Faculty of Science and Technology

Dear Ragna Redelstorff (SAHRA),

The sampling for this would take place in the UK, with the teeth being returned at the completion of my PhD in December 2018 at the latest. The isotopic analysis is planned for January 2017 at a specialist laboratory in London. The samples would be prepared for isotopic analysis under expert supervision or by an expert in the field, Philip Hopley (or team at Birkbeck University) to ensure minimal destruction to the tooth. It would be preferable for the samples to be air-couriered; however, if necessary in order to be in compliance with SAHRA regulations, a hand-carried option is possible.

Yours sincerely,

Lauren Sewell
