**Final Report on the Temporary Export Permit Haasgat Fossil Locality
(SAHRA PermitID: 2140; CaseID: 6712)**

Dr. Redelstorff,

Enclosed with this cover letter please a final report on the temporary export permit of unidentified Haasgat fossil specimens from the Ditsong National Museum of Natural History initially approved in December 2015. This permit represents the analysis of fossil specimens collected under the jointly-held SAHRA permit for excavations at Haasgat (PermitID: 917; CaseID: 3597; Ref: 9/2/212/0020) and our prior excavation permit at Haasgat starting in 2010 (Permit 80/10/03/010/51). All fossil specimens covered by this export permit were returned to the Plio-Pleistocene Section (Department of Vertebrates) of the Ditsong National Museum of Natural History prior to the expiration of the permit (June 2016); a letter to that effect has been appended to this report. A reduced version of the searchable electronic catalogue of the Haasgat fossil specimens has also been appended as a demonstration of the outcomes of this export permit.

Please feel free to contact me directly with any questions, comments, or concerns with this final report.

Sincerely,

A handwritten signature in black ink, appearing to read 'Justin Adams'.

Dr. Justin W. Adams
Senior Lecturer
Department of Anatomy and
Developmental Biology
Monash University
Clayton, Victoria 3800 Australia

Background/General Summary of Progress Related to Haasgat Fossil Research

Palaeontological deposits in the Haasgat karstic system (25°51'31"S, 27°50'9"E, Farm Leeuwenkloof 480 JQ) were first noted in 1987, and led to initial geological description (Keyser and Martini, 1991) and faunal analysis (Figure 1; Keyser, 1991; McKee and Keyser, 1994; Plug and Keyser, 1994) of fossils processed from the extensive *ex situ* miner's rubble at the site. The cave system is positioned on the western slope of the north-south running Witwatersrandspruit river valley, on the southern edge of the Schurveberg mountain range (Keyser and Martini, 1991).

Since the discovery of Haasgat there have been two phases of palaeontological research conducted at the site. The first, as detailed in our prior final report to SAHRA on the locality, consisted of the sampling of *ex situ* dumpsites in the early 1990s (Keyser, 1991; Keyser and Martini, 1991). This sampling produced a sample of fauna that is curated at the Council for Geosciences (Silverton Facility) and was partially described in McKee and Keyser (1994), Plug and Keyser (1994), and McKee et al. (2011). The second phase of research is that we initiated in 2010 through our first successful permit application through SAHRA. We originally proposed three primary research objectives to initially address at Haasgat: 1) to assess and revise the Council for Geosciences HGD assemblage; 2) survey and map the Haasgat cave system, including geological sampling for dating; and 3) undertake sustainable sampling and processing of *ex situ* dumpsite breccias and the excavation of *in situ* fossil deposits.

Because the Haasgat HGD assemblage was only partially catalogued and described, and significant curatorial issues existed with the sample, redressing the HGD fossils was a significant focus of our 'offsite' research efforts under our first permitted phase of research at the Haasgat site (Adams, 2012; Kegley et al., 2011, in review; Adams et al., 2013). Although we ultimately addressed both survey and geological sampling of Haasgat (Herries et al., 2014) and undertook limited *ex situ* sediment sampling, the initial permitted period concentrated on establishing sufficient faunal and geological context to undertake *in situ* sampling of sediments within the cave system. These materials have been processed and repositated at the Ditsong National Museum of Natural History (DNMNH; Plio-Pleistocene Section) since sampling began in 2014.

Our team has continued to translate our Haasgat-focused research program into peer-reviewed publications. Since the onset of our renewed permit, we have continued to publish data on the Haasgat faunas and geology (Adams et al., 2013; Herries et al., 2014), submitted manuscripts (Kegley et al., in review) and presented data at both the 2015 and 2016 American Association of Physical Anthropology Meetings (Adams et al., 2015; Olah et al., 2015; Tallman et al., 2016). Data collected from these excavations, as well as through faunal analysis facilitated by this export permit, underlie two manuscripts currently in preparation for submission in 2016 on the newly recovered primate remains and the postcranial adaptations of the Haasgat primates and non-primate faunas. Continued support by both the Haasgat landowners and SAHRA is also allowing us to integrate graduate students into our research program, with two PhD candidates (Mr. Douglass Rovinsky/Ms. Georgia Zadow) at

Monash University currently applying to begin work on the site (both generally, and specific components) as part of their degrees.

Results of Export Permit Activities

As the primary faunal analyst working with my co-permit holder, Ms. Stephany Potze (until recently, collections manager of the Plio-Pleistocene Section at the D Hoogland locality I was tasked with undertaking all sorting, cataloging, primary identification, and palaeobiological interpretation of the fossil specimens recovered from our collection and processing of Haasgat materials (both *ex situ* and *in situ* derived). This prompted the initial request to SAHRA to allow for the exportation of Haasgat fossils to Monash University.

The request was made (and supported by Ms. Potze) to both facilitate and expedite the identification of mammalian fossil specimens. The process of sorting, labeling, cataloging and identifying primary fossil specimens requires a significant investment of time and financial resources to accomplish. As a foreign scientist with both research and teaching duties beyond engaging in this primary level of sample generation and analysis, being limited to undertaking this process to a few weeks per year would mean that the Haasgat materials would likely never be fully addressed.

Ultimately, the results of the temporary export permit can be summarized as follows:

- 1) The export permit has allowed for the first cataloguing of 2,870 *ex situ* and *in situ* specimens from the Haasgat fossil locality; more than doubling the number of catalogued fossil specimens recovered from the site (CGS Haasgat HGD assemblage n=2,413; Adams, 2012).
- 2) All specimens exported under the permit have been sorted into standardized categories of unidentifiable (diaphysis, epiphysis, metaphysis) and identifiable; with the latter taken to element and/or lowest taxonomic level possible where appropriate (see attached catalogue). All specimens have been assigned catalog numbers (either individually or group numbers as appropriate for indeterminate specimens from a unit of provenience). Each specimen has been measured (minimally to size category, maximally to biologically relevant postcranial or craniodental metrics), coded for taphonomic variables (pre-, peri- and postdepositional damage), and described within a searchable electronic database repositied with the Plio-Pleistocene Section, Ditsong National Museum of Natural History. This database includes all data gathered on each specimen, including block origin, which can be cross-referenced against preparation log sheets generated by the Ditsong Museum during processing and reference samples of each block taken prior to processing (retained by the Section). A hardcopy of this database is appended to this report; the electronic copy will be available to all researchers on submission of our final summative publications on the site (see below).
- 3) Undertaking the primary sorting and identification phases through exportation has allowed research on the Haasgat fossils while in South Africa to focus on palaeobiological integration and interpretation of the remains. This means that not only has primary analysis been conducted on the larger sample, but also the secondary interpretation of the remains in reference to other contemporaneous assemblage. This has expedited the publication schedule for releasing a 'final' description of the fauna and taphonomy of the Haasgat fossil sample; including the critical *in situ* fossils that

establish context for the large primate samples from the locality. Two publications on Haasgat are currently in preparation covering: 1) Integrated geological, palaeomagnetic and *in situ* fossil remains from the Haasgat palaeocaves following our initial presentation of results via Adams et al. (2015); 2) Palaeobiological analysis of the fossil primate postcrania following our initial presentation of results via Tallman et al. (2016).

Confirmation of Return of Temporary Export Loan Material (SAHRA Permit: 2140; CaselD: 6712)

Dr Redelstorff,

This letter is to confirm that Dr Justin W. Adams has returned all fossil materials from the Haasgat fossil locality exported under the above referenced SAHRA Temporary Export Permit to the Plio-Pleistocene Section collections of the Ditsong: National Museum of Natural History.

Please feel free to contact me with any questions regarding this matter.

Sincerely,

Dr Heidi Fourie
