ADDENDUM 3

O

of Archaeologists) Biennial Conference, University of Venda, 10 July 1998 Report on Workshop on Standards for the Assessment of Significance and Research Priorities for Contract Archaeology, SA3 (Southern African Association

No archaeological or historical cultural remains were found on site. Construction processes may proceed. It is however important to adhere to the regulations as stipulated in the attached addenda.

The aim was to undertake a Phase 1 Archaeological Impact Assessment on approximately 0,4 ha at Erf 333, Akasia Extension 2, Taylor Street, Potgietersrus where rezoning has been proposed, to assess the impact of the proposed project in terms of archaeological/historical sites and features and to make recommendations. The task was performed on June 17, 1999.

A survey of the whole area demarcated for development was done on foot by an archaeologist

DESCRIPTION

debushed. were found The size of the site is approximately 0,4 ha. The entire area was reconnoitted but no other cultural remains, except for modern debris A service trench has already been dug and the area partly

No archaeological or historical cultural material were recovered

RECOMMENDATIONS

required In view of the above, it is recommended that a Phase 2 Archaeological Impact Assessment is not

It would however be important that the archaeologist be notified should any graves and/or middens be encountered during construction. Please refer to the attached Addenda.

make the best of the opportunities, medium-term (3-5 year) research and heritage conservation priorities Opportunities for archaeological contract work will expand in southern Africa in the next few years. national heritage agencies and research archaeologists. The following factors are relevant need to be established as a matter of urgency in consultation with CRM practitioners, provincial and

- In South Africa, the Department of Environmental Affairs and Tourism published on 5 September 1997 listed activities its long-awaited List of Activities which may have a substantial detrimental effect on the environment and the regulations regarding activities identified under Section 21(1) of the Environment Conservation Act (No. 73 of 1989). These effectively make environmental impact assessments compulsory for the
- N The National Heritage Bill, designed to replace the National Monuments Act in South Africa, came before the Cabinet and Parliament in 1998. It could become law from 1 April 1999. Amongst other innovations, it makes impact assessments compulsory where historical, archaeological and palaeontological sites are affected by development but are not protected by other legislation.
- Ç In neighbouring African countries, the tempo of contract work is also rising as new legislation and requirements of the World Bank are implemented

It seems widely accepted that CRM practitioners do mitigation to rescue the research potential of a site which would otherwise be lost. The following kinds of sites were identified as being worthy of mitigation:

Stone Age / Hunter Gatherer

- any open air site with bone or other organic material;
- any cave or rock shelter with deposit;
- rock paintings and rock engravings (record context as well as images);
- quarry sites with possibilities for core re-fitting;
- long sequence sites;
- coastal and inland shell middens;
- any sites with Howiesons Poort, Stillbay or Robberg artefacts;
- human remains or burials
- IISN IIQDS
- placement of Earlier Stone Age sites in the land-

- scape are they associated with river valleys, water sources or quarries?
- evidence for modernity in Middle Stone Age sites;
- sites with evidence for interaction between Stone Age and Iron Age or colonial people;
- Later Stone Age sites with Bambata pottery;
- pastoral sites, especially in the Eastern Cape
 caches of ostrich eggshells or other items;
- hunting blinds;
- evidence for exploitation of raw material sources such as haematite or specularite.

- Sites that will help to clarify the ceramic sequence of the Early Iron Age in the northern and eastern regions of southern Africa;
- any Bambata settlement.
- Early Iron Age sites with evidence for structures or long term occupation;
- sites with evidence for political or social hierarchies;
- evidence of the organization of metal production;
- burials with evidence for social differentiation health and nutrition;
- evidence for trade within and outside of the Zimbabwe culture area;
- sites in areas that are under-researched to build up the culture-historical sequence;
- special-purpose sites such as rainmaking, circumcision, mining, furnaces, cattle posts vs living sites, salt making;
- Blackburn and Moor Park sites in KwaZulu-Natal;
- well preserved early Moloko sites with middens for evidence of diet and subsistence or stone

- ₩alling:
- any Zimbabwe-style stone walling should be mapped in sufficient detail to estimate factors such as population size and grain-bin variability;
 evidence for contemporary cultural interaction,
- for example between Khami and Moloko;
 sites with architectural styles and information on
- siles with architectural styles and information on materials used for housing, even in the recent past;
- evidence for the introduction of maize, either direct or in the style of grindstones used;
- sites with botanical remains of cuttigens
- information on the distribution, size and characteristics of dolly-holes for gold mining;

evidence for textiles or weaving in addition to

- spindle whorls;
 evidence for games and contextual informa-
- evidence for gaines and contextual information relating to them;
 figurine caches and spatial relationships to
- check stone outcrops near stonewalled sites for engravings.

settlements;

Historical / Colonial

- sites connected with whaling and sealing.
- ships or ship/boat structures on land;
- shipwreck survivor camps;
- sites in the interior with nineteenth century ceramics (RESUNACT is preparing guidelines for identification);
- single occupation sites in urban environments with deposits such as wells, cisterns and depressions;
- 17th century or early 18th century sites in Cape Town;
- sites that are connected with national and international slave trade routes;
- LSA sites with metal items such as brass buttons;

- documentary and archival searches should be done before going into the field;
- sites that could inform on the effects of military forces on indigenous local populations;
- the symbolic significance of textiles, beads and other items imported by traders;
- oral histories increase significance and are therefore relevant to archaeology;
- historical graves need sensitive removal during mitigation and this is often best done in collaboration between archaeologists and funeral specialists.
