the structural trends.

Mapping will be performed in conjunction with geophysical surveys, which entails ground magnetics and ground gravity geophysical procedures on a pre-determined grid of 100 m x 100 m, in order to delineate ore formations. Minimal vegetation clearance will be required during the geophysical surveys to provide freedom of movement to the geo-technicians that are traversing the grids.

In-situ ore material across the area will also be analysed to determine the subsurface ore grade variation throughout the prospecting area. The samples will be selected based on the availability of fresh subsurface ore material.

For the drilling programme, a total of 40 drill holes are planned to depths ranging from 50 m to 100 m. The locations of these holes will be based on results obtained from the geological interpretations during the non-invasive phase. Prospecting activities will make use of existing roads and track as far as possible. However, additional tracks estimated at 5 km in length as well as 40 drill-pads will be created

Ultimately, all prospecting data will be validated and captured in order to generate geological models and resource estimates.

Non-Invasive activities:

These are project activities which do not disturb or alter anything in the terrestrial environment. Project activities that are noninvasive include Desktop Study and Pre-feasibility Studies.

- **Desktop Study**

These activities will include:

- i) Data gathering
 - ii) Remote Sensing
 - iii) Geological Mapping
 - iv) Geochemistry
- i. Data Gathering - Detailed geological and structural mapping will also be carried out. Information concerning the project area and applicable spheres of interest will be sought from reliable and reputable sources such as government publications and academic institutions. This will include geological data, environmental baseline information and the socio-economic status. The information will be used not only for mining and environmental applications but for effective decision making. This will involve analysis of data where exploration records of all previous work in the area will be re-examined, and the following studies will be carried out:
 - Literature review
 - Detailed aerial photograph and satellite image interpretation
 - Regional airborne geophysics with main emphasis on magnetic

- Historical drilling review and interpretation
- ii. Remote sensing this involves acquiring information from the project area making use of aerial photographs, satellite imagery, and regional airborne geophysical data.
 - Information from satellite such as the Landsat Thematic Mapper Satellite can detect geological faults and fractures that indicate manganese and iron ore deposits.
 - Existing aerial photography – this information can help photogeologists in determining important information such as lithologies and other geological features.
 - Satellite imagery – satellite imagery helps gather important information such as soil type, water content and drainage without having to disturb the land. The information is important for geological assessments, environmental management and decision-making.
 - Regional airborne geophysical data- this is information describing the region's electromagnetic properties, magnetic field and resistivity (USGS, 2020). Resistivity can help determine the soil's mineral properties due to its conductivity relative to water content.
- iii. Geological mapping – this is field data collection whereby the geologist will record surface features such as outcrops and rock types. Geological mapping will also be applied to identify the manganese and iron ore bearing geological units with their local complexities and variations.
- iv. Geochemistry – reviews of historical drilling will be done. This is analysis of existing data for the chemical composition of the earth's crust in the project area.

These noninvasive activities will be undertaken during the period that the prospecting permit application is being assessed and, presumably, approved. A period of 12 months is estimated for this.

• Pre-feasibility studies

- The will be the final stage of the prospecting programme and would involve the following activities:
- Initial conceptual Mine Planning.
- Planning the infrastructure requirements
- Environmental management planning
- Financial modelling
- Market analysis
- Analysis of transport logistics to markets
- Assessment of personal and training requirements
- Assessment of socio-economic factors

Invasive activities:

These are project activities that result in the disturbance of the land and this will involve drilling activities and resource generation. Activities to be undertaken include:

1. Initial Drilling

These activities will be undertaken after the issuance of a licence, identified prospective targets will require further subsurface investigation. Thus, drilling will be undertaken and about 10 drill-holes will be drilled initially. Drill holes could vary in depth from 50 to 100m, with an average depth in the order of 50 meters since from the available data for the area the manganese/iron outcrops. The total amount of drilling to be budgeted for at this stage will be 1000 meters and it is assumed that every

meter of the manganese and iron intersections will be analysed. Types of drilling being considered include Diamond, Air Core, Rotary Air Blast (RAB) or Reverse circulation (RC). Drill waste includes non-hazardous muds and fluids. Drilling of the prospective areas will commence to establish presence of mineralization. Geological borehole logging, down the hole logging and sampling will also be carried out this may involve the use of special drills to get cylindrical core samples for continuous data and geological mapping of iron and manganese ore seams.

The geological information generated will be used to model and estimate resource. The resources will at least be expected to be in the Measured and Indicated Category according to the appropriate reporting standard (SAMREC, JORC, or NI43 -101).

2. Resource Drilling

Depending on the results of the initial drilling, further 30 drill-holes totaling about 2000 meters may be required. The activities will include:

- Resource drilling
- Geological Modelling
- Resource Calculation

3. Prefeasibility Studies

These activities are non-invasive and will include the following:

- Geological modeling and resources evaluation
- Mine planning
- Plant design
- Financial modeling
- Market analysis

e) Policy and Legislative Context

This section provides the legal basis for undertaking developments that affect the environment during the prospecting programmes. This section as such is a key requirement to ensure environmental protection and upholding of the principles of stewardship during design, planning and implementation of any developmental project. It is important that the persons with environmental management responsibility have easy access to the legal requirements to guarantee compliance.

Legal references can be used as source materials to provide text of regulatory or statutory language or provide interpretation of statutes or regulations. Such references are necessary to determine compliance requirements. Without adequate statutory and regulatory references, the parties who would be involved in the mining project would not know which statutes are applicable to the activities and how to comply with the legal requirements.

It is thus important that the legal register be continuously updated:

- To have a conceptual and documented understanding of legal environmental conditions;
- To have a legal basis for undertaking developments that affect the environment;
- To ensure that all the persons with environmental management responsibility have easy access to the legal requirements; and
- To stay updated about current statutory requirements for the sectors in which the division operates

From time to time the legislation changes and new Acts, Regulations and or Guidelines are added. This section does not deal with all environmental statutes, but rather focuses on those that have compliance implications for the mining project.

The Constitution provides the foundation for environmental regulation and policy. Section 24 of the Constitution makes provision for environmental protection for the benefit of present and future generations and the right to an environment that is not harmful to health and well-being. This can only be achieved through a reasonable legislative framework and other measures that prevent pollution and ecological degradation, promote conservation, secure ecologically sustainable development and the sustainable use of natural resources. The responsibility of ensuring a safe and healthy environment rests upon the State, reference can be made to the provisions of Section 7(2) of the Constitution that reads “The State must respect, protect and fulfil the bill of rights”. South Africa, specifically, the mandated DFFE, fulfils these rights through the application of the NEMA and Specific Environmental Management Acts, among other tools.

NEMA provides an overarching framework for the majority of issues relating to environmental management in South Africa. This framework includes the following key pieces of inter-related legislation:

- The National Environmental Management: Biodiversity Act (No. 10 of 2004) (NEM:BA)
- The National Environmental Management: Protected Areas Act (No. 57 of 2003) (NEM:BA)
- The National Environmental Management: Air Quality Act (No. 39 of 2004) (NEM:AQA)
- The National Environmental Management: Waste Act (No. 59 of 2008) (NEM:WA)

The NEMA seeks to meet the Constitutional right to an environment that is not harmful to the health and well-being of South African citizens, the equitable distribution of natural resources, sustainable development, environmental protection and the formulation of environmental management frameworks (EMFs).

NEMA's primary objective is to provide for co-operative governance by establishing principles for decision making on matters affecting the environment, institutions that will promote co-operative governance and procedures for coordinating environmental functions exercised by organs of state and to provide for matters connected therewith. Further to the above, the NEMA introduced a number of guiding principles into environmental legislation such as the life-cycle approach to waste management, producer responsibility, the precautionary principle, and the polluter pays principle, as well as 'duty of care' which places the onus on any person who causes significant pollution/degradation to the environment to institute measures to prevent pollution from occurring and to minimise and rectify the pollution or degradation where unavoidable. An additional principle, contained within the NEMA, is that of "Sustainable Development" which states that waste generation is to be avoided, or where it cannot be altogether avoided, minimised and re-used or recycled where possible and otherwise disposed of in a responsible manner (the "Waste Hierarchy").

The NEMA introduced a number of guiding principles into the South African environmental legislation, including the life-cycle approach to waste management, producer responsibility, the precautionary principle and the polluter pays principle. NEMA also places a duty of care on any person who causes significant pollution or degradation to the environment, requiring them to institute measures to prevent pollution from occurring, or to minimise and rectify the pollution or degradation to the environment, requiring them to institute measures to prevent pollution from occurring, or to minimise and rectify the pollution or degradation where it cannot reasonably be avoided.

The NEMA enables the Minister to identify activities which may not commence without prior authorisation from the Minister or Member of Executive Council (MEC) and may also identify geographical areas in which specified activities may not commence without prior authorisation. The Minister thus published GNR 983, 984 and 985 (2014) which indicates listed activities that may not

commence prior to receipt of authorisation. Should the intended activity trigger a listed activity, the prospector will need to undertake one of the following three processes:

- GNR 983 listed activity trigger – undertake a Basic Assessment (BA) process;
- GNR 984 listed activity trigger – undertake a Scoping and Environmental impact Reporting (S&EiR) process; and
- GNR 985 listed activity trigger – undertake a BA process.

The development of the norms and standards is the foundation of the regulatory system established in terms of Section 7(1) (c) of the NEM: WA.

Chapter 4 of the National Water Act (No. 36 of 1998) (NWA) as amended (Sections 21 to 55) focuses on water use. Generally, a water use must be licensed. Water uses that need to be licensed (Section 21) include:

- Taking of water from a water resource
- Storing of water;
- Impeding or diverting the flow in a watercourse;
- Engaging in a stream flow reduction activity contemplated in Section 36;
- Controlled activities (includes irrigation with wastewater and intentional recharging of aquifers with wastewater);
- Discharging of waste in a manner which may detrimentally impact on a water resource,
- Disposing of waste in a manner which may detrimentally impact on a water resource disposal of wastewater from industrial processes;
- Removing and/ or discharging of underground water if it is necessary for the efficient continuation of an activity or for the safety of people Licenses are not required (Section 22) where:
- Altering the bed, banks, course or characteristics of a watercourse;
- The water use is an existing lawful use (a use which was authorised before the commencement of the Act) if:
- The use is permissible under a general authorisation (GA) this will be a measure to avoid a flood of licence applications and will be revoked with time)
- The water use is listed in Schedule 1 (includes: domestic use, non-commercial gardening and emergency water use such as fire-fighting);

A responsible authority has waived the need for a licence (because it is satisfied that the purpose of the Act will be served by an authorisation under any other law).

In water stressed areas, the responsible authority may override the provision for unlicensed use (Section 43).

Licensing procedures are outlined in Sections 40 to 48 and the review of licences is covered in Sections 49 to 52. Licences can only be granted once a preliminary estimation of the Reserve (water required for basic human and ecological needs) has taken place.

Pollution of water

Section 19 of the NWA states that any person who owns, controls, occupies or uses land is deemed responsible for taking measures to prevent pollution of water resources. If these measures are not taken, the responsible authority may do whatever is necessary to prevent the pollution or remedy its effects and to recover all reasonable costs from the responsible person.

Non-compliance with these provisions constitutes a criminal offence.

The compliance requirement would extend to by-laws. Compliance with the environmental provisions of these by-laws and strategic development plans would be the responsibility of the implementing agencies.

Notwithstanding the above, South Africa is signatory to various international treaties and conventions which have been translated into various pieces of legislation to enable country's compliance with the international agenda and affairs.

Relevant international statutes are indicated on Table e1-1 and relevant national statutes are presented on Table e1-2.

Table e1-1: Relevant International Statutes

International treaties	Some Applicable Sections
Ramsar Convention, 1971	Convention on Wetlands, called the Ramsar Convention, is an intergovernmental treaty that provides the framework for national action and international cooperation for the conservation and wise use of wetlands and their resources. The audit was in so far as it pertained to management of wetlands
United Nations Framework Convention on Climate Change, 1994	The ultimate objective of the Convention is to stabilize greenhouse gas concentrations "at a level that would prevent dangerous anthropogenic (human induced) interference with the climate system." The climate change plans must be incorporated into the environmental planning tools.
United Nations Convention to Combat Desertification, 1994	Convention to combat desertification and mitigate the effects of drought through national action programs that incorporate long-term strategies supported by international cooperation and partnership arrangements. Desertification can be caused by deforestation, soil erosion, creation of dongas and unsustainable practices. As such rehabilitation and avoidance of activities that can induce desertification is a best practice approach.
United Nations Convention on Biological Diversity, 1992	The objectives are the conservation of biological diversity, the sustainable use of its components and the fair and equitable sharing of the benefits arising out of the utilization of genetic resources, including by appropriate access to genetic resources and by appropriate transfer of relevant technologies, taking into account all rights over those resources and to technologies, and by appropriate funding. Biodiversity management strategies and plans should be part of the mining project implementation process.

REGULATION OR GUIDELINES	RELEVANT AUTHORITY	REQUIREMENTS /IMPLICATIONS FOR THE EXPLORATION PROJECT	FUTURE PROCESSES/INTERVENTIONS REQUIRED	REFERENCE WHERE APPLIED
Environmental & Natural Resources Management				
Constitution of the Republic of South Africa, Act (No 108 of 1996)	Department of Justice and Constitutional Development	The Constitution Africa lay down that efficient, economic and effective use of resources must be promoted and a high standard of professional ethics must be promoted and maintained. Chapter 2 of the Constitution includes a number of fundamental rights, Section 24 lays out the citizens' environmental rights.	No licence requirement, but general respect for the environment and people's rights to a healthy and clean environment during planning, operation and closure of the mine.	Section e) and j) of the BAR Section 1(d) (i); e) and f) of the EMPr
NEMA	DFFE	Ensures the consideration of environmental attributes in project management and decision-making which may have a significant effect on the environment and its resources. It also ensures satisfactory and appropriate opportunity for public participation in decisions that may affect the environment or their lives.	There is an opportunity for the environmental attributes of a proposed project to be considered during the planning stages. Public participation and consultation ensures that their voice is heard in decisions and they provide information vital to the project. Such information may be impossible to find or guess without their participation.	Section h) of the BAR

REGULATION OR GUIDELINES	RELEVANT AUTHORITY /IMPLEMENTATIONS FOR THE EXPLORATION PROJECT)	FUTURE PROCESSES/INTERVENTIONS REQUIRED	REFERENCE WHERE APPLIED
Sections 24 and 28	<p>Environmental protection and mitigation against negative impacts the development or rehabilitation might present defines strategic environmental management goals and objectives of government in relation to activities that may significantly affect the environment.</p> <p>The establishment of supporting regulations and delineation of listed activities for which an EA is required prior to their commencement, promotes the application of environmental assessment and management tools to ensure application of integrated environmental management principles. The Act aims to improve the quality of environmental decision-making by setting out principles for environmental management that apply to all government departments and to all organisations that may affect the environment.</p> <p>The developer has a general duty of care for the environment and to institute such measures</p>	<p>An EA required for triggered activities. Activities such as Land clearance for the development of the PV Solar Panels and Battery storage. "The clearance of an area of 1 hectare or more, but less than 20 hectares of indigenous vegetation."</p>	Section h) of the BAR

REGULATION OR GUIDELINES	RELEVANT AUTHORITY	REQUIREMENTS /IMPLICATIONS FOR THE EXPLORATION PROJECT)	FUTURE PROCESSES/INTERVENTIONS REQUIRED	REFERENCE WHERE APPLIED
NEMA Chapter 7, Section 28		It stresses on the duty-of-care principle emphasizing that project proponents must put in place measures to avoid environmental degradation or where avoidance is not possible, to take reasonable steps to mitigate and restore the initial environmental status or better.	Suggested mitigation measures must adequately remediate the environment. Avoidance mechanisms must be suggested prior to project commencement. Planning must prioritize options that have minimal environmental damage or those with damages or negative impacts that can be managed and reversed.	Section j); k) and l) of the BAR Section 1(d) (i); e) and f) of the EMPR

REGULATION OR GUIDELINES	RELEVANT AUTHORITY	REQUIREMENTS /IMPLICATIONS FOR THE EXPLORATION PROJECT	FUTURE PROCESSES/INTERVENTIONS REQUIRED	REFERENCE WHERE APPLIED
GNR 324 Listing Notice 3 (7 April 2017)		mitigate detrimental impacts on the environment, and to optimise positive environmental impacts, and for matters pertaining thereto.		
National Environmental Management: EIA Regulations of 2014 Chapter 4, Sections 19 and 25		Development projects with potential for negative impacts must put in place an Environmental Management Programme and provisions for Compliance Auditing. Activities such as public/stakeholder consultations and participation must be carried out.	An Environmental Management Plan has been developed and issues that will be noted during the public consultation exercise will be used and considered during the development of the final EMPr.	Section 1(d) (i); h); k) and l) of the EMPr
NEM: WA			To reform the law regulating waste management in order to protect health and environment by providing reasonable measures for the prevention of pollution, ecological degradation and for securing ecologically sustainable development. The construction and operation phase of the mining projects.	Amounts and types of waste generated, transported and disposed will require proper licences or permits for disposal or recycling at the licensed landfill or disposal sites. Amounts and type of waste to determine the application process to be required, registration or waste licence application.

REGULATION OR GUIDELINES	RELEVANT AUTHORITY	REQUIREMENTS /IMPLICATIONS FOR THE EXPLORATION PROJECT	FUTURE PROCESSES/INTERVENTIONS REQUIRED	REFERENCE WHERE APPLIED
			general waste disposal should be adequately handled Protection of the surrounding environment through efficient waste management by ensuring proper waste collection, transportation, storage, disposal and treatment by the appointed contractor. Should the sediment waste be classified and deemed to be hazardous a licence will be required for its disposal. Waste generated during the clearing of the site.	Section 1(e) and f) of the EMPr Section j) of the BAR
National Norms and Standards for the Storage of Waste (Government Notice No. 926 of 2013)		The proper standards to be followed for storage of waste as it is generated.	Waste generated during the clearing of the site and the construction phase of the mining project. Amounts and types of waste generated, transported and disposed will require proper licences or permits for disposal or recycling at the licensed landfill or disposal sites.	Section 1(e) and f) of the EMPr Section j) of the BAR
List of Waste Management Activities that have, or are likely to have a detrimental effect on the environment (Government Notice No. 921 of 2013)		Gives activities that may result in negative impacts on the environment or its resources. These activities would have to be carried out with measures in place to minimize or mitigate possible impacts.	To meet the requirements of this regulation, waste generating activities have been mentioned in the impacts section. This is done so they can be managed or avoided where possible.	Section 1(e) and f) of the EMPr Section j) of the BAR
National Environmental Management Waste		Provisions for classification of waste at source and handling to minimize negative impacts.	Waste streams have to be classified and then handled according the relevant specifications.	Section 1(e) and f) of the EMPr

REGULATION OR GUIDELINES	RELEVANT AUTHORITY	REQUIREMENTS /IMPLICATIONS FOR THE EXPLORATION PROJECT	FUTURE PROCESSES/INTERVENTIONS REQUIRED	REFERENCE WHERE APPLIED
Classification and Management Regulations (Government Notice No. 634 of 2013)	National Environmental Management: Biodiversity Act (No. 10 of 2004) (NEM: Biodiversity Act)		<p>Provides for the provision of protection of South African flora and fauna.</p> <p>During clearing and construction, all indigenous flora and fauna must be identified and not disturbed. Permission for removal or relocation must be sought from relevant authority.</p>	<p>The provisions of the Act and Regulations must be utilised in the compilation of any mitigation measures for biodiversity management through proper rehabilitation measures. This includes the protection of species and ecosystems; the sustainable use of indigenous biological resources; the fair and equitable sharing of benefits arising from bioprospecting involving indigenous biological resources; and the establishment of a South African National Biodiversity Institute.</p> <p>Care to be given to riparian vegetation in the project area as well as grazing livestock.</p>

REGULATION OR GUIDELINES	RELEVANT AUTHORITY	REQUIREMENTS /IMPLICATIONS FOR THE EXPLORATION PROJECT	FUTURE PROCESSES/INTERVENTIONS REQUIRED	REFERENCE WHERE APPLIED
Alien and Invasive Species Regulations (Government Notice No. 598 of 2014) National Environmental Management: Protected Areas Act (No. 57 of 2003)	Invasive species are now deemed to be a legal liability of the property owner and it is up to the landowner to ensure that all invasive species are safely removed from their land in accordance with the regulations and permitting requirements.	Where project activities are being done on state land, measures have been outlined in the impacts section so as to minimize the spread of the alien invasive species.	Section h) iv); j) and k) of the BAR Section k) of the EMPr	
National Environmental Management: Air Quality Act. (No 39 of 2004 (NEM: Air Quality Act)	Generation of dust during the clearance of vegetation and mining activities	Mitigation measures proposed for dust control and dustfall monitoring.	Section i)	
SANS 10103:2008 'The measurement and rating of environmental noise with respect to annoyance and to speech communication', Edition 6.	Generation of noise during the clearance of vegetation and mining activities.	Make sure there is management of noise generation to avoid community disturbances.	Section j) and l) of the BAR Section d) iii) , e); f) and k) of the EMPr	
SANS 10357:2004 'The calculation of sound propagation by the Concawe method'. Edition 1.2.	Gives acceptable standards and procedures for the measurement and calculation of sound pressure transmission as outlined by the Concawe Method.	Noise measurements to be done in accordance with the standards	Section k of the EMPr	

REGULATION OR GUIDELINES	RELEVANT AUTHORITY	REQUIREMENTS /IMPLICATIONS FOR THE EXPLORATION PROJECT	FUTURE PROCESSES/INTERVENTIONS REQUIRED	REFERENCE WHERE APPLIED
National Dust Control Regulations (Government Notice No 827 of 2013)	City Metros/Local Municipalities	Generation of dust during the clearance of vegetation and construction activities for the mining infrastructure.	Mitigation measures proposed for dust control and dustfall monitoring	Section j) and l) of the BAR
NWA	Department of Human Settlement, Water and Sanitation (DHSW&S)	Provides for all aspects relating to pollution of surface water. To take all reasonable measures to prevent any pollution of a water resource from occurring, continuing or recurring.	Mitigation measures to protect the water resources and minimise water pollution must be proposed and implemented through the approved EMP.	Section d) i); e); f); h) and k) of the EMP _r

REGULATION OR GUIDELINES	RELEVANT AUTHORITY	REQUIREMENTS /IMPLICATIONS FOR THE EXPLORATION PROJECT	FUTURE PROCESSES/INTERVENTIONS REQUIRED	REFERENCE WHERE APPLIED
		control water resources as a whole. The basic human needs and the environment, and the Act requires that water is 'reserved' for these needs before water is allocated for other uses. Water use is controlled through regulating the way it can be used. The NWA regulates water use through the registration of water use through different types of authorisations (Water Use Licence (WUL) or GA).		
WUL in terms of NWA for water uses	DHSW&S	Provisions for the issuance of WUL to water users.	Water will be sourced from the local municipality, hence, a water use licence will not be sought. No water use licence will be sought.	Section d) ii) of the EMP Section i) of the BAR
National Forests Act (No. 84 of 1998)	DFFE	Provisions for management of forests and use of resources from such. It regulates the management of certain tree species that are classified as protected.	Cutting, disturbing, damage or destruction of any protected tree except under licence from the Minister is prohibited (Section 15). As yet no trees have been designated as protected under this legislation. Therefore, regulations in terms of the National Forest Act 122 of 184 are still applicable in this regard until new regulations in terms Sections 53 and 54 of the National Forest Act of 1998 are promulgated. All protected trees	Section d) iii) and f) of the EMP Section i) of the BAR

REGULATION OR GUIDELINES	RELEVANT AUTHORITY	REQUIREMENTS /IMPLICATIONS FOR THE EXPLORATION PROJECT	FUTURE PROCESSES/INTERVENTIONS REQUIRED	REFERENCE WHERE APPLIED
Conservation of Agricultural Resources Act (No. 43 of 1983)	Department of Agriculture, Land Reform and Rural Development (DALRRD)	Conservation of Agricultural Resources Act 43 of 1983; Section 5 of the Act prohibits spreading of weeds. Controls the utilisation and protection of wetlands, soil conservation, control and prevention of veld fires, control of weeds and invasive plants. Regulations stipulate that weeds and invader plants should be eradicated or controlled in areas where they are not used for recreational or economic purposes. Clearance of land must be checked if it is not agricultural land	are listed in Schedule A of the existing regulations. No cutting of trees is expected.	Section h) iv); i) and k) of the BAR Section k) of the EMPR
Hazardous Substances Act (No 15 of 1973).			Implementation of control measures for alien and invasive plant species.	Section 1(e) and f) of the EMPR Section j) of the BAR

REGULATION OR GUIDELINES	RELEVANT AUTHORITY	REQUIREMENTS /IMPLICATIONS FOR THE EXPLORATION PROJECT	FUTURE PROCESSES/INTERVENTIONS REQUIRED	REFERENCE WHERE APPLIED
Occupational Health and Safety Act (No. 85 of 1993)	General duties of employers to their employees. General duties of employers and their self-employed persons to persons other than the employees. Safety ensured during clearing, construction, operational and maintenance phases of the project.	OHS Act known to all employees. SHE Policy and Plan. Occupational Safety Training. PPE issue, management and compliance.	Section j) of the BAR Section f) of the EMPR	
Heritage Resources	National Heritage Resources Act (Act No. 25 of 1999) (NHRA) Section 5, Subsection 6	It governs the integration of heritage resources conservation in economic development projects. It states that when any paleontological resources are discovered during development work, works must cease and a report done to the SAHRA. Controls for the protection of natural and cultural heritage resources. No person may, without a permit issued by SAHRA or a provincial heritage resources authority— (a) destroy, damage, alter, exhume or remove from its original position or otherwise disturb the grave of a victim of conflict, or any burial ground or part thereof which contains such graves; (b) destroy, damage,	Considerations for the preservation and avoidance of possible paleontological resources disturbance must be made at the planning stage where designs are still in the initial stage. The EMP will have provisions for dealing with such. NHRA requires that an environmental assessment is undertaken for any development exceeding 0.5 ha. All identified archaeological sites must be registered with the SAHRA. A permit in terms of Section 40 of NHRA is required for disturbance of archaeological sites. Permits in terms of Section 41 of the NHRA are required for disturbance of grave sites. These permits are obtained from SAHRA (or the provincial heritage agency).	Section h) iv) and j) of the BAR Section f) of the EMPR

REGULATION OR GUIDELINES	RELEVANT AUTHORITY	REQUIREMENTS /IMPLICATIONS FOR THE EXPLORATION PROJECT)	FUTURE PROCESSES/INTERVENTIONS REQUIRED	REFERENCE WHERE APPLIED
Section 76 of this Act				

f) Need and desirability of the proposed activities.

(Motivate the need and desirability of the proposed development including the need and desirability of the activity in the context of the preferred location).

For years, mining has been the driving force behind South Africa's economy and continues to make a valuable contribution to the country's economy contributing. In recent years, there has been an increase in the production of ferrous metals and this increase has given rise to the the mining of iron ore. In 2018, total iron ore rand sales increased by 3.7% and export sales have doubled over the last decade to 61 million tonnes in 2018 up from 32 million tonnes in 2008 (Minerals Council South Africa, 2019). South Africa is the world's leading producer of manganese, accounting for about 75% of the world's identified manganese resources, producing more than 14.9 million tonnes in 2018, up from 14.3 million tonnes in 2017. Most manganese deposits in South Africa are located in the Northern Cape Province (Brynes, 2016) and much of the manganese produced is exported.

In terms of employment, the iron ore industry recorded an increase by 6.2% between 2017 and 2018 to 18,613 and R6.6 billion was paid to employees. In 2018, the manganese industry employed 9 352 direct employees with and employee earnings amounting to R3 billion. Although South Africa is a top producer of a range of minerals and metals, the mining sector has fallen to around 7 % of GDP in 2019 commesurating a drop in employment to around 400 000 (World Bank, 2020). Loss of employment results in reduced standards of living as well as an increase in poverty levels. It is predicted that mining will still play an important role to the economy, most notably through foreign exchange earnings and employment provision. It is also one of the primary sectors that provide employment opportunities for unskilled and semi-skilled people.

The South African mining industry has its origin in small-scale and artisanal mining activities, with these operations offering much needed employment opportunities and entrepreneurship, as well as contributing to the mineral sector and local economy (Ledwaba, 2017). Small-scale mining impact on employment is especially observed in small towns and rural areas where there are limited opportunities; providing significant livelihood for rural communities and a means of alleviating poverty.

The proposed project is for a small-scale mining operation in Postmasburg town, Northern Cape Province and its establishment will create employment opportunities for unskilled and semi-skilled people, thereby improving physical, psychological, developmental, cultural and social needs and interests of the relevant communities.

According to Tsantsabane Local Municipality Integrated Development Plan (IDP) 2020–202, mining has played a major role in shaping the economic development of the area. The area is rich in minerals which has historically been the mainstay of the area's economy with iron and manganese mining crucial mining activities to the economy of the area. In addition, the Tsantsabane Local Municipality IDP indicate that there are significant undeveloped mineral resources left in the area that can contribute to future economic growth in the area depending on the future viability of exploiting the minerals. An assessment undertaken during Phase 1, which entails desktop and data analysis, show that if undertaken, this project will involve the exploration of unexploited mineral resources and this will contribute to local economy growth.

The agricultural sector has been a positive contributor to the country's GDP growth with an increase of 28.6%, becoming the strongest performer (15.1%) in the second quarter of 2020 despite the unpleasant conditions of COVID-19 pandemic and agriculture continued to increase at a rate of 18.5% in the quarter of 2020 (National Agricultural Marketing Council (NAMC), 2020). In addition, the NAMC indicate that the agricultural sector is expected to witness a positive growth in the future. This indicate that the sector is of crucial importance and considering that the proposed project will be undertaken within farmlands, contribution of the agricultural sector should be considered.

The city makes a commitment to prioritise economic growth and job creation as strategies that can result in employment creation and poverty alleviation. In addition, the city also recognises the availability of manganese and iron ore deposits in the greater ZF Mgcawu district municipal area and how exploration of such resources would contribute to local economy as well as improving the quality of life to the dwellers. Therefore, if granted the proposed project will offer employment opportunities and contribute to the city's local economy as well as improvement to quality of life.

Mining has had a negative impact on land resources within the Tsantsabane Local Municipality and has negatively impacted the environment. Currently the proposed site has been transformed by historic mining activities and the baseline environment of the project area consists of low sensitivity plant species themes (Department of Environmental Affairs, 2021). The project will not have a significant negative impact on the ecological integrity of the surrounding area as the footprint is limited to transformed areas, classified as low ecological sensitivity. The ecological objectives or targets of the area are also limited by the fact that the area has been previously transformed and degraded, resulting in limited conservation potential. To ensure that all identified impacts are addressed, mitigation measures are detailed in the Environmental Management Plan (EMPr). In addition, residual impacts have been identified and the management thereof has been detailed in the EMPr.

g) Motivation for the overall preferred site, activities and technology alternative.

This section outlines the motivation for preferred project alternatives that have been considered for the site, project activities and the technology.

Site Alternatives

Given the extensive and already existing geological mapping and surveys that have been carried out by the Geological Society of South Africa, the project has no site alternatives as there are already maps to select suitable areas for exploration.

Activity Alternatives

The major project activity is exploration. Exploration will determine if there is enough iron ore and or manganese that is economically feasible to extract.

Technology alternatives

A technology alternative has not been selected yet. However, the selected technology will depend on the one with more efficiency, reasonable cost and the least environmental impacts.

h) Full description of the process followed to reach the proposed preferred alternatives within the site.

NB!! – This section is about the determination of the specific site layout and the location of infrastructure and activities on site, having taken into consideration the issues raised by interested and affected parties, and the consideration of alternatives to the initially proposed site layout.

The notification of interested and affected parties will be undertaken at the beginning of the public review and commenting period commencing on 19 April 2021 to 21 May 2021. During the period, I&APs will be awarded an opportunity to comment on the draft BAR and submit their project comments where captured and addresses in the Final BAR to be submitted to the Competent Authority.

i) Details of the development footprint alternatives considered.

With reference to the site plan as provided above and the location of the individual activities on site, provide details of the alternatives considered with respect to:

- (a) the property on which or location where it is proposed to undertake the activity;

The proposed activities will be undertaken on farms Thorns 407, Duine 437, Record 411, Loskop 414, Oatlands 406 and Towton 415. For the site, there were no alternatives as this was the best area for exploration as evidenced by the South African Geological Map.

- (b) the type of activity to be undertaken;

The proposed activities will involve the exploration of iron and manganese ore using invasive and non-invasive techniques. Invasive techniques are those that will result in land disturbances and this will include drilling of a total of 30 holes. An analysis of all the potential manganese and iron intersections will be carried out the drilling (diamond, aircore, or RAB or RC) of the prospective areas will commence to establish presence of mineralisation. Initially, about 10 drill-holes will be drilled at varied depths from 50 to 100m. Depended on the results of the initial drilling, further 30 drill-holes totalling about 2000 meters may be required.

- (c) the design or layout of the activity;

The project layout plan is attached as Appendix d1-1.

- (d) the technology to be used in the activity;

Technologies being considered for the proposed activities include diamond, Diamond, Air Core, Rotary Air Blast (RAB) or Reverse circulation (RC) for drilling. In addition, remote sensing including satellite imagery and aerial photography will be used during the mapping of resources.

- (e) the operational aspects of the activity; and

Operational activities will involve the drilling of a total of 40 boreholes. The drill holes will be drilled in two phases. Phase 1 will involve the drilling of 10 drill-holes at varied depths from 50 to 100m and a further 30 drill-holes totalling about 2000 meters will be drilled depending on the results from Phase 1. Operational activities will also include geological trenching and excavations.

- (f) the option of not implementing the activity.

There are no alternatives being considered for this project.

ii) Details of the Public Participation Process Followed

Describe the process undertaken to consult interested and affected parties including public meetings and one on one consultation. NB! The affected parties must be specifically consulted regardless of whether or not they attended public meetings. Information to be provided to affected parties must include sufficient detail of the intended operation to enable them to assess what impact the activities will have on them or on the use of their land.

The Public Participation approach adopted in this process is in line with the processes stipulated in Regulation 40 to 44 of the NEMA: Environmental Impact Assessment Regulations, 2014: GN R326. The process undertaken meet the required standards as listed in the regulations and this is summarised in Table hii1-1.

On 15 March 2020, a National State of Disaster was declared and regulations related to the manner in which the public participation process should be conducted, to comply with COVID-19 regulations and guidelines were promulgated by DFFE. On 05 June 2020, DFFE promulgated Regulation 650, published in Government Gazette 43412 providing directions to be adhered to during public participation process with an aim of addressing, preventing and combating the spread of COVID-19 related to environmental management processes. Following the June 2020 directions, a couple of directions regarding measures to address, prevent and combat the spread of COVID-19 relating to national environmental management permits and licences were promulgated. These regulations will influence the manner in which stakeholder engagement will be undertaken for this project.

Methods of communication

The following notification and communication methods will be applied during the public participation process:

- Email communication
- SMS communication
- Door-to-door notification
- Telephone communication
- Face-to-face meetings, if need be.

The stakeholder engagement process will involve the following activities:

- Stakeholder profiling, data collection and identification of relevant stakeholders and Interested and Affected Parties (I&APs);
- Data verification and preliminary consultation;
- Notification of stakeholders and I&APs;
- Stakeholder Engagement; and
- Collation and consolidating of issues raised during the I&AP engagement and commenting and public review period.

Table hii1-1: Checklist for Compliance with Public Participation Process Regulations

Section of Regulation	Requirement or Description	Activities undertaken to Comply
40 (1) (a)	(1) The public participation process to which the— (a) basic assessment report and EMPr, and where applicable the closure plan, submitted in terms of regulation 19; was subjected to must give all potential or registered interested and affected parties, including the competent authority, a period of at least 30 days to submit comments on each of the basic assessment report, EMPr, scoping report and environmental impact assessment report, and where applicable the closure plan, as well as the report contemplated in regulation 32, if such reports or plans are submitted at different times.	Allowing I&APs an opportunity to submit written comments during notification and public review periods as detailed in Section h) ii. c.
40 (2) (a) (b) (c) (d)	(2) The public participation process contemplated in this regulation must provide access to all information that reasonably has or may have the potential to influence any decision with regard to an application unless access to that information is protected by law and must include consultation with— (a) the competent authority; (b) every State department that administers a law relating to a matter affecting the environment relevant to an application for an environmental authorisation; (c) all organs of state which have jurisdiction in respect of the activity to which the application relates; and (d) all potential, or, where relevant, registered interested and affected parties.	Availing documents for public review as detailed in Section h) ii. c and d.
40 (3)	(3) Potential or registered interested and affected parties, including the competent authority, may be provided with an opportunity to comment on reports and plans contemplated in subregulation (1) prior to submission of an application but must be provided with an opportunity to comment on such reports once an application has been submitted to the competent authority.	Allowing I&APs an opportunity to comment on the documents for a 30-day period as detailed under Section h) ii. d.

Section of Regulation	Requirement or Description	Activities undertaken to Comply
41 (2) (a) (i) (ii)	<p>(a) fixing a notice board at a place conspicuous to and accessible by the public at the boundary, on the fence or along the corridor of—</p> <p>(i) the site where the activity to which the application or proposed application relates is or is to be undertaken; and</p> <p>(ii) any alternative site;</p>	<p>A site notice was erected on site and other strategic points as detailed in Section Section h) ii. c.</p>
41 (2) (b) (i) (ii) (iii) (iv) (v) (vi)	<p>b) giving written notice, in any of the manners provided for in Section 47D of the Act, to—</p> <p>(i) the occupiers of the site and, if the proponent or applicant is not the owner or person in control of the site on which the activity is to be undertaken, the owner or person in control of the site where the activity is or is to be undertaken and to any alternative site where the activity is to be undertaken;</p> <p>(ii) owners, persons in control of, and occupiers of land adjacent to the site where the activity is or is to be undertaken and to any alternative site where the activity is to be undertaken;</p> <p>(iii) the municipal councillor of the ward in which the site and alternative site is situated and any organisation of ratepayers that represent the community in the area;</p> <p>(iv) the municipality which has jurisdiction in the area;</p> <p>(v) any organ of state having jurisdiction in respect of any aspect of the activity; and</p> <p>(vi) any other party as required by the competent authority;</p>	<p>Notification emails were sent to the stakeholders. In addition, physical notification was also done as detailed in Section h) ii. c.</p>
41 (2) (c) (i) (ii)	<p>c) placing an advertisement in—</p> <p>(i) one local newspaper; or</p> <p>(ii) any official that is published specifically for the purpose of providing public notice of applications or other submissions made in terms of these Regulations;</p>	<p>Placement of newspaper advert in a local newspaper as detailed in Section h) ii. c.</p>
41 (3) (a) (b) (i) (ii) (iii) (iv)	<p>(3) A notice, notice board or advertisement referred to in subregulation (2) must—</p> <p>(a) give details of the application or proposed application which is subjected to public participation; and</p>	<p>A site notice and advertisement containing the required information</p>

Section of Regulation	Requirement or Description	Activities undertaken to Comply
	(b) state— (i) whether basic assessment or S&EIR procedures are being applied to the application; (ii) the nature and location of the activity to which the application relates; (iii) where further information on the application or proposed application can be obtained; and (iv) the manner in which and the person to whom representations in respect of the application or proposed application may be made.	were developed as detailed in Section h) ii. c.
41 (4) (a) (b)	(4) A notice board referred to in subregulation (2) must— (a) be of a size of at least 60cm by 42cm; and (b) display the required information in lettering and in a format as may be determined by the competent authority.	An A2 size site notice was erected on site and other strategic points as detailed in Section h) ii. c.
41 (6) (a) (b)	(6) When complying with this regulation, the person conducting the public participation process must ensure that— (a) information containing all relevant facts in respect of the application or proposed application is made available to potential interested and affected parties; and (b) participation by potential or registered interested and affected parties is facilitated in such a manner that all potential or registered interested and affected parties are provided with a reasonable opportunity to comment on the application or proposed application.	Availing documents for review in electronic format as detailed in Section h) ii. e.
42 (a) (b)	A proponent or applicant must ensure the opening and maintenance of a register of interested and affected parties and submit such a register to the competent authority, which register must contain the names, contact details and addresses of— (a) all persons who, as a consequence of the public participation process conducted in respect of that application, have submitted written comments or attended meetings with the proponent, applicant or EAP; (b) all persons who have requested the proponent or applicant, in writing, for their names to be placed on the register; and (c) all organs of state which have jurisdiction in respect of the activity to which the application relates.	Development and maintenance of an Interested and Affected Parties (I&AP) Register as detailed in Section h) ii. a.

Section of Regulation	Requirement or Description	Activities undertaken to Comply
43 (1)	(1) A registered interested and affected party is entitled to comment, in writing, on all reports or plans submitted to such party during the public participation process contemplated in these Regulations and to bring to the attention of the proponent or applicant any issues which that party believes may be of significance to the consideration of the application, provided that the interested and affected party discloses any direct business, financial, personal or other interest which that party may have in the approval or refusal of the application.	Allowing I&APs an opportunity to submit written comments during notification and public review periods as detailed in Section h) ii. e.
44 (1)	(1) The applicant must ensure that the comments of interested and affected parties are recorded in reports and plans and that such written comments, including responses to such comments and records of meetings, are attached to the reports and plans that are submitted to the competent authority in terms of these Regulations.	Capturing of comments and responses as detailed in Section h) ii. e and Section h) iii.
45	An application in terms of these Regulations lapses, and a competent authority will deem the application as having lapsed, if the applicant fails to meet any of the time frames prescribed in terms of these Regulations, unless extension has been granted in terms of regulation 3(7).	The public participation timeframes were complied with by ensuring that the public review period timeframes are adhered to.

a. Stakeholder profiling and identification of I&APs

During the period of January to February 2021, key stakeholder were identified including national, provincial, local authorities, civil society organisations and landowners. A list of the identified I&APs is attached as Appendix h)ii)a1-1. The process also involved undertaking a desktop review of the project area, document review, analysis and review of relevant legislation. Local setting maps were also used to identify adjacent landowners and current and planned land uses. In addition, winded search was used to identify landowners.

b. Data verification and preliminary consultation

Validation of collated information was done through literature review of existing documents and reports such Tsantsabane Local Municipality 2020-2021 IDP; Tsantsabane Local Municipality Spatial Development Framework, 2015; Local Economic Development Plans; Municipal by-laws, and Provincial ordinances, documents submitted to the Competent Authority by the proponent, local setting maps, and relevant legislation and statutes. In addition, a request for a land zoning certificate has been sent to Tsantsabane Local Municipality.

c. Notification of stakeholders and I&APs

To ensure that stakeholders are informed of the proposed activities, an advert was published and site notices were placed on the project site and at strategic points around the project area. The advert was published in Kathu Gazette on 17 April 2021 and the site notices were placed at strategic points around the project area marking the beginning of the public review and commenting period that commenced on 19 April 2021. Proof of advert published in the newspaper is attached as hiic1-1. Notification letters were sent through email and attempt to undertake physically notification was done, however this was not successful due to access issues as most gates were locked. A sample of the notification letter sent out to I&APs is attached as Appendix hiic1-2a and the notification emails sent are attached as Appendix hiic1-2b. Upon receipt of the notification during physical notification, I&APs would be required to sign an acknowledgement of receipt register, attached as Appendix hiic1-3, however, the register is not signed due to the fact that access to the properties was limited. An I&AP registration form, Reply Slip, was also shared with I&APs and it was indicated that the I&APs may optionally use the form to submit their comments and or concerns. A copy of the Reply Slip is attached as Appendix hiic1-4. As indicated, the I&APs were awarded a 30-day period to submit written comments during the notification period and the public review period, which commenced on 19 April 2021 to 21 May 2021.

d. Stakeholder Engagement

During the stakeholder identification period, telephone engagements were done with the key stakeholders including the Ward Councillors. It was noted that the proposed project is located in Ward 6 of the seven municipalities in Tsantsabane Local Municipality. Upon identification of the relevant ward, telephone engagement was done with the ward councillor and they were notified of the proposed project. During the engagements, stakeholders were requested to confirm their positions and contact details. Following a desktop screening undertaken for the area, it was discovered that the area is not archaeological and palaentological sensitivity. However, SAHRA was identified as a commenting organ as the need to verify the findings by checking the heritage status of the area. As such Draft documents were uploaded on ISAHRIS for commenting at the beginning

of the public review period. In addition, I&APs were awarded a 30-day period to review the Draft Basic Assessment Report and Environmental Management Programme (EMPr) and comments submitted were mitigated in the final BAR. Stakeholder engagement is an ongoing process and will be undertaken until the appeals stage of the Basic Assessment Process.

e. Collation and consolidating of issues raised

I&APs were awarded a 30-day period to submit written comments during the public review period, which commenced on 19 April 2021 to 21 May 2021. In support of the commenting period, draft documents were made available on request. Initially, it was anticipated that the documents would be placed at public places for public review, however, due to the COVID-19 pandemic, most public places were either closed or did not have the capacity to oversee the review process considering strict covid protocols that need to be followed that might require monitoring. Therefore, I&APs were notified to request electronic formats of the documents should they wish to review the documents. Issues, comments and concerns to be raised by I&APs, during the public review period, were captured and an issues and response report has been produced and is attached as Appendix hiiel-1a and comments and response proof is attached as Appendix hiiel-1b.

iii) Summary of issues raised by I&APs

(Complete the table summarising comments and issues raised, and reaction to those responses)

Engagement with stakeholders was done during the stakeholder identification phase and engagement done was to confirm the details of the I&APs. As highlighted in Section h) ii. CC, notification was done at the beginning of the commenting period, which commenced on 19 April 2021 to 21 May 2021.

Agri-Kuruman	20 May 2021	Good afternoon Lyn,	Dear Eben, We would like to thank you for taking part in this public participation process. Please be advised that your organisation has been registered as an interested and affected	I understand there is a PPP being followed and would like to attend the meeting this afternoon on behalf of Agri Kuruman.

INTERESTED AND AFFECTED PARTIES List the names of persons consulted in this column, and Mark with an X where those who must be consulted were in fact consulted	DATE COMMENTS RECEIVED	ISSUES RAISED	EAPs response to issues as mandated by the applicant	Section and paragraph reference in this report where the issues and or response were incorporated.
		<p>Winton Boerevereniging is affiliated with Agri Kuruman, amongst various other local agricultural associations, and we address matters that might have a detrimental impact on sustainable food security.</p> <p>Can you please be so kind as to forward met the BID, the BAR, and EA (if granted) and any other relevant information relevant to the project.</p> <p>I trust you find this in order</p>	<p>parties for the proposed prospecting of iron and manganese on farms Thorns 407, Duine 437, Record 411, Loskop 414, Oatlands 406 and Towton 415, DMRE Reference No. NC30/5/1/1/2/1/2709 PR.</p> <p>Please be advised that we are still undertaken the public participation process in support of an environmental authorisation process, thus, an EA has not been granted. Please note that the commenting period is ending on 21 May 2021.</p> <p>Please access the project documents from the link below. Also attached is a reply slip that you conveniently use to lodge environmental based comments you have on the proposed project.</p> <p>Link: https://www.dropbox.com/sh/cq0po4dt1w1yhzzz/AAB_TWQhV3lp4RYq5RTy4yXFa?dl=0</p> <p>You are most welcome to attend the public meeting, scheduled for this afternoon, 14h00 at Winton.</p> <p>Meet you there.</p>	
Agri-Kuruman	20 May 2021	<p>Due to unknown circumstances the representative of the EAP arrived over an hour late for the meeting, after the stakeholders left in frustration. The meeting did not take place and this behavior on behalf of</p>	<p>We as Myezen Environmental Management Services (Pty) Ltd, would like to humbly apologise the late arrival of our colleague to the public meeting that was set for Thursday, 20 May 2021. With due respect, we appreciate the efforts of the Farmers Association representatives, farmers and landowners'</p>	N/A

INTERESTED AND AFFECTED PARTIES List the names of persons consulted in this column, and Mark with an X where those who must be consulted were in fact consulted	DATE COMMENTS RECEIVED	ISSUES RAISED	EAPs response to issues as mandated by the applicant	Section and paragraph reference in this report where the issues and or response were incorporated.
		<p>the EAP is unacceptable and counterproductive to the efforts of organised agriculture to establish a feasible platform of interaction between the Applicant and directly affected parties where detrimental factors might harm the sustainable and economic welfare of agriculture in the area. Numerous landowners made special efforts to attend the meeting, and some even took leave from their work. The harm done is unimaginable and the situation where we find ourselves in, meaning organised agriculture and the Applicant, will have serious consequences with regard to good faith endeavours.</p>	<p>for assisting in organising as well as attending the planned meeting. Our endeavor as an organisation is to present ourselves as professionals, as accountable and reliable. We are in the process of taking corrective measures for identified root causes to ensure that such kind of an incident does not happen again in future. We have collated all the concerns you have subsequently submitted and captured them into the report which was then submitted to Department of Mineral Resources and Energy (DMRE), including your letter of concerns.</p>	<p>Section j and l of the BAR.</p> <p>Section e of the EMPr</p>
Agri-Kuruman	20 May 2021	<p>At this point we have not worked through the prepared presentation and are not familiar with the points set out for discussion, but we can mention the critical factors that have detrimental impacts on sustainable and economic agricultural welfare:</p> <ol style="list-style-type: none"> Groundwater yield and susceptibility to contamination <p>There is very little information available in the draft BAR. Please revise and include ample information</p>	<p>Technologies to be applied during prospecting activities such as RC drilling have less impacts on ground water. Aspects, activities involved and impacts as well as mitigation measures for any possible water, both surface and ground, that might emanate from the proposed activities have been developed.</p>	<p>Section j and l of the BAR.</p> <p>Section e of the EMPr</p>

INTERESTED AND AFFECTED PARTIES List the names of persons consulted in this column, and Mark with an X where those who must be consulted were in fact consulted	DATE COMMENTS RECEIVED	ISSUES RAISED	EAPs response to issues as mandated by the applicant	Section and paragraph reference in this report where the issues and or response were incorporated.
		secondary public roads and an estimated amount of dust and noise generated.	activities. Dust control measures such as dust suppression and speed limits will be implemented. Noise might emanate from drill rigs during prospecting activities as well as vehicular movement, thus, mitigation measures for noise control have been formulated.	N/A
Agri-Kuruman	20 May 2021	3. Sufficient and acceptable mitigation measures to damaged agricultural land	No formal site visits were conducted, thus the EMPR does not include an acceptable indication of mitigation and remedial measures to be implemented on each property	Myeko made an attempt to undertake site visits to the proposed site, however, access challenges were faced. However, other forms of data sources such as GIS, maps, municipal data and documentation such as Integrated development Plans (IDPs) and Spatial Development Frameworks (SDFs) as well as Department of Forestry, Fisheries and Environment's screening tools were employed and these formed the basis of data collection for the project. Lease fees and matters pertaining to purchasing will be negotiated with the landowner once mining right has been approved. In addition, property evaluations will be done if negotiations with surface owners progress to that level.
Agri-Kuruman	20 May 2021	4. Adequate rehabilitation	No formal site visits and consultations were conducted, thus the EAP does not have an informed picture of the challenges faced with adequate rehabilitation.	During the compilation of reports, data sources such as GIS, maps, municipal data and documentation such as Integrated development Plans (IDPs) and Spatial Development Frameworks (SDFs) as well as Department of Forestry, Fisheries and Environment's screening tools were consulted and these formed the basis of data collection for the project. Therefore, rehabilitation issues were formulated basing on the

			Kindly be advised that the public meeting is scheduled for Thursday, 20 May 2021, 14h00 at Winton	
Johan Kulp	20 May 2021	Good afternoon Lyn, I understand there is a PPP being followed and would like to attend the meeting this afternoon on behalf of Agri Kuruman. Winton Boerevereniging is affiliated with Agri Kuruman, amongst various other local agricultural associations, and we address matters that might have a detrimental impact on sustainable food security. Can you please be so kind as to forward met the BID, the BAR, and EA (if granted) and any other relevant information relevant to the project. I trust you find this in order.		
Izak Kruger	20 May	Good day Sir, Thank you for taking part in this public participation process. Please be advised that you have been registered as an interested and affected parties for the proposed prospecting of iron and manganese on farms Thoms 407, Duine 437, Record 411,		

INTERESTED AND AFFECTED PARTIES List the names of persons consulted in this column, and Mark with an X where those who must be consulted were in fact consulted	DATE COMMENTS RECEIVED	ISSUES RAISED	EAPs response to issues as mandated by the applicant Section and paragraph reference in this report where the issues and or response were incorporated.
		<p>Please access the project documents from the link below. A detailed response, to submitted comments, will be sent to you.</p> <p>Link: https://www.dropbox.com/sh/cg0po4dt1w1yhzz/AAB_TWQhv3lp4RYq5RTy4vXFa?dl=0</p>	<p>Loskop 414, Oatlands 406 and Townton 415, DMRE Reference No. NC30/5/1/1/2/12709 PR.</p>
Nico and Lynette Smit	18 May 2021	<p>Good day,</p> <p>Please note that we would like register as an interested and affected party for the proposed prospecting of iron and manganese on farms Thoms 407, Duine 437, Record 411, Loskop 414, Oatlands 406 and Townton 415, DMRE Reference No. NC30/5/1/1/2/12709 PR.</p> <p>Please include us in all correspondence and documentation?</p>	<p>Dear Lynette,</p> <p>We would like to thank you for taking part in this public participation process.</p> <p>Please be advised that you have been registered as an interested and affected parties for the proposed prospecting of iron and manganese on farms Thoms 407, Duine 437, Record 411, Loskop 414, Oatlands 406 and Townton 415, DMRE Reference No. NC30/5/1/1/2/12709 PR.</p> <p>Please access the project documents from the link below. Also attached is a reply slip that you conveniently use to lodge environmental based comments you have on the proposed project.</p>

			Kindly be advised that the public meeting is scheduled for Thursday, 20 May 2021, 14h00 at Winton.	

iv) The Environmental attributes associated with the alternatives.

(The environmental attributed described must include socio-economic, social, heritage, cultural, geographical, physical and biological aspects)

An environmental screening report was generated using the DFFE screening tool and the report is attached as Appendix hiv1.1. The report has been used as reference to the biodiversity and heritage status of the project area, among other referenced documents.

(1) Baseline Environment

(a) Type of environment affected by the proposed activity.

(its current geographical, physical, biological, socio- economic, and cultural character).

A description of the environment to be affected by the proposed project is detailed below

i. Geographical

The project site is located in the TLM , which is situated in the northern-eastern part of the Northern Cape Province. Tsantsabane Municipality is one of the five municipalities in the ZFMDM (previously Siyanda District Municipality). It is a category B municipality, and is bordered by Siyancuma LM, //Khara Hais LM, !Kheis LM, Gamagara LM and Kgateleopele LM. The municipality is divided into 7 wards, and the main routes that run through Postmasberg to Beeshoek are the R385 from Kimberly, the R309 and the R325 to Kathu. Postmasburg is approximately 170 km from Kimberly and 210 km from Upington. The area consists of major towns that were established as part of the land redistribution projects in the area (Aurecon and Assmang. 2014, ZF Mgcawu District Municipality, 2019-2020). These include Biochoko, Postdene, New Town, Stasie, Groen Water, Skyfontein, Jean Heaven, marenane and the Loattha Army Battle School. The municipal falls within the Gamagara Corridor, which is a mining belt of the John Taolo Gaetsewe and Siyanda Districts, and it further extends from Lime Acres and Danielskuil to Hotazel in the north (ZF Mgcawu District Municipality, 2017-2022). The belt is largely known for its rich iron and manganese minerals. Tsantsabane Local Municipality (TLM) is approximately 588714,56704 ha. About 98.96 % of the municipal area is pristine, with very little development, which covers only 1.04% of the land area (BGIS, 2021).

ii. Physical

The ZFMDM is dominated by two biomes which are the Nama-Karoo and Savannah. TLM is characterised by Savannah Biome, covering about 95,49% (approximately 562187,6 ha) of the local municipal area with small portions of the Nama-Karoo biome, covering about 4,51% of the municipal area (Tsantsabane Spatial Development Framework 2015-2020). According to the South African National Biodiversity Institute (SANBI) BGIS portal system, the vegetation type happening within TLM are: Kalahari Mountain Bushveld, Kalahari Plains Thorn Bushveld, Kalahari Plateau Bushveld, Kalahari Karroid Bushveld, Shrubby Kalahari Dune Bushveld, Ghaap Plateau Vaalbosveld, Kathu Bushveld, Kuruman Mountain Bushveld, Kuruman Mountain Bushveld, Kuruman Thornveld, Northern Upper Karoo, Olifantshoek Plains Thornveld, Postmasburg Thornveld, Southern Kalahari Mekgacha, and Southern

Kalahari Salt Pans. The proposed project site falls within the savannah biome and the major vegetation types happening in the area are the Kuruman Mountain Bushveld and Kuruman Thornveld Tsantsabane Spatial Development Framework 2015-2020). There is no critically endangered or threatened EcoSystems in the Municipality (BGIS, 2021).

iii. Climate

The Northern Cape Province's coastline, rainfall including the Namaqualand coastal region, falls within the cool temperate region that is extremely dry with erratic rainfall, thus, the region is characterised by hot dry climate receiving only 100mm of rainfall annually (ZF Mgcau District Municipality, 2016). The ZFMDM is a semi-desert area, with extremely low summer rainfall. Extreme weather condition, such as flooding and prolonged droughts are common in the area. The area experiences low summer rainfall. The project area falls within a rain shadow, where rain generally occurs in spring and again between February and April of each year (ZF Mgcau District Municipality, 2019-2020). The average annual rainfall ranges between 150 mm and 200 mm per annum. The average summer temperatures range between 18 and 20°C, with the highest temperatures reaching 43°C and winter average temperatures range between 3°C and 20°C and very occasionally do temperatures drop to -10°C. The maximum temperatures are experienced between November and March of each year. The Minimum temperatures are experienced between May and August (Aurecon and Assmang, 2014).

iv. Biological

The ZFMDM is dominated by two biomes which are the Nama-Karoo and Savannah. TLM is characterised by Savannah Biome, covering about 95,49% (approximately 562187,6 ha) of the local municipal area with small portions of the Nama-Karoo biome, covering about 4,51% of the municipal area (Tsantsabane Spatial Development Framework 2015-2020). According to the South African National Biodiversity Institute (SANBI) BGIS portal system, the vegetation type happening within TLM are: Kalahari Mountain Bushveld, Kalahari Plains Thorn Bushveld, Kalahari Plateau Bushveld, Kalahari Karroid Bushveld, Shrubby Kalahari Dune Bushveld, Ghaap Plateau Vaalbosveld, Kathu Bushveld, Kuruman Mountain Bushveld, Kuruman Mountain Bushveld, Kuruman Thornveld, Northern Upper Karoo, Olifantshoek Plains Thornveld, Postmasburg Thornveld, Southern Kalahari Mekgacha, and Southern Kalahari Salt Pans. The proposed project site falls within the savannah biome and the major vegetation types happening in the area are the Kuruman Mountain Bushveld and Kuruman Thornveld Tsantsabane Spatial Development Framework 2015-2020). There is no critically endangered or threatened EcoSystems in the Municipality (BGIS, 2021)

The DFFE describes the biodiversity of the area as mixed low and "very high sensitivity" theme as presented on Figure hiv1iv-1. According to the DFFE (2021) a very high sensitivity rating means critical biodiversity Area 2, Ecological Support Area or South African Protected Areas. Tswalu Kalahari Nature Reserve is located about 12 km north of the project site, thus, this can contribute to the rating of the area.

Figure hiv1iv-1: Biodiversity Map (Source: DFFE, 2021).

v. Flora

The vegetation cover in the northern parts of the municipality consists of Bushveld, while the southern parts have Karoo vegetation cover, which is often succulent. The South African National Biodiversity Institute (SANBI) has classified the ZFM Municipality, and subsequently the Tsantsabane Local Municipality as “Least Threatened” the area consist of a high blend of hydrous and drought resistant plant species due to the Orange River that flows through the district municipality. The vegetation includes Wild Olive and River Willow, versus Aloe, Quiver and Camel Thorn Tree (ZF Mgcawu District Municipality, 2017-2022).

DFFE describes the area to consist of flora that fall within the “Low Sensitivity” theme as presented on Figure hiv1v-1.

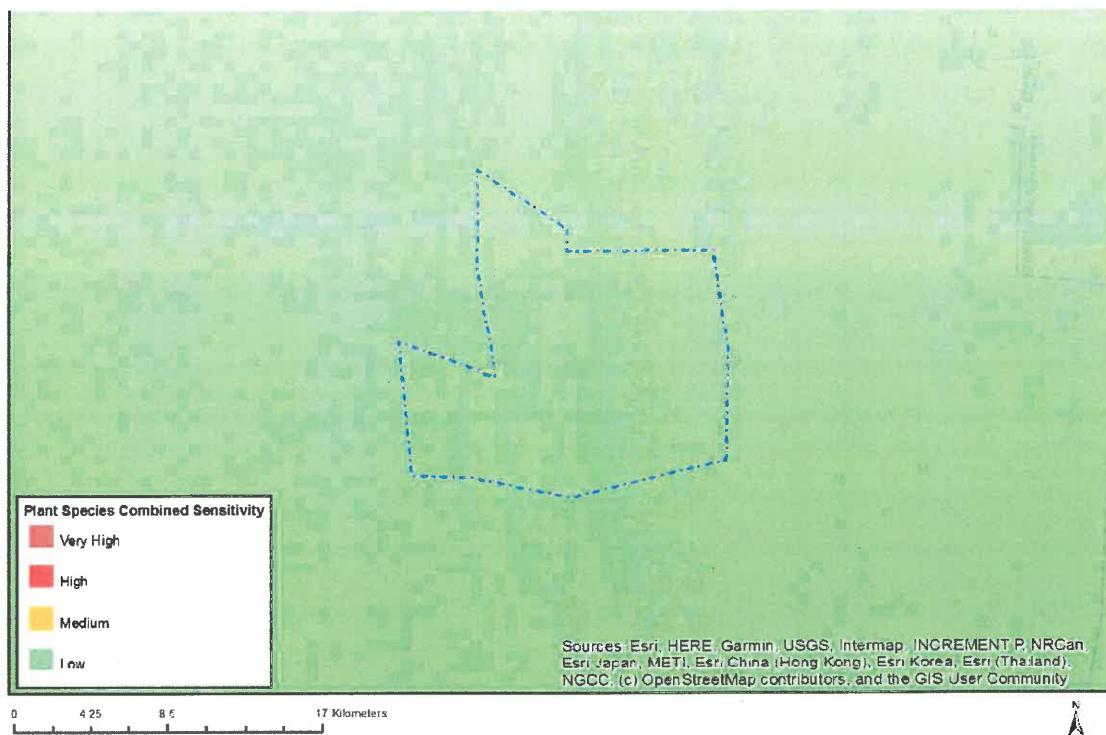

Figure hiv1v-1: Plant Species Map (Source: DFFE, 2021).

vi. Fauna

The animal species in the area are overall classified under the very low with some few occurrences of medium and low sensitivities themes as presented on Figure hiv1v-1. Falling under high sensitivity are the following species: *Aves-aquila verreauxii*, a large bird of prey and *Mammalia-Smutsia temminckii*, ground pangolin also known as the Cape of Steppe pangolin which is one of the four species of pangolins found in Africa. Under the medium sensitivity are the *Aves- Ciconia nigra* a stock bird, *Aves- Aquila verreauxii* large prey bird, *Aves-Sagittarius serpentarius* which is also a large terrestrial prey bird (DFFE, 2021).

vii. Hydrology

The Orange River is the perennial streams that flows through the municipality and sustains most of the development that takes place in the area. The flow of the Orange River is often controlled by the release of stored water in the Bloemhof, Gariep and Van der Kloof dams, which are located upstream from the river. The three main rivers that flow within the Tsanabane Municipality are Ga-Mogara, Skeffonteinspruit and another river, that is not known by the BGIS portal system. There is one wetland in the municipal area, covering 9321,3 ha (1,58%), as a result, this water resource is classified under the "Very High sensitivity" theme in the DFFE screening tool. This means that the proposed project should administer environmental management practices that will not have a negative impact on the wetland system. The ground water systems are the only water source for a majority of the rural population. The characteristics of the aquifer in the area, are mostly unfavourable, except for the Western parts of the municipality that are underlain by dolomitic Karst aquifer. The tributaries for the Orange River are mostly supplied by groundwater sources. More than 50% of the rural water supply is dependent on groundwater for domestic use (Aurecon and Assmang, 2014).

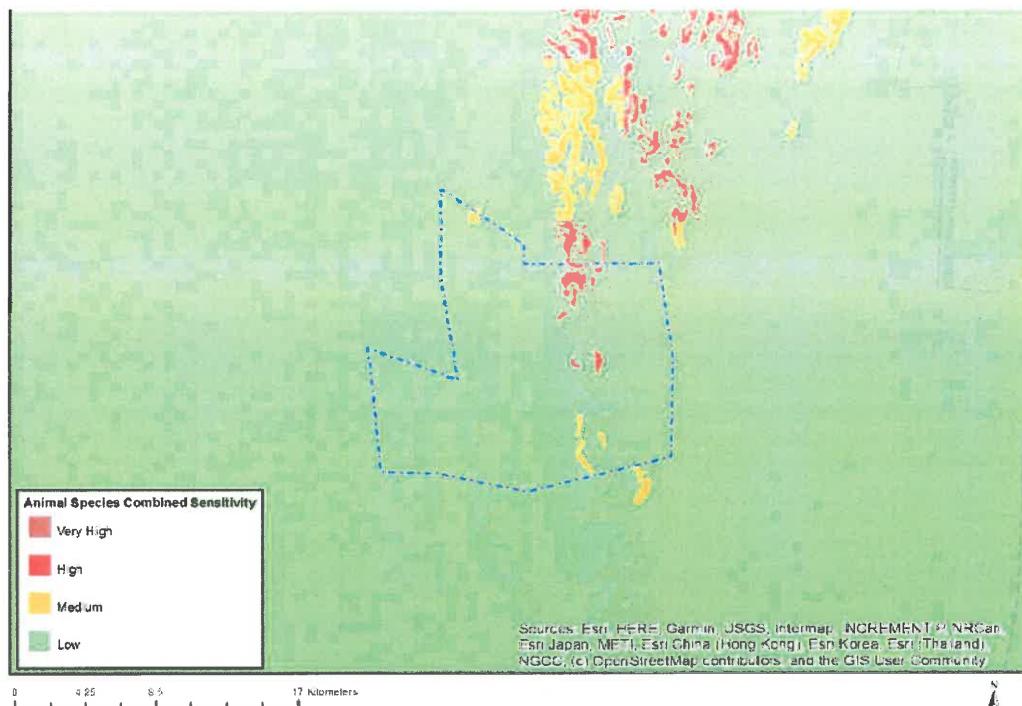

Figure hiv1vi-1: Animal Species Map (Source: DFFE, 2021).

viii. Heritage (Archaeology and Palaeontology)

According to DFFE Screening Tool (2021), the project area is categorised as “medium sensitivity” palaeontological classification theme with medium palaeontological features and the archaeological and cultural heritage sensitivity is classified under “low sensitivity” theme group. Figure hiv1vii-1 and Figure hiv1vii-2 show the palaeontological and archaeological and cultural heritage sensitivity maps respectively.

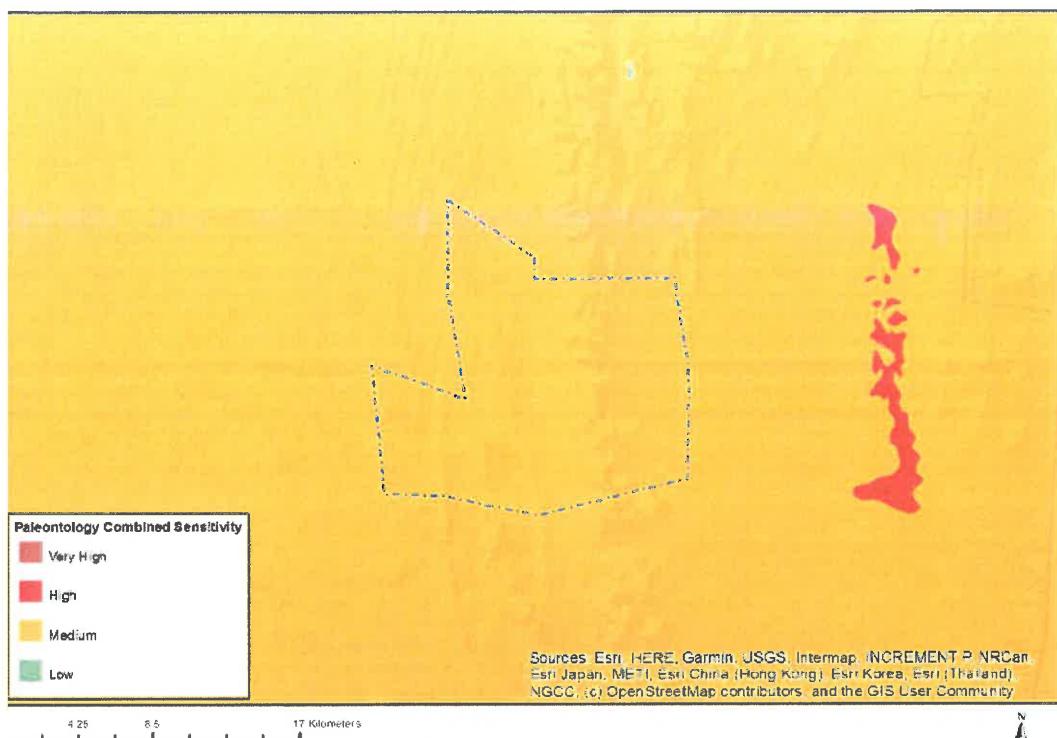

Figure hiv1vii-1: Palaeontological Sensitivity Map (Source: DFFE, 2021).

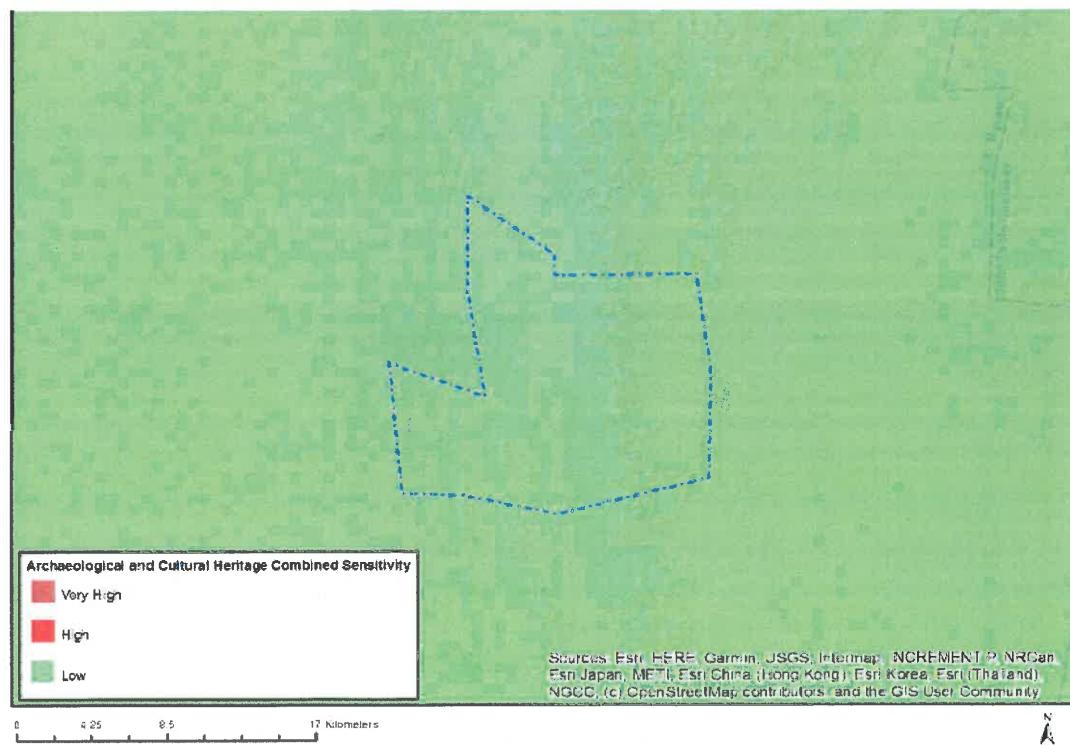

Figure hiv1vii-2: Archaeological and Cultural Heritage Sensitivity Map (DFFE, 2021).

ix. Soils (agricultural capability)

About 450 mm depth of the soils in the municipality are generally over exposed metamorphic rocks originating mostly from intrusive rocks of the folded sedimentary and volcanic rocks. The soils within the interior of the Tsantsabane Municipality, are more than 750 mm deep and thick and sandy or alluvium. Areas with greater soil depth are often more arable and should therefore be protected. As such the municipal area is sensitive to wind erosion and overgrazing, therefore increased disturbance from any developmental activity may destabilize the soils and subsequently affect floral and faunal species populations. This coincides with the “very high sensitivity” theme or classification by the DFFE screening tool report. These soils are generally either red, yellow, and greyish in colour and excessively drained sandy soils which are prone to erosion. The eastern parts of Tsantsabane have between 15% and 35% clay in the soils.

The agricultural activities involved in Municipality include agri-tourism, livestock farming and irrigation dependent crop farming, particularly grapes (ZF Mgcawu District Municipality, 2016). The soil quality of the District is considered unsuitable for dry land crop production. The crop production that is present in the Municipality, is mainly along the Orange River, with irrigated areas expanding well beyond the moist soil areas, innovative water technologies allow for the production of crops such as grapes, raisins, pistachio nuts. Field crops include wheat, cotton and lucerne. However, due to the limited water resource, Tsantsabane municipality has a very low annual crop cultivation and land capability potential Highveld biomes are characteristic of diverse geology, that is very often closely associated with the high plant species richness (SANBI, 2017).

DFFE Screening Tool (2021) indicate that the project area falls under “medium sensitivity” for agricultural themes with land capability of 06. Low-Moderate/07. Low-Moderate/08. Moderate and low sensitivity themes with land capability of 01. Very low/02. Very low/03. Low-Very low/04. Low-Very low/05 as shown of Figure hiv1ix-1.

x. Socio-economic

According to Yu (2009) a socio-economic profile indicate how economic activities affects and are shaped by social processes. For this reason, social and economic attributes of the project area will be discussed in this section. Municipal Integrated Development Plans and Spatial Development Frameworks provide a strategic guidance to municipalities, and link and coordinate the many different sectoral plans

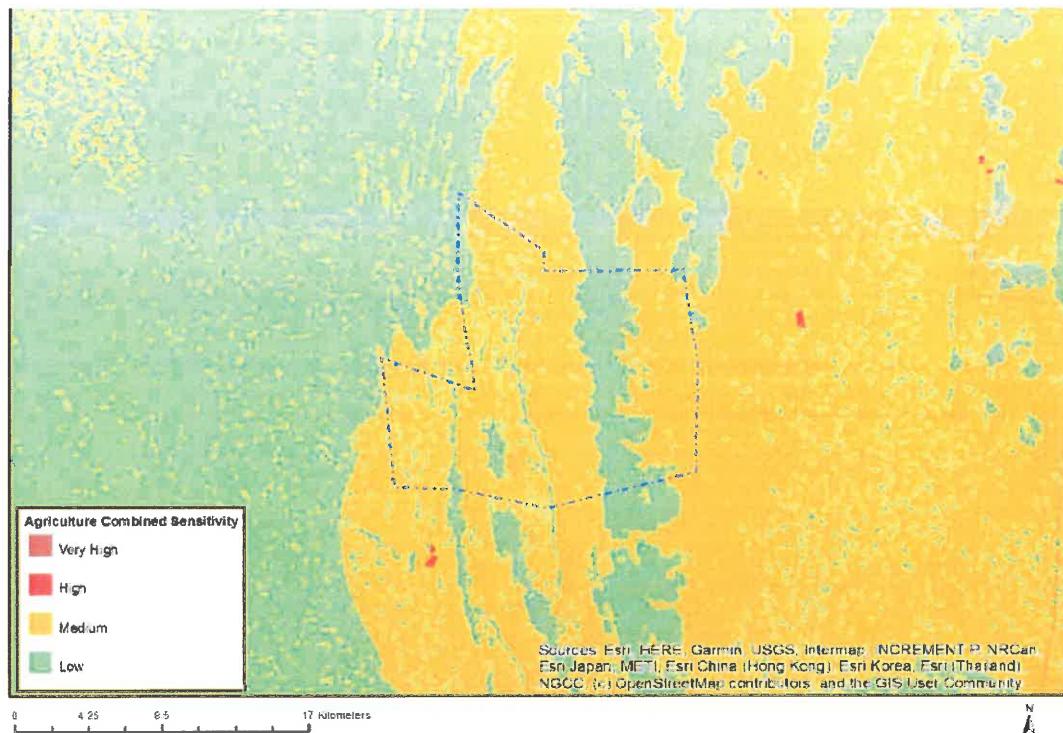

Figure hiv1x-1: Agricultural Sensitivity Map (Source: DFFE, 2021).

and planning processes (Harrison, 2001), therefore, information used to compile this section is largely derived from Tsantsabane Local Municipality 2020-2021 Integrated Development Plan and Tsantsabane Local Municipality Spatial Development Framework, 2015. In addition, Statistics South Africa provide crucial data. However, it should be noted that other sources were also consulted and referenced. The socio-economic indicators are presented on Table hiv1x-1 and a detailed Socio-economic Report is attached as Appendix t1-1.

Table hiv1x-1: Socio-economic Indicators

Key Indicator	ZF Mgcawu District Municipality	Tsantsabane Local Municipality
Population		
Population under 15	26.9%	25.9%
Population 15 to 64	68.1%	69.9%
Population over 65	5.0%	4.2%
Sex Ratio		
Males per 100 females	105.0	115.5
Education		
1. No schooling	6.1%	13.7%
2. Matric	28.5%	25.3%
3. Higher education	5.1%	6.3%

Key Indicator	ZF Mgcau District Municipality	Tsantsabane Local Municipality
Labour Market		
Unemployment rate	19.2%	26.1%
Youth unemployment rate (official) 15-34	22.7%	32.3%
Health Facilities		
Clinics	52	7 (3 fixed and 4 mobile)
Community Health Centres	2	0
Regional Hospital	5	1
Household Dynamics		
Households	74 091	11 821
Average household size	3.4	3.3
Female headed households	35.5%	32.0%
Formal dwellings	75.9%	77.9%
Housing owned	62.5%	67.5%
Access to Basic Services		
Water (Piped)	45.6%	44.6%
Sanitation (Flush)	65.7%	76.1%
Electricity/Solar	85.5%	84.9%
Weekly Refuse Removal	67.6%	52.5%
Economy		
Major sectors		
Mining	22%	74%
Agriculture	12%	20%
Community Services	21%	4%

Integrated Development Plan; Tsantsabane Local Municipality Spatial Development Framework, 2015.

xi. Cultural

In the late 1820's a mass-movement of Dutch speaking people in the Cape Colony started advancing into the northern areas. This was due to feelings of mounting dissatisfaction caused by economical and other circumstances under British rule in the Cape. This movement later became known as the Great Trek. This migration resulted in a massive increase in the extent of that proportion of modern South Africa dominated by people of European descent (Ross 2002: 39).

As can be expected, the movement of whites into the Northern provinces would have a significant impact on the black people who populated the land. The Northern Cape is the largest province in South Africa, but has the least number of inhabitants and is mostly desert, including Namaqualand, great parts of the Karoo and parts of the Kalahari desert. These deserts were the home of many Khoikhoi and San groups, and there are still examples of San Rock Art (South African History, 2011).

Postmasburg was originally the site of a mission station named Sibilhong, founded by the London Missionary Society. Later it was named Blinkklip by the former tribes and for many years it acted as an outpost for the Griqua people and as the church centre for the European farming community (Tsantsabane Local Municipality, 2018). However, archaeological findings indicate that Khoisan mined specularite there from at least AD 700. The town was eventually proclaimed on 6 June 1892 and was renamed Postmasburg in honour of Reverend Dirk Postma, the first minister of the Reformed Church. The discovery of diamonds in 1918, followed by manganese assisted in the growth of this small village.

(a) Description of the current land uses

The current land uses were identified using GIS maps as well as on site observation. The proposed site is made up of six privately owned farms which are Thorns 407, Duine 437, Record 411, Loskop 414, Oatlands 406 and Towton 415. Falling within the Savannah biome, the area is dominated woodlands and grasslands as indicated in Section hiv of this Report. Farm Loskop 414 has a dry pan and water pumps that are used to pump water were observed on the site. In addition, a non-perennial river was observed. On Farm Duine 437 livestock kraals, build-up area and wind pump situated close to the kraal were observed. Farm Towton 415 has cultivated land, windpumps and a non-perennial river stretching out on the whole farm. Farm Oaklands 406 has cultivated land with a perennial river running through the farm and wind pumps were also observed on the farm. In addition, hiking trails and powerlines were also observed on the project area.

Mining (manganese and iron ore) and Agriculture are the major landuses in the region and from the discussion above, it can be concluded that agricultural activities are taking place in the area highlighted by the presence of cultivated land, kraals and wind and water pumps. Currently, there are no mining activities that were observed on site and the surrounding farms.

In addition, an aerial view and topographical map showing environmental features, such as rivers, protected areas, watercourses, pans, coastal rocks, marshes and vleis, cultivated lands, woodlands, orchards or vineyards, trees built-up areas, and many other infrastructure was generated and is presented on a map, Figure iv1b1-1. The generated map show that agricultural activities are being undertaken on some parts of the proposed site.

(b) Description of specific environmental features and infrastructure on the site.

Some environmental features observed on the proposed project site include perennial and non-perennial water and some coastal rocks. Current infrastructure include: build-up areas, powerlines, wind pumps, and access roads.

(c) Environmental and current land use map.

(Show all environmental, and current land use features).

Currently, the land is used for mining and minerals such as diamonds are being mined.

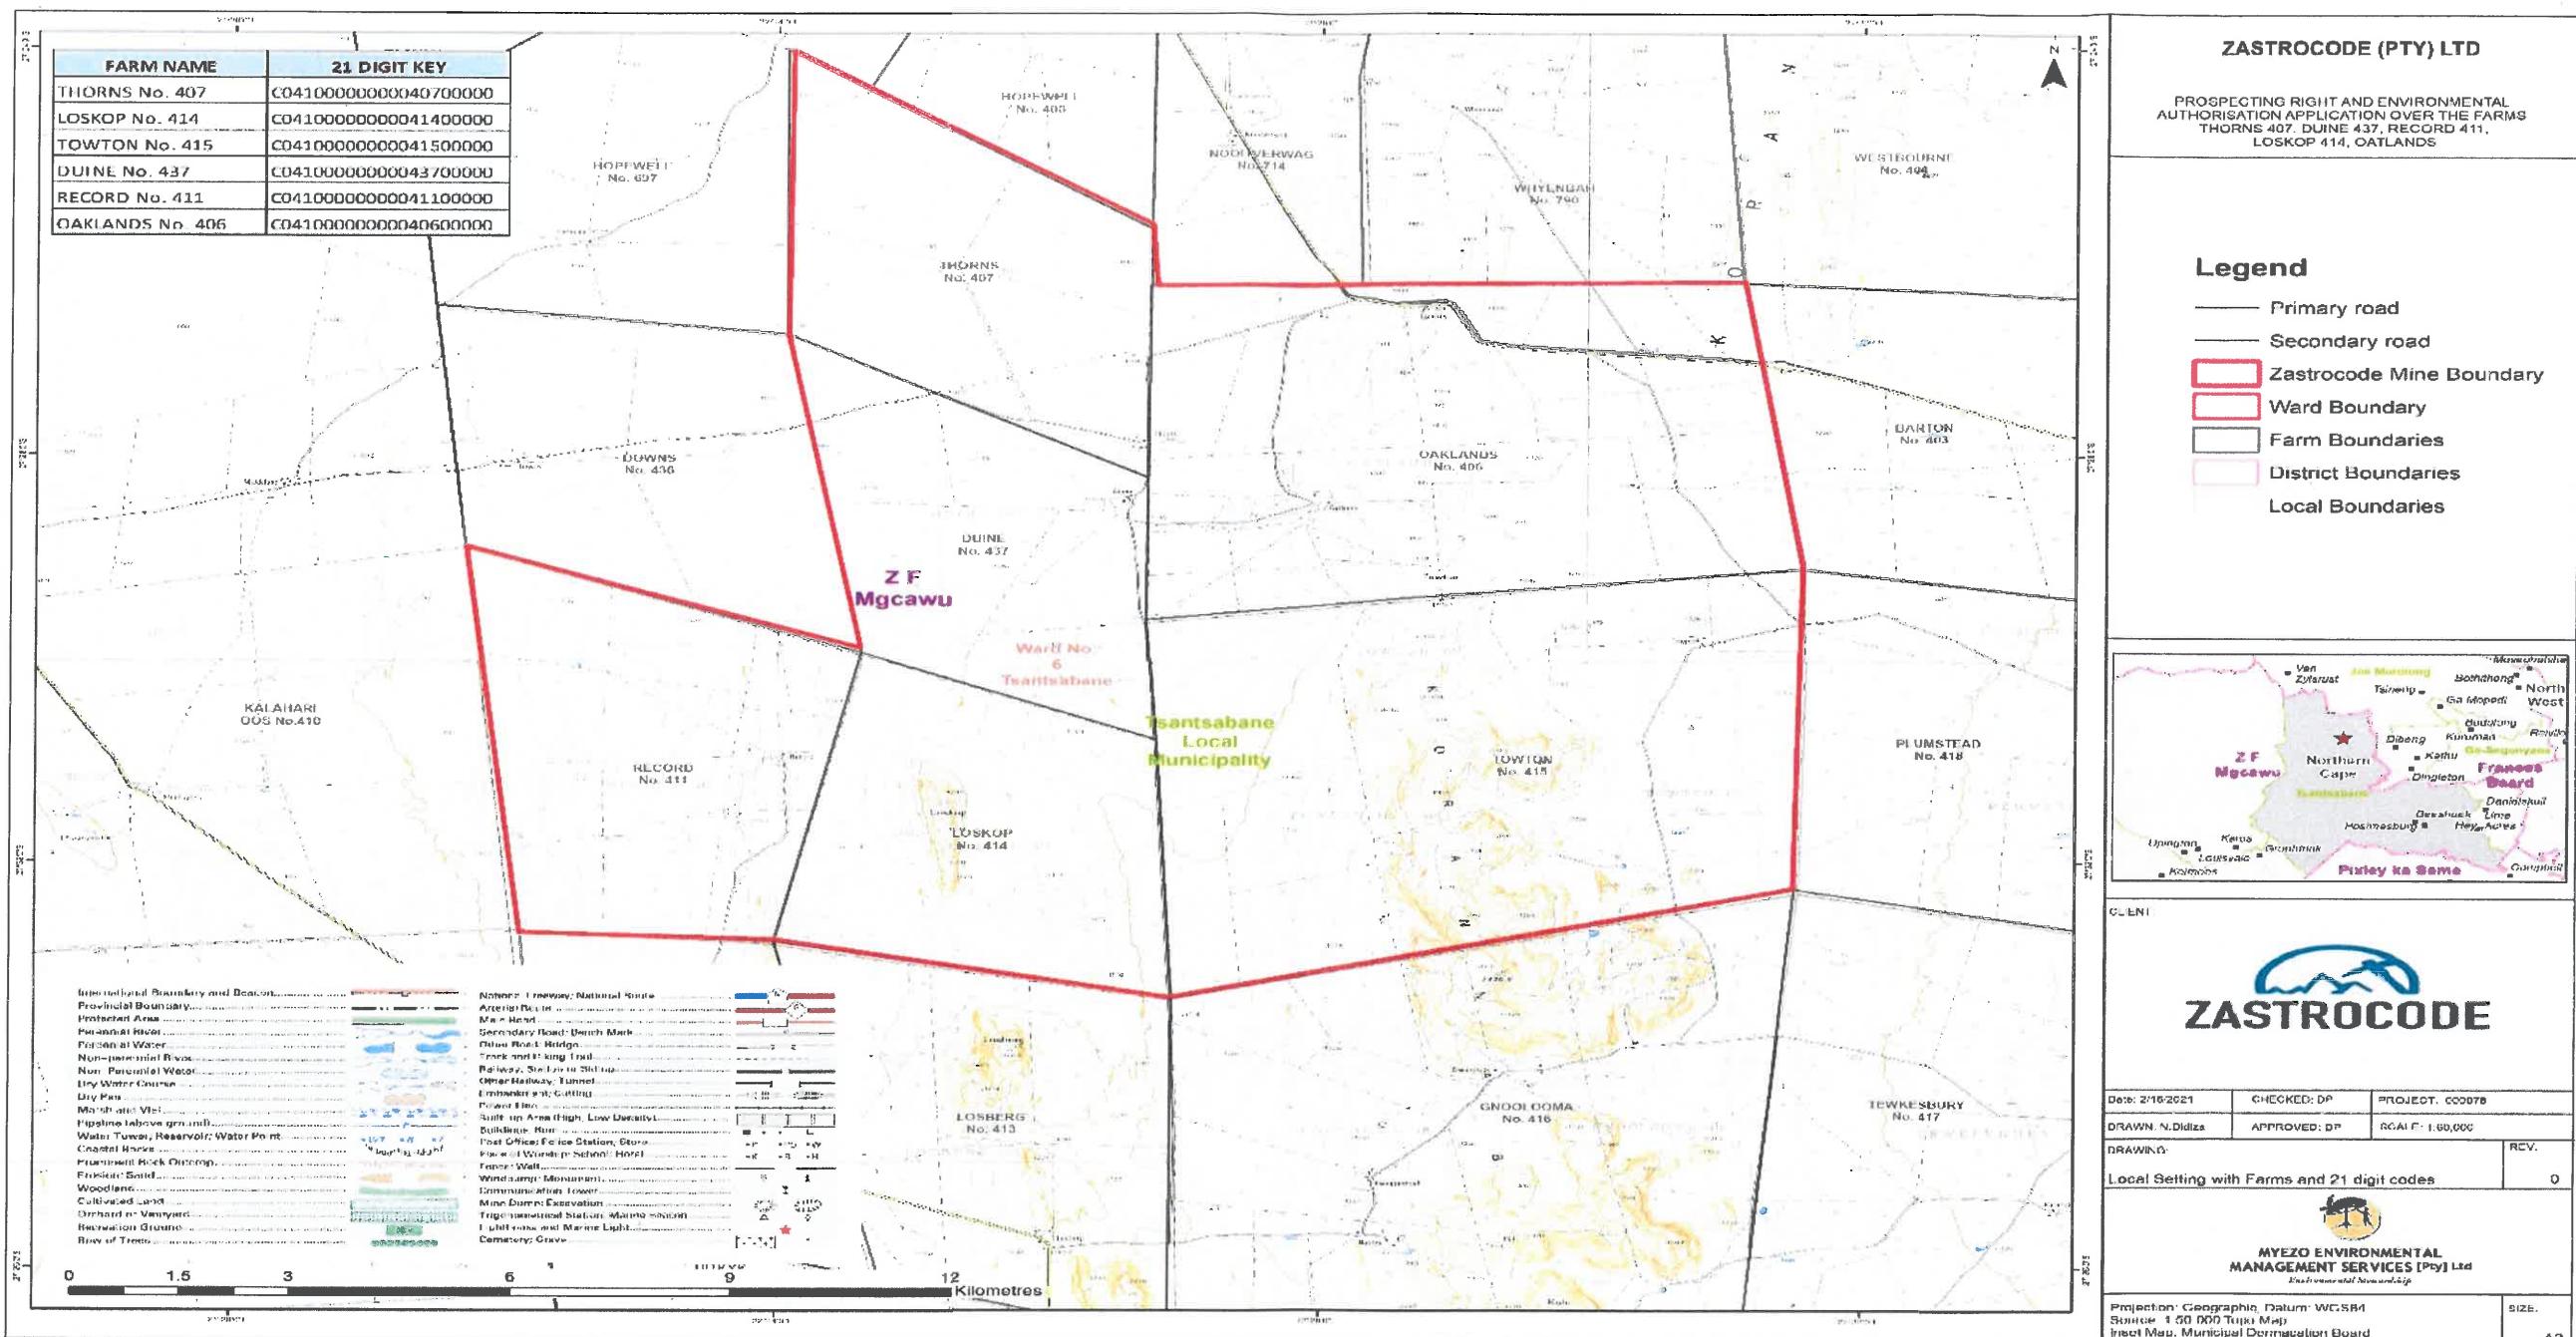

Figure v1b1-2: Current Land Use Map

v) **Impacts and risks identified including the nature, significance, consequence, extent, duration and probability of the impacts, including the degree to which these impacts.**

(Provide a list of the potential impacts identified of the activities described in the initial site layout that will be undertaken, as informed by both the typical known impacts of such activities, and as informed by the consultations with affected parties together with the significance, probability, and duration of the impacts. Please indicate the extent to which they can be reversed, the extent to which they may cause irreplaceable loss of resources, and can be avoided, managed or mitigated).

Potential impacts are presented in Table j1-1.

vi) **Methodology used in determining and ranking the nature, significance, consequences, extent, duration and probability of potential environmental impacts and risks;**

(Describe how the significance, probability, and duration of the aforesaid identified impacts that were identified through the consultation process was determined in order to decide the extent to which the initial site layout needs revision).

The methodology given below was used to rank the impacts.

In order to identify and assess impacts, a site surveillance was undertaken to support desktop studies, specialist studies, Geographic Systems Information and through the use of tools and standards provided by NEMA, IFC and UNEP.

Nature of Impact – describes the impact. It shows how the impacts arise. For example “emissions by machinery” describes the production of air pollutants from vehicles that use fossil fuels.

Magnitude – describes the level to which the impact’s effects affect the environment. It is the severity of the impact rated as minimal, moderate, severe or extremely severe. In this case, minimal magnitude means that level of catastrophic effects is low whilst severe magnitude means that the level of adverse effects is high.

Extent – this is the geographical radius, size or range of the impact’s influence described as localised or widespread. For example, air pollution is widespread as the contaminants are carried by air across large areas whilst vegetation clearing is limited to one site which is described as localised.

Probability – describes the chances or likelihood of an event occurring (in this case the impact). It is described as unlikely, likely or highly likely. Impacts such as soil erosion where there is no vegetation clearing are unlikely whilst they are highly likely where vegetation is cleared.

Duration – this is the period during which the impact continues to have a harmful effect on the environment or local communities. The impact is rated as short-term, medium-term or

long-term. Some impacts such as noise can have a duration of one day whilst some such as spillage of chemicals into water last until the chemical is biodegraded.

Significance – describes the importance of the impact depending on the consequences and secondary effects arising. The significance rating gives an indication of the potential of impacting on the environment and hence the need to focus a certain level of attention there to reduce the impacts. Significance rating is explained below: Rated as insignificant, significant or highly significant.

Reversibility – describes the degree to which the impact can be restored to its original or preferred state. It is rated as reversible or irreversible. Impacts such as vegetation clearing can be reversed whilst those such as loss of human life are irreversible.

METHODOLOGY FOR RATING AND DETERMINING IMPACTS

IMPACT STATUS

Positive –impacts that are beneficial to the environment or community or economy

Negative–these are impacts that are detrimental to the environment, community or economy

SEVERITY

How severe does the aspects impact on the resource quality i.e. flow regime, water quality, geomorphology, biota, habitat?

Scale	Positive/Beneficial	Negative/Detrimental
1	Insignificant	Non-harmful
2	Slightly significant	Potentially harmful
3	Significant	Slightly harmful
4	Very significant	Harmful
5	Extremely beneficial	Extremely harmful

IMPACT PROBABILITY

Probable – impact or benefit is most likely to occur

Improbable – impact or benefit is most unlikely to occur

Definite – impact or benefit will occur

REVERSIBILITY

Reversible – benefits are for a short time and will eventually return to initial state. Negative impacts are short lived and affected aspects can be restored back to original state.

Irreversible - defines impacts that are permanent and cannot be restored back to original state.

SPATIAL SCALE

Defines how big the area that the aspect is impacting on?

Scale	Description
1	Restricted to a portion of project site
2	Entire project site

3	Within village and surrounding communities
4	Impacting beyond provinces
5	Transboundary

DURATION

Rates how long the impact or benefits lasts

Scale	Description
1	One month to a year
2	One year to five years
3	Five to ten years
4	Ten to thirty years
5	Permanent or over 30 years

Calculations:

Consequence = Severity + Spatial Scale + Duration

Significance|Risk = Consequence x Likelihood

Likelihood/Probability of occurrence = Frequency of Activity + Frequency of Incident

Once the significance of an impact has been determined, the CONFIDENCE in the assessment of the significance rating is ascertained using the rating systems outlined below.

DEFINITION OF CONFIDENCE RATINGS

CONFIDENCE RATINGS*	CRITERIA
High	Wealth of information on and sound understanding of the environmental factors potentially influencing the impact. Greater than 70% sure of impact prediction
Medium	Reasonable amount of useful information on and relatively sound understanding of the environmental factors potentially influencing the impact. Between 35% and 70% sure of impact prediction.
Low	Limited useful information on and understanding of the environmental factors potentially influencing this impact. Less than 35% sure of impact prediction.

The level of confidence in the prediction is based on specialist knowledge of that particular field and the reliability of data used to make the prediction.

FREQUENCY OF THE ACTIVITY		
How often do you do the specific activity?		
Annually or less	1	
6-monthly	2	
Monthly	3	
Weekly	4	

Daily	5	
FREQUENCY OF THE INCIDENT/IMPACT		
How often does the activity impact on the resource quality?		
Almost never / almost impossible / >20%	1	
Very seldom / highly unlikely / >40%	2	
Infrequent / unlikely / seldom / >60%	3	
Often / regularly / likely / possible / >80%	4	
Daily / highly likely / definitely / >100%	5	
Remote and difficult to observe	4	
Covered	5	

DEFINITION OF LOSS OF RESOURCES

LOSS OF RESOURCES	CRITERIA
Low	Where the activity results in a loss of a particular resource but where the natural, cultural and social functions and processes are not affected.
Medium	Where the loss of a resource occurs, but natural, cultural and social functions and processes continue, albeit in a modified way.
High	Where the activity results in an irreplaceable loss of a resource.

The degree to which the impact can be mitigated or enhanced is shown below

DEGREE TO WHICH IMPACT CAN BE MITIGATED

DEGREE TO WHICH IMPACT CAN BE MITIGATED	CRITERIA
None	No change in impact after mitigation.
Very Low	Where the significance rating stays the same, but where mitigation will reduce the intensity of the impact.
Low	Where the significance rating drops by one level, after mitigation.
Medium	Where the significance rating drops by two to three levels, after mitigation.
High	Where the significance rating drops by more than three levels, after mitigation.

SIGNIFICANCE RATING

RATING	CLASS	MANAGEMENT DESCRIPTION
1 – 55	(L) Low	Acceptable as is or consider requirement for mitigation. Impact to easily mitigated.

56 – 169	M) Moderate Risk	Risk and impact are notably and require mitigation measures on a higher level, which costs more and require specialist input.
170 – 300	(H) High Risk	Impacts by the activity are such that they impose a long-term threat on a large scale. Mitigation measure will have to be more stringent and require dedicated monitoring and enforcement.

vii) The positive and negative impacts that the proposed activity

(in terms of the initial site layout) and alternatives will have on the environment and the community that may be affected.

(Provide a discussion in terms of advantages and disadvantages of the initial site layout compared to alternative layout options to accommodate concerns raised by affected parties).

Notification of I&APs will be undertaken at the beginning of the public review, which commenced on 19 April 2021. I&APs were awarded an opportunity to submit environmental concerns during this period and these were documented and addressed in this Final BAR submitted to the competent authority.

Impacts are divided into environmental and socio-economic.

Environmental impacts

The proposed activity will result in the following impacts.

Positive impacts

- Rehabilitation of existing erosion;
- Use environmentally friendly drill technologies and drill fluids; and
- Possibility of finding iron ore and manganese reserves.

Negative impacts

- Vegetation loss
- Soil erosion can result from vegetation clearing;
- Dust can be produced during clearing of land for establishment of camp site;
- Drainage Surface disturbance can occur during drilling;
- Noise and vibrations produced by drill rigs can be a nuisance;
- Undiscovered artefacts can be unintentionally disturbed by drilling activities;
- Photo-pollution can occur when drill rigs operate at night;
- Water wastage during drilling;
- Ground water contamination by ablution waste;
- Fuel and oil storage present a veld fire hazard;

- Sewage and general waste present a health hazard;
- Occupational injuries can result from the operations of a drill rig;
- Water and soil contamination can occur due to spill of fuel and lubricants;
- Dust production during drilling is a health hazard to workers and community;
- Emissions by drill rigs contribute to global warming;
- Disturbance of community privacy;
- Water and soil contamination from used oil; and
- Siltation can occur if water sumps are not rehabilitated properly.

Socio-economic impacts

The proposed activity will have socio-economic impacts to the surrounding areas due to activities which might trigger change to the environment. These can be positive or negative effects.

Positive impacts

The project is its generous contribution to local, provincial and national economies. The following positive impacts will emanate from the project:

- Mining industry is among the major economic contributors in the area and this will be manifested through tax revenues remitted to local, provincial and national governments.
- The project will create new direct jobs for skilled and unskilled workforce as well as an indirect job from suppliers and businesses from which services will be sourced from resulting in an improved standard of living to the residents in the area and alleviation of poverty.
- Support will be given to Small, Medium and Micro Enterprises (SMMEs) where procurement of services will prioritise this group.
- The project will trigger migration and this will in turn provoke an increase in the demand of goods and services thus promoting growth of the available businesses and economic growth in the area.
- The developer will commit to community projects through the municipalities' Local Economic Development department, thus contributing to service delivery.
- The Tsantsabane Local municipality is facing a decline in economic growth, the operation of the mine will contribute to regional economic development thereby positively contributing to the provincial economy.

Negative impacts

The following negative will emanate from the project:

- During the operation of the project, there will be increased transportation activities and this can causes disturbances to people residing in the area, those who work

around and even the animals which are in the poultry farming. Thus, this needs to be mitigated.

- The operations at the mine might result in increased noise levels, therefore mitigation measures to manage noise pollution should be put in place.
- Congestion might also result from activities both during construction and operational phase.
- The project will trigger migration of people and employment of immigrants might cause tension between local people and the migrants people. To mitigate this, local people must be given preference when it comes to hiring short term labour. Air pollution from iron ore and manganese dust which might cause adverse health effects may result from the project, thus management measures should be developed.
- The influx of migrants might also increase the occurrence of crimes in the area. Measures need to be put in place to avoid an increase in crime ad tensions between local people and migrants.
- The development might trigger migration and as people concentrate in the area, this might increase the prevalence of communicable diseases such as HIV and TB, thus there is need to undertake health awareness campaigns.

viii) The possible mitigation measures that could be applied and the level of risk.

(With regard to the issues and concerns raised by affected parties provide a list of the issues raised and an assessment/ discussion of the mitigations or site layout alternatives available to accommodate or address their concerns, together with an assessment of the impacts or risks associated with the mitigation or alternatives considered).

Notification of I&APs will be undertaken at the beginning of the public review, which commeced on 19 April 2021. I&APs were awarded an opportunity to submit environmental concerns during this period and these were documented and addreesed in this Final BAR submitted to the competent authority.

ix) Motivation where no alternative sites were considered.

There were no alternatives considered for the project site due to the limitations concerning land and areas available for mining as well as the occurrence of manganese ore and iron ore deposits. Given the extensive and already existing geological mapping and surveys that have been carried out by the Geological Society of South Africa, the project has no site alternatives as there are already maps to available to select suitable areas for exploration.

x) Statement motivating the alternative development location within the overall site.

(Provide a statement motivating the final site layout that is proposed)

The whole of the project site will be used for exploration. However, sites to be drilled will depend with the outcome of the non-invasive exploration methods.

- i) Full description of the process undertaken to identify, assess and rank the impacts and risks the activity will impose on the preferred site

(In respect of the final site layout plan) through the life of the activity. (Including (i) a description of all environmental issues and risks that were identified during the environmental impact assessment process and (ii) an assessment of the significance of each issue and risk and an indication of the extent to which the issue and risk could be avoided or addressed by the adoption of mitigation measures).

Full description of how processes to be undertaken in the identification, assessment and ranking of impacts is detailed in Section vi. Also, identified potentially significant impacts are presented on Table j.

j) **Assessment of each identified potentially significant impact and risk**

(This section of the report must consider all the known typical impacts of each of the activities (including those that could or should have been identified by knowledgeable persons) and not only those that were raised by registered interested and affected parties).

Table j1-1: Potentially Significant Impacts and Risks

NAME OF ACTIVITY		POTENTIAL IMPACT Including the potential impacts for cumulative impacts		Aspects Affected		Impact Probability <i>Activity Frequency + Impact Frequency</i>		Reversibility		Spatial Scale + Duration		Significance <i>Consequence x Probability</i>		Cumulative Impacts		Mitigation Type Modify, remedy, control, or stop through		Significance If mitigated	
Selection of exploration technology	Selected exploration technologies (i.e., RC drilling & RAB) will have minimal and manageable impacts on the environmental.	Land, Soil, Water and Air	1 + 5 = 6	Irreversible	5	Very beneficial as this is the core of the proposed project	1 + 2 = 3	8 x 6 = 48	There is another iron ore mine close to the proposed project site. If proactive approaches such as selecting the correct technology are not taken, there may be large cumulative effects for negative	Modification through the use of alternatives has been done. Selected alternatives such as RC drilling have less impacts on soil and ground water.	8 x 6 = 48								
<i>Impact Status:</i>																			

Significance <i>If mitigated</i>		Mitigation Type Modify, remedy, control, or stop through		
	Cumulative Impacts		Impacts such as noise and erosion.	
Significance <i>Consequence x Probability</i>			There are likely to be no cumulative impacts on the biodiversity.	Access roads will avoid sensitive areas. An environmental specialist will be involved in the selection of an access road. $8 \times 3 = 24$
Spatial Scale + Duration			$10 \times 9 = 90$	
Severity		5 Very severe	$3 + 1 = 5$	
Reversibility		Reversible	$3 + 1 = 4$	There are existing unpaved access roads being used by the community. The presence of a nearby mining activities to the east can result in a medium cumulative effect of damage to public infrastructure and
Impact Probability <i>Activity Frequency + Impact Frequency</i>		Biodiversity , water, soil	$1 + 4 = 5$	The local community and local municipality must be informed of the project before any work is done. They must also be involved in the planning, selection and construction of the access road. $5 \times 4 = 20$
Aspects Affected				
POTENTIAL IMPACT Including the potential impacts for cumulative impacts	Positive			
NAME OF ACTIVITY	Selection of routes for access roads	Access roads may disturb sensitive areas such as wildlife breeding grounds. <i>Impact status: negative</i>	Social and economic	Reversible at a cost of repairing or replacing Severe since this results in conflicts with the locals and this may not distort project support $8 \times 4 = 32$
		Since the proposed project area is close to communities, access roads may tamper with and damage existing infrastructure and community properties.

NAME OF ACTIVITY	

The supporting impact assessment conducted by the EAP must be attached as an appendix, marked **Appendix j1-1**.
Impact assessment attached as Appendix j1-1.

k) Summary of specialist reports.

(This summary must be completed if any specialist reports informed the impact assessment and final site layout process and must be in the following tabular form): Following environmental screening undertaken, using the DFFE screening tool, GIS and desktop surveys, it was discovered that specialist studies were not necessary for the project.

Table k1-1: Summary of Specialist Reports

LIST OF STUDIES UNDERTAKEN	RECOMMENDATIONS OF SPECIALIST REPORTS	SPECIALIST RECOMMENDATIONS THAT HAVE BEEN INCLUDED IN THE EIA REPORT (Mark with an X where applicable)	REFERENCE TO APPLICABLE SECTION OF REPORT WHERE SPECIALIST RECOMMENDATIONS HAVE BEEN INCLUDED.
		<input type="checkbox"/>	

<input type="checkbox"/>	<input type="checkbox"/>

Attach copies of Specialist Reports as Appendices. Upon conduction desktop screening, it was noted that no specialist studies were required for this project.

I) Environmental impact statement**(i) Summary of the key findings of the environmental impact assessment;**

Based on the baseline studies carried out and a comprehensive impact assessment, several impacts were noted for the iron ore and manganese project. The first activity will be the establishment of the drilling / camp site and the construction of access roads. This step will result in vegetation clearing which results in spread of alien invasive species, dust and soil erosion. Any identified alien invasive species will be cut and burnt. Eroded soil may be washed by rain water and impact watercourses. It was observed that there is existing erosion in the area and made a recommendation for erosion control mechanisms to be installed prior to starting invasive exploration activities.

Drill rigs will be operating during the exploration activities with water for cooling and fly rock being obtained from the local municipality and being stored in plastic-lined water sumps before being mixed with drill fluids and additives. It will be recycled to reduce water use. Rigs produce vibration and noise. This will be mitigated by operating during the day as well as bringing in well serviced machinery. Well serviced machinery produce less vibrations, noise and emissions. Additional devices can be fitted to the drill rigs and generators to reduce noise and greenhouse gas emissions. Biodegradable drill fluids and additives will be used to reduce the contamination of soil and ground water.

In spite of the many impacts that seem possible from the exploration activities, the actual project spatial footprint is very small and will be deliberately minimised to keep the significance and extent of negative impacts minimal. For example, the camp site will take up about 0.09 hectares and each drilling site will use 1 metre by metre of space. An ECO will also be on site to ensure that mitigation, minimisation and avoidance measures are effectively put in place. Should economically viable iron ore and manganese resources be discovered, the mining activities that follow will result in benefits such as local community development, economic growth, employment creation and availability of a market for local goods and services. At the end of this exploration project, the drill boreholes will be backfilled, access roads ripped and revegetated and all campsite equipment removed. The goal will be to rehabilitate the project site to its original state or better.

(ii) Final Site Map

Provide a map at an appropriate scale which superimposes the proposed overall activity and its associates structures and infrastructure on the environmental sensitivities of the preferred site indicating areas that should be avoided, including buffers.

The site layout maps for the proposed overall activity and its associated structures and infrastructure are attached as Appendix d1-1 and d1-2. There are no sensitive environmental features on site.

(iii) Summary of the positive and negative impacts and risks of the proposed activity and identified alternatives;

Below is a summary of the expected positive and negative impacts. The positive impacts are the benefits that are expected to be experienced from the project whilst the negative impacts are the detriments and damages that will result. There were no project site alternatives due to only that area having the required resource.

Table liii1-1: Summary of Impacts

Positive Impacts	Negative Impacts
Planning and setup phase	
Rehabilitation of existing erosion	Vegetation loss
	Soil erosion can result from vegetation clearing
	Dust can be produced during clearing of land for establishment of camp site
Exploration phase	
Use environmentally friendly drill technologies and drill fluids	Drainage Surface disturbance can occur during drilling
Possibility of finding iron ore and manganese reserves	Noise and vibrations produced by drill rigs can be a nuisance
	Undiscovered artefacts can be unintentionally disturbed by drilling activities.
	Photo-pollution can occur when drill rigs operate at night
	Water wastage during drilling
	Ground water contamination by ablution waste
	Fuel and oil storage present a veld fire hazard
	Sewage and general waste present a health hazard
	Occupational injuries can result from the operations of a drill rig
	Water and soil contamination can occur due to spill of fuel and lubricants
	Dust production during drilling is a health hazard to workers and community
	Emissions by drill rigs contribute to global warming
	Surface water contamination can occur due to spill of drill fluid or effluent water
	Disturbance of community privacy

Rehabilitation	
Rehabilitation of existing erosion	Soil erosion
	Water and soil contamination from used oil
	Siltation can occur if water sumps are not rehabilitated properly.

m) Proposed impact management objectives and the impact management outcomes for inclusion in the EMPr;

Based on the assessment and where applicable the recommendations from specialist reports, the recording of proposed impact management objectives, and the impact management outcomes for the development for inclusion in the EMPr as well as for inclusion as conditions of authorisation.

The main objectives of impact management are outlined below:

- To ensure the availability of sufficient finances to attain the set environmental measures to be executed at the planning stage and during implementation of the EMP report.
- To ensure maintenance of the biodiversity on site
- To ensure re-establishment and sustainability of vegetation in the rehabilitated land, and thereby avoiding loss of any species habitat
- To Ensure that the rehabilitated land is in the state that is suitable for its agreed upon post-closure uses
- To develop good remediation methods and proper closure plans, so as to minimize degradation of the environment
- Rehabilitate disturbed land and drill deposits to a state that:
 - facilitates compliance with applicable environmental quality objectives (air quality and water quality guidelines);
 - reduces visual impact of the disturbed land;
 - limits post closure management.
- To ensure that the infrastructure is safe after rehabilitation
- To keep relevant authorities informed of the progress of the decommissioning phase.
- Submit monitoring data to the relevant authorities as required.
- Maintain required pollution control facilities and rehabilitated land until closure

(1) General Management Objectives

- To assign time frames for achieving those set objectives.
- To have a system of ensuring that environmental requirements are updated as modifications occur in activities and structures.
- To ensure that responsible parties to be involved in environmental management planning process have set time frames, and these are agreed with the environmental impact generating divisions
- Environmental Management System (EMS) to include designation of responsibility for achieving objectives at each function
- Targets to be developed in line with EMPr commitments and acceptable standards for:
 - Solid, liquid waste and gaseous emissions
 - Waste reduction, reuse and recycling
 - Rehabilitation KPAs
 - Biodiversity management
 - Eco-efficiency such as electricity consumption

(2) Emergency preparedness and Response objectives

Zastrocde's environmental emergency procedures will ensure appropriate responses to unexpected / accidental actions/incidents that could cause environmental impacts. Such incidents may include:

- Accidental discharges to water (i.e. into the watercourse) and land;
- Accidental spillage of hazardous substances (typically oil, petrol, and diesel);
- Accidental toxic emissions into the air; and
- Specific environmental and ecosystem effects from accidental releases or incidents.

It is intended that all environmental emergency situations are identified and are linked to the identified significant risks, made known to employees and surrounding communities that proper response action are in place and are communicated to those who might encounter such emergency situations.

(3) Biodiversity objectives

Vegetation

- To ensure long-term survival of the ecosystem where the mining activity will be conducted
- To prevent loss of vegetation due to unnecessary clearing during construction activities.
- To limit and prevent the establishment of invasive and/or alien vegetation.
- To limit the impact on the flora within the stipulated footprints of the infrastructural areas.

Animals

- To prevent loss of biodiversity.
- To limit the impact on the fauna in the area of the mine complex and related infrastructure sites over which the applicant has control.
- To prevent the incidents of snaring, poaching and accidental killings of wildlife and livestock within the area over which the applicant has control.

(4) Soils, land capability and land use objectives***Soils***

- To preserve as much soil as possible from areas to be disturbed to ensure that the maximum amount of soil is available for future use during rehabilitation.
- To preserve soil horizons and group similar soil units together in stockpiles.
- To encourage re-growth and biological activity within the soils, while they are stockpiled.
- To maintain the fertility of the soils so as to ensure good re-vegetation of the rehabilitated areas.
- Prevent soil loss through wind and water erosion.
- Prevent reduction of soil quality through contamination
- To encourage re-growth and biological activity within the soils, while they are stockpiled.
- To ensure the correct rehabilitation of contaminated soils.
- To ensure the correct placement, sequence and depths of soils during rehabilitation.
- To encourage re-growth and biological activity within the replaced soils and to minimise the loss of soil.

Land capability

- To minimise the area to be disturbed during construction and operational activities.
- To manage and rehabilitate the disturbed areas to an appropriate level.
- To minimise soil erosion.

Land use

- To limit the impact of the mining operations to as small a footprint as is possible.
- To manage and rehabilitate the disturbed areas to an appropriate level.

(5) Cultural Heritage

- To ensure the preservation of identified sites of cultural importance (such as graves, should there be any of such encounters)
- To ensure that any necessary, destruction of identified cultural sites that fall within the mine foot print is done in accordance with the NHRA and under the guidance of SAHRA.

(6) Contamination control – cleanup of machine fluid spills

To ensure that:

- Ensure that polluted soil is removed from the spillage site to an approved treatment site where it will be rehabilitated.

(7) Waste management

Solid Waste

- Records of waste produced and volumes disposed of will be kept
- Targets for waste reduction at source will be determined and thus waste production targets will be set for each month
- Recyclable waste should be recycled at an appropriate recycling facility.
- A temporary transfer station or collection point will be demarcated and fenced off
- Skip bins will be provided for collection of domestic waste from various sources around the mine

Sewage Effluent

- Portable toilets will be used for the project. These will be transported and disposed of in approved treatment and disposal sites by a registered service provider.

Hazardous Waste

- All hazardous waste should be collected on site at a temporary storage facility
- Streams of hazardous substances stored on site should be recorded and Materials Safety Data Sheets kept for all of these. The hazardous substances waste streams (type of waste, volumes, where generated, current disposal strategy) should form part of the overall waste register for the mine. Ensure that safety disposal certificates are obtained from the supplier.
- Materials safety data sheets will be kept for all materials stored on site and shall be displayed at the stores and well as at points of use.
- The hazardous waste should be collected by a registered hazardous waste carrier and disposed of at a registered H:H site. A certificate for the safe disposal of hazardous waste will be supplied to the mine.

(8) Surface water management (Natural resource use and eco-efficiency)

- To reduce the area of the catchment not contributing to runoff to minimise the impact on the catchment yield.
- To keep clean and dirty water separate.
- To minimise water consumption from external sources and recycle as much water as possible.
- To prevent contamination of the watercourses.
- To ensure compliance with all legal obligations.
- All plant and surface infrastructure (including the TSF and Overburden dumps) to be designed and constructed according to national standards and applicable legislative requirements, to prevent surface water contamination.
- To maximise the re-use of water during the operational phase in order to minimise the use of clean water. To recycle water from points such as return water dams to avoid water wastage
- To minimise the risk of polluted water leaving each site and to prevent the contamination of local watercourses.
- To ensure that water in sumps is recycled and not contaminated
- To keep clean and dirty water separate.
- At closure, to ensure that the existing surface water flow is returned to as close as is possible to the original flows through contouring of the site during rehabilitation.

(9) Ground water

- To minimize impacts on the volume of ground water available for use.
- To prevent pollution of groundwater.
- To minimize the impact of dewatering along preferential pathways.
- To gather sufficient information to allow future interpretations and to guide planning for closure.

(10) Visual

- To limit the perception of visual intrusion of the mining activities, where reasonably possible.

n) Aspects for inclusion as conditions of Authorisation.

(Any aspects which must be made conditions of the Environmental Authorisation)

EAP (2021)

- Proponent must commit to follow and implement recommended mitigation measures outlined in the EMPr. However, the ECO can substitute or improve on the measures for best results and intended outcomes.

- The proponent must produce evidence of consulting and cooperating with landowners / occupiers in the vicinity of the project site.
- There must be a qualified ECO at the site for the duration of the project.
- Proponent must put in place erosion control mechanisms before starting drilling activities.

o) Description of any assumptions, uncertainties and gaps in knowledge.

(Which relate to the assessment and mitigation measures proposed)

The description of assumptions is given for the studies that were undertaken for this project which are the Basic Assessment Process.

1. Basic Assessment Process

The assessment was based on the assumption that all the information gathered in during desktop studies is correct and gathered professionally. Using all information gathered during desktop studies, enough evidence is available to predict possible impacts and avert them. It must also be noted that in the process of converting spatial data to final output drawings, several steps were followed and these may affected the accuracy of delineated areas even though due diligence was done to preserve accuracy.

Filed survey was conducted during the early summer season and is was a daytime survey only. Most of the different habitats at the site were investigated and it was therefore possible to complete a rapid survey and obtain information on the habitats that are present and the site, or that are likely to occur there. Access to portions of the nature reserve were not possible.

No assumptions should be made unless opinions are specifically indicated and provided.

Data presented in this BAR may not explain all possible conditions that may exist given the limited nature of the enquiry.

p) Reasoned opinion as to whether the proposed activity should or should not be authorised

i) Reasons why the activity should be authorized or not.

Taking into account Zastrocde's commitment towards environmental management and their effort to follow the laws that preserve the environment, it is the EAP's opinion that the activity must be authorised.

ii) Conditions that must be included in the authorisation

The activity must be authorised on condition that the applicant puts in writing, their commitment to follow measures recommended in the Environmental Management Programme. Proof of free and informed consent by the affected landowner must be provided before authorisation is granted.

q) Period for which the Environmental Authorisation is required.

The exploration is expected to take 6 months but an authorisation for 12 months is requested in order to make allowance for any unforeseen circumstances that may delay the expected time.

r) Undertaking:

Confirm that the undertaking required to meet the requirements of this section is provided at the end of the EMPr and is applicable to both the Basic Assessment Report and the Environmental Management Programme Report.

The EAP makes a confirmation that the undertaking required to meet the requirements of this section is provided at the end of the EMPr and is applicable for both the Basic Assessment Report and Environmental Management Programme.

s) Financial Provision:

State the amount that is required to both manage and rehabilitate the environment in respect of rehabilitation.

A total amount of R 140 921.00 will be needed as indicated on the illustration below.

i) Explain how the aforesaid amount was derived.

A project costing sheet was developed. All tasks or activities to be undertaken resources as well needed were captured and an estimate for each of task or resource was done. Contingencies and taxes were then added and the project total was generated.

ii) Confirm that this amount can be provided for from operating expenditure. (Confirm that the amount, is anticipated to be an operating cost and is provided for as such in the Mining work programme, Financial and Technical Competence Report or Prospecting Work Programme as the case may be).

A confirmation is made that the amount will be an operating cost and is provided in the Mining Work Programme and Prospecting Work Programme.

t) Specific Information required by the competent Authority

i) Compliance with the provisions of Sections 24(4) (a) and (b) read with Section 24 (3) (a) and (7) of the National Environmental Management Act (Act 107 of 1998). the EIA report must include the:-

(1) Impact on the socio-economic conditions of any directly affected person.
(Provide the results of investigation, assessment, and evaluation of the impact of the mining, bulk sampling or alluvial diamond prospecting on any directly affected person including the landowner, lawful occupier, or, where applicable, potential beneficiaries of any land restitution claim, attach the investigation report as an Appendix)

BUDGETED QUANTUM OF FINANCIAL GUARANTEE REQUIRED				
No.		Unit m³/m²/hr	Quantity	Rate Rands

Figure:s1-1: Financial Provision

A social and economic assessment on the impact of the mining activities on directly affected persons was undertaken. Impacts are listed on Section vii. A socio-economic report is attached as Appendix ti1-1.

- (2) Impact on any national estate referred to in Section 3(2) of the NHRA.**
(Provide the results of Investigation, assessment, and evaluation of the impact of the mining, bulk sampling or alluvial diamond prospecting on any national

estate referred to in Section 3(2) of the NHRA with the exception of the national estate contemplated in Section 3(2)(i)(vi) and (vii) of that Act, attach the investigation report as Appendix 2.19.2 and confirm that the applicable mitigation is reflected in 2.5.3; 2.11.6.and 2.12.herein).

The investigations undertaken shows that there are significant no heritage and or national estates to be impacted by the proposed activities. As such, no evaluation of impcats was done.

u) Other matters required in terms of Sections 24(4) (a) and (b) of the Act.

(the EAP managing the application must provide the competent authority with detailed, written proof of an investigation as required by Section 24(4)(b)(i) of the Act and motivation if no reasonable or feasible alternatives, as contemplated in sub-regulation 22(2)(h), exist. The EAP must attach such motivation as an **Appendix**).

There are no alternatives to this project and a motication is attached as Appendix u1-1.
