Heritage Impact Assessment of the Proposed Amatikulu 132kV Switching Station and Associated 132kV Powerlines, KwaZulu-Natal

The survey by Frans Prins of Active Heritage resulted in the identification of three Iron Age sites with a scatter of potsherds. These sites are rated to be of medium significance and are generally protected in terms of the heritage legislation. Such sites require a permit if any disturbance or damage is envisaged.

Amafa Heritage KZN raises no objection to this application subject to the following conditions:

- A final walkdown, by a heritage expert, of the final tower placements, access roads and camp sites is required to avoid inadvertent damage to the sites.
- The heritage sites should be recorded and demarcated before commencement of site clearance and construction activities. The archaeological sites can only be subjected to destruction after a destruction permit has been issued by Amafa.

You are also required to adhere to the below-mentioned standard conditions:

Conditions:

1. Amafa should be contacted if any heritage objects are identified during earthmoving activities and all development should cease until further notice.
2. No structures older than sixty years or parts thereof are allowed to be demolished altered or extended without a permit from Amafa.
3. No activities are allowed within 50m of a site, which contains rock art.

Should you have any further queries, please contact the designated official using the case number quoted above in the case header.

Yours faithfully
