CTS HERITAGE

11/05/2023

Ms N. Higgitt

Manager: Development Applications Unit

South African Heritage Resources Agency

111 Harrington Street

Cape Town

Dear Ms Higgitt,

RE: 132 KV OVERHEAD POWERLINE AND SUBSTATION ASSOCIATED WITH THE KARREEBOSCH

WIND FARM, WESTERN AND NORTHERN CAPE

SAHRIS REF: 17397 and 19355

**Background** 

The proposed 132kV Karreebosch Overhead Powerlines Line (OHPL), 33/132kV on-site Substation

and associated infrastructure is located 35km north of Matjiesfontein, and extends across two

provinces, namely the Northern and Western Cape Provinces.

Karreebosch Wind Farm (RF) (Pty) Ltd (Karreebosch) received Environmental Authorisation (EA)

for its grid infrastructure corridor in December 2022 (EA Ref: 14/12/16/3/3/1/2608) and a split of

the EA in April 2023 (EA Ref: 14/12/16/3/3/1/2608/AM3/1). Conditions 12 and 13 of the Grid EA

specifically stated that the final layout and Environmental Management Programmes (EMPrs) are

not yet approved. The layout and specific tower positions will need to be micro sited and will

require a 30 day public participation process before the final layout and EMPrs can be submitted

to the Department of Forestry, Fisheries and Environment (DFFE) for approval. Karreebosch now

intends to proceed with obtaining approval of the final layout and EMPrs for the grid connection

infrastructure.

For the Karreebosch Wind Energy Facility (WEF) (EA Ref: 14/12/16/3/3/2/807/AM6) to evacuate

power to the national grid, Karreebosch propose to develop a 132kV double circuit twin tern OHPL

and 33/132kV onsite substation. The Karreebosch OHPL will evacuate power from the

Karreebosch on site substation to the existing Bon Espirange Substation.

CTS HERITAGE

Technical Specifications:

• 132kV twin tern double circuit OHPL (approximately 9km in length);

OHPL servitude width up to 45m, including a servitude road (right of way servitude up to

14m wide, 7m on either side of the centreline) which will follow beneath the OHPL as far as

possible; with additional 4x4 access tracks deviating dependant on terrain;

One 33/132kV onsite substation (up to 30 000m2);

• One O&M building (up to 10 000m2) located within the substation footprint;

• Monopole or lattice structures to be constructed;

It is anticipated that towers will be located on average 200m to 250m apart; however,

longer spans may be needed due to terrain, and avoidance of site sensitivities and

watercourse crossings.

The entire extent of the proposed 132kV Karreebosch OHPL, 33/132kV Substation and associated

infrastructure is located within one (1) of the Strategic Transmission Corridors, namely the Central

Corridor, as defined in and in terms of the procedures laid out in Government Notice (GN) No. 113.

As mentioned above, the Karreebosch Grid EA has been authorised (EA Ref:

14/12/16/3/3/1/2608/AM3/1). As per Condition 12 the EA, the final site layout plan must be

informed by a specialist micro-siting exercise to inform the final placement of the substation,

pylon structures and associated road infrastructure. As per Condition 13 of the EA, the EMPRs

must be amended to include the final layout for approval and any additional mitigation measures

required to be included in the EMPrs.

**Heritage Assessment** 

CTS Heritage completed a Heritage Impact Assessment for the proposed grid connection in

August 2022. This HIA assessed the impact to heritage resources anticipated from various

alternatives. This letter is drafted in order to satisfy Conditions 12 and 13 of the EA as noted

above.

To this end, we have mapped the final site plan and anticipated pylon placement against the

track paths of our field assessment and against the location of known heritage resources of

significance (Figures 2 and 3).

CTS HERITAGE

**Specialist Comment - Condition 12** 

As indicated in Figure 2, the Final Site Plan was surveyed as part of the HIA process completed for

the OHL. As is evident in Figure 3a and 3b, the Final Site Plan avoids direct impact to known

significant heritage resources.

This letter is therefore drafted to confirm that the final site plan for the Karreebosch OHL and

substation does not impact any known heritage resources and adheres to the recommendations

included in the CTS Heritage HIA report for this development (August 2022) which concludes that

"There is no objection to the proposed development of the Karreebosch OHL and onsite

substation in terms of impacts to heritage resources and there is no preferred alternative for the

OHL route or onsite substation on condition that:

- Should OHL Alternative 1B be developed, a walkdown of final alignment must be

conducted by a palaeontologist with an approved workplan for the collection of sensitive

fossil resources that are at risk.

The attached Chance Fossil Finds Procedure must be implemented throughout the

construction phase of the development

- The mitigation measures proposed in section 9 of the VIA are implemented

- Should any buried archaeological resources or burials be uncovered during the course of

development activities, work must cease in the vicinity of these finds. The relevant

heritage authority (the South African Heritage Resources Agency (SAHRA) in the Northern

Cape and Heritage Western Cape (HWC) in the Western Cape) must be contacted

immediately in order to determine an appropriate way forward."

As route alignment 1A and 3 were authorised in the Karreebosch OHL EA (DFFE REF:

14/12/16/3/3/1/2608/AM3/1), the recommendation pertaining to OHL Alternative 1B is no longer

applicable.

There is no objection to the implementation of the Final Site Plan from a heritage perspective.

**Specialist Comment - Condition 13** 

As the final site plan avoids impact to known significant heritage resources, no site specific

mitigation is required. No additional mitigation measures are required to be included in the EMPrs.

## Conclusion

There is no objection to the proposed Final Site Plan in terms of impacts to heritage resources. No additional mitigation measures are required to be included in the EMPrs.

Please feel free to contact me should you have any further questions or concerns in this regard.

Yours sincerely

Jenna Lavin
