**Final Report on the Temporary Export Permit Hoogland Fossil Locality  
(SAHRA Permit: 80/12/05/006/52)**

Dr. Redelstorff,

Enclosed with this cover letter please a final report on the temporary export permit of fifteen (15) unidentified Hoogland fossil specimens from the Ditsong National Museum of Natural History initially approved in May 2012. I apologise for the delay in this report, which represents an oversight on my part because of the series of export permits and extensions related to the Hoogland locality which were obtained at this time. This permit is in fact linked with prior SAHRA permits 9/2/212/0001 and 80/12/05/005/52 which were reported on in September 2014. All fossil specimens covered by this export permit were in fact returned to the Plio-Pleistocene Section (Department of Vertebrates) of the Ditsong National Museum of Natural History prior to the expiration of the permit; a letter to that effect has been appended to this report.

Please feel free to contact me directly with any questions, comments, or concerns with this final report.

Sincerely,

A handwritten signature in black ink, appearing to read 'Justin Adams'.

Dr. Justin W. Adams  
Senior Lecturer  
Department of Anatomy and  
Developmental Biology  
Monash University  
Clayton, Victoria 3800 Australia

On 9 June 2009, Jason Hemingway (School of Anatomical Sciences, University of the Witwatersrand Medical School) was granted permission to excavate *ex situ* and *in situ* fossiliferous sediments from the Hoogland fossil locality (SAHRA Permit #08/08/04/008/51). The Hoogland fossil locality lies on Farm Vlakplaats 354 JR (Gauteng Province; 25°48'48.30"S, 28° 0'20.40"E) on the property formerly owned by the Hausleitner family near the Hennops River. The original justification for sampling fossil-bearing sediments from Hoogland came from the potential historical significance of the palaeocave. In 1936, Robert Broom explored fossil-bearing breccias from a formerly-mined cave system on the Hausleitner property near the Hennops River in the Schurveberg mountain region (Broom, 1936). Broom collected a series of fossil specimens from this site and other palaeocaves in the region, including the type specimen of *Papio (Dinopithecus) ingens* (SB 7), and a '*Felis whitei*' mandible (TM 856; now attributed to *Megantereon cultridens*; Turner, 1987) that comprise the 'Schurveberg collection' repositied at the Ditsong Museum, Pretoria. Broom appears to have not returned to the Hausleitner property after this initial phase of collection; likely because the discoveries made around that time at Sterkfontein and his subsequent involvement at the other Blauubank River Valley sites.

The Hoogland locality had been explored briefly by Dr. J. Francis Thackeray in the 1990s including collection of blocks repositied at the Ditsong National Museum of Natural History (DNMNH) but no fauna processing had occurred prior to this excavation permit. A series of collection seasons in 2008-2010 coordinated by Dr. Hemingway and myself allowed for geological sampling, block sampling from *ex situ* dumps, and *in situ* excavations. As per the excavation permit, all materials removed from the Hoogland locality under Dr. Hemingway's permit were to be processed and curated at the Plio-Pleistocene Section, Department of Vertebrates of the DNMNH. Processing at the Ditsong Museum acetic acid laboratory produced an initial sample of fauna from *ex situ* dumpsite deposits, representing the first assemblage from Hoogland. Data gathered from these fossil specimens (alongside the results of palaeomagnetic analysis) were published by our research team in 2010 (Adams et al., 2010).

As the primary faunal analyst working with Dr. Hemingway at the Hoogland locality I was tasked with undertaking all sorting, cataloging, primary identification, and palaeobiological interpretation of the non-primate specimens recovered from our collection and processing of Hoogland materials. This prompted the initial request to Ms. Stephany Potze (Ditsong Museum) in 2011 (and subsequent application to SAHRA) to allow for the exportation of Hoogland fossils to my institution (Department of Biomedical Sciences, Grand Valley State University, Michigan, USA).

The request was made (and supported by Ms. Potze) to both facilitate and expedite the identification of mammalian fossil specimens. The process of sorting, labeling, cataloging and identifying primary fossil specimens requires a significant investment of time and financial resources to accomplish. As a foreign scientist with both research and teaching duties beyond engaging in this primary level of sample generation and analysis, being limited to undertaking this process to a few weeks per year would mean that the Hoogland materials would likely never be fully addressed. The granting of the initial temporary export permit for these fossil specimens to the United States allowed me to undertake the sorting, cataloging and process of identification year-round, expediting this fundamental stage to developing data from the locality. Extensions were granted, in part because changes in institutions (from

Grand Valley State University to Monash University, Australia) forced a hiatus in analysis while moving countries and the international move required specimens to be re-permitted for entry into Australia.

Ultimately, the results of the temporary export permit can be summarized as follows:

- 1) The export permit has allowed for the size and scope of the Hoogland fossil assemblage to nearly triple in size from the original description of specimens offered in Adams et al. (2010); including the first documentation of specimens derived from *in situ* excavations conducted in 2009-2010. The original publication on the Hoogland *ex situ* faunas included all 4,327 specimens processed as of preparation of the manuscript in 2009 (Adams et al., 2010). This export permit allowed for the addition of 6,715 specimens to the Hoogland database. As a result, the current documented Hoogland fossil sample repositated at the Ditsong National Museum consists of 11,042 specimens, inclusive of all specimens processed from blocks collected under this SAHRA permit (80/12/05/006/52) and all associated SAHRA permits for excavation and exportation (e.g., 08/08/04/008/51, 9/2/212/0001 and 80/12/05/005/52).
- 2) All specimens exported under the permit have been sorted into standardized categories of unidentifiable (diaphysis, epiphysis, metaphysis) and identifiable; with the latter taken to element and/or lowest taxonomic level possible where appropriate. All specimens have been assigned catalog numbers (either individually or group numbers as appropriate). Each specimen has been measured (minimally to size category, maximally to biologically relevant postcranial or craniodental metrics), coded for taphonomic variables (pre-, peri- and postdepositional damage), and described within a searchable electronic database repositated with the Plio-Pleistocene Section, Ditsong National Museum of Natural History. This database includes all data gathered on each specimen, including block origin, which can be cross-referenced against preparation log sheets generated by the Ditsong Museum during processing and reference samples of each block taken prior to processing (retained by the Section). A hardcopy of this database is appended to this report; the electronic copy will be available to all researchers on submission of our final summative publication of the site which is currently in preparation.
- 3) Undertaking the primary sorting and identification phases through exportation has allowed research on the Hoogland fossils while in South Africa to focus on palaeobiological integration and interpretation of the remains. This means that not only has primary analysis been conducted on the larger sample, but also the secondary interpretation of the remains in reference to other contemporaneous assemblage. This has expedited the publication schedule for releasing a 'final' description of the fauna and taphonomy of the Hoogland fossil sample. Three publications on Hoogland are currently in preparation with Dr. Hemingway and colleagues covering: 1) Integrated geological, palaeomagnetic and isotopic study of the Hoogland palaeocave (in collaboration with Dr. Andrew I.R. Herries of La Trobe University, Melbourne, Australia); 2) Description of the final faunal listing from the site and integration with the general South African Plio-Pleistocene record; and 3) interpretation of the depositional history and taphonomy of the Hoogland site for understanding talus-mediated small mammal deposition (also in collaboration with Dr. A. I. R. Herries). Planned submission of these manuscripts is in early 2017.

**Confirmation of Return of Temporary Export Loan Material (SAHRA Permit: 80/12/05/006/52)**

Dr Redelstorff,

This letter is to confirm that Dr Justin W. Adams has returned all fossil materials from the Hoogland fossil locality exported under the above referenced SAHRA Temporary Export Permit to the Plio-Pleistocene Section collections of the Ditsong: National Museum of Natural History.

Please feel free to contact me with any questions regarding this matter.

Sincerely,

Dr Heidi Fourie
