SCOPING REPORT FOR THE APPLICATION OF A MINING RIGHT ON THE REMAINDER AND PORTION 1 OF THE FARM DAMPLAATS 319 IN THE MAGISTERIAL DISTRICT OF BOSHOF

FOR

SEMI MASEME TV PRODUCTION CC

DMR REF. NO. FS 10073 MR

Compiled by: Engedi Minerals and Energy

Physical Address: 15, Barnes Street, Westdene, Bloemfontein, 9301

Postal Address: P.O. Box 22372, Extonweg, 9313

Telephone: 051 430 1748 Cell: 079 3626 046 Fax: 086 556 2568

Email address: info@engedime.com

Contact Person: Mr T Mulaudzi

SCOPING REPORT

FOR LISTED ACTIVITIES ASSOCIATED WITH MINING RIGHT ACTIVITIES IN CASES OF DIAMOND (GENERAL), DIAMOND (KIMBERLITE) AND STONE AGGREGATE

SUBMITTED FOR ENVIRONMENTAL AUTHORIZATIONS IN TERMS OF THE NATIONAL ENVIRONMENTAL MANAGEMENT ACT, 1998 AND THE NATIONAL ENVIRONMENTAL MANAGEMENT WASTE ACT, 2008 IN RESPECT OF LISTED ACTIVITIES THAT HAVE BEEN TRIGGERED BY APPLICATIONS IN TERMS OF THE MINERAL AND PETROLEUM RESOURCES DEVELOPMENT ACT, 2002 (MPRDA) (AS AMENDED).

NAME OF APPLICANT: Semi Maseme TV Production CC

TEL NO: N/A

FAX NO: 086 520 2210

POSTAL ADDRESS: N/A

PHYSICAL ADDRESS: 13 Humewood, Cromwell Road, Naval view, Bloemfontein, 9300

FILE REFERENCE NUMBER SAMRAD: FS 30/5/1/2/2/10073 MR

IMPORTANT NOTICE

In terms of the Mineral and Petroleum Resources Development Act (Act 28 of 2002 as amended), the Minister must grant a mining or mining right if among others the mining "will not result in unacceptable pollution, ecological degradation or damage to the environment".

Unless an Environmental Authorisation can be granted following the evaluation of an Environmental Impact Assessment and an Environmental Management Programme report in terms of the National Environmental Management Act (Act 107 of 1998) (NEMA), it cannot be concluded that the said activities will not result in unacceptable pollution, ecological degradation or damage to the environment.

In terms of section 16(3)(b) of the EIA Regulations, 2014, any report submitted as part of an application must be prepared in a format that may be determined by the Competent Authority and in terms of section 17 (1) (c) the competent Authority must check whether the application has taken into account any minimum requirements applicable or instructions or guidance provided by the competent authority to the submission of applications.

It is therefore an instruction that the prescribed reports required in respect of applications for an environmental authorisation for listed activities triggered by an application for a right or permit are submitted in the exact format of, and provide all the information required in terms of, this template. Furthermore please be advised that failure to submit the information required in the format provided in this template will be regarded as a failure to meet the requirements of the Regulation and will lead to the Environmental Authorisation being refused.

It is furthermore an instruction that the Environmental Assessment Practitioner must process and interpret his/her research and analysis and use the findings thereof to compile the information required herein. (Unprocessed supporting information may be attached as appendices). The EAP must ensure that the information required is placed correctly in the relevant sections of the Report, in the order, and under the provided headings as set out below, and ensure that the report is not cluttered with un-interpreted information and that it unambiguously represents the interpretation of the applicant.

OBJECTIVE OF THE SCOPING PROCESS

- 1) The objective of the scoping process is to, through a consultative process—
- (a) identify the relevant policies and legislation relevant to the activity;
- (b) motivate the need and desirability of the proposed activity, including the need and desirability of the activity in the context of the preferred location;
- (c) identify and confirm the preferred activity and technology alternative through an impact and risk assessment and ranking process;
- (d) identify and confirm the preferred site, through a detailed site selection process, which includes an impact and risk assessment process inclusive of cumulative impacts and a ranking process of all the identified alternatives focusing on the geographical, physical, biological, social, economic, and cultural aspects of the environment;
- (e) identify the key issues to be addressed in the assessment phase;
- (f) agree on the level of assessment to be undertaken, including the methodology to be applied, the expertise required as well as the extent of further consultation to be undertaken to determine the impacts and risks the activity will impose on the preferred site through the life of the activity, including the nature, significance, consequence, extent, duration and probability of the impacts to inform the location of the development footprint within the preferred site; and
- (g) Identify suitable measures to avoid, manage, or mitigate identified impacts and to determine the extent of the residual risks that need to be managed and monitored.

SCOPING REPORT

- 2) Contact Person and correspondence address
 - a) Details of:
 - i) THE EAP WHO PREPARED THE REPORT

Name of The Practitioner: Tshimangadzo Mulaudzi, Engedi Minerals and Energy (Pty) Ltd

Tel No.: 079 362 6046 **Fax No.**: 086 556 2568

e-mail address:info@engedime.com

- ii) EXPERTISE OF THE EAP
- (1) The qualifications of the EAP

(With evidence attached as Appendix 1).

Honours Degree in Mining and Environmental Geology

(2) Summary of the EAP's past experience.

(Attach the EAP's curriculum vitae as Appendix 2)

Tshimangadzo hold an Honours Degree in Mining and Environmental Geology from the University of Venda. He has since been working as an environmental geologist and environmental practitioner. He has 5 years' experience in Environmental Science, 3 years' experience in Geology, and 5 years' experience in public participation.

Tshimangadzo has been carrying out Environmental Impact Assessment Procedure since 2012, managing a construction company called Tshedza Concrete Art in Limpopo Province, Makhado Town.

In 2014, he joined a large mining consulting company in Kimberly called Breeze Court Investments 47 (Pty) Ltd (Geologist and Mining Consulting firm). This is where Mr Mulaudzi acquired in-depth experience and know how in the mining consulting business by assisting the large to small scale mining companies to obtain mining right, mining rights, mining permits, technical co-operate permits, reconnaissance permits, exploration rights, production rights, integrated water use license, environmental authorisation among other licenses.

Tshimangadzo has five years working experience in environmental, geology and public participation.

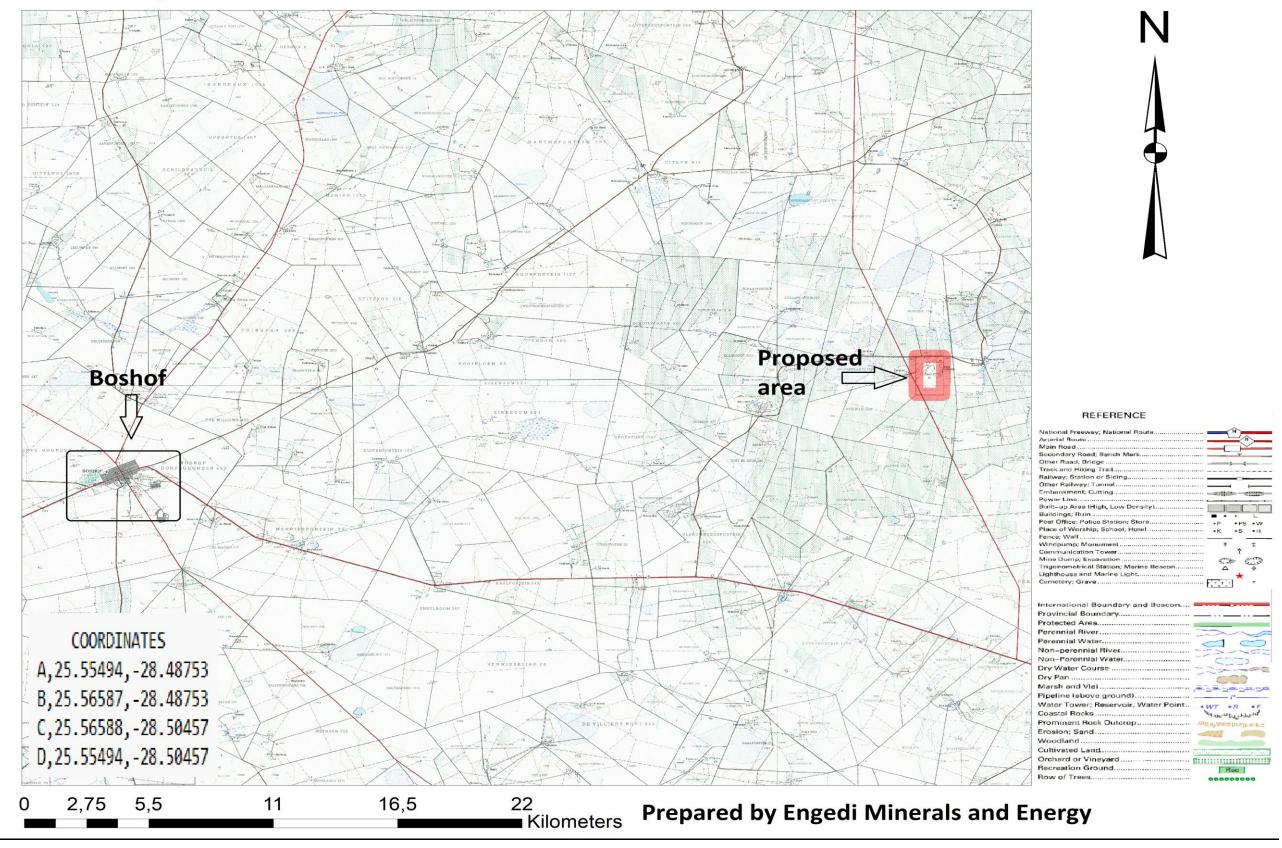

b) Description of the property.

Farm Name:	Remainder and Portion 1 of the Farm Damplaats 319
Application area (Ha)	200 Ha
Magisterial district:	Boshof
Distance and direction from nearest town	32 km south east of Dealesville on the R59/R64, 40 km south from Hertzogville on the R59 and 50km west of
	Boshof on the R64
21 digit Surveyor General Code for each farm portion	F004000000031900000 F004000000031900001

c) Locality map

(shows nearest town, scale not smaller than 1:250000 attached as Appendix 3).

Locality Map of the Remainder and Portion 1 of the Farm Damplaats 319

d) Description of the scope of the proposed overall activity.

i) Listed and specified activities

Provide a plan drawn to a scale acceptable to the competent authority but not less than 1: 10 000 that shows the location, and area (hectares) of all the aforesaid main and listed activities, and infrastructure to be placed on site and attach as **Appendix 4**

(E.g. For mining - drill site, site camp, ablution facility, accommodation, equipment storage, sample storage, site office, access route etc. E.g. for mining,- excavations, blasting, stockpiles, discard dumps or dams, Loading, hauling and transport, Water supply dams and boreholes, accommodation, offices, ablution, stores, workshops, processing plant, storm water control, berms, roads, pipelines, power lines, conveyors etc.)	AERIAL EXTENT OF THE ACTIVITY Ha or m ²	LISTED ACTIVITY (Mark with an X where applicable or affected).	APPLICABLE LISTING NOTICE (GNR 324, GNR 325 or GNR 327) GNR 325	WASTE MANAGEMENT AUTHORISATION (Indicate whether an authorisation is required in terms of the Waste Management Act). (Mark with an X)
Any activity including the operation of that activity which requires a mining right as contemplated in section 22 of the Mineral and Petroleum Resources Development Act, 2002 (Act No. 28 of 2002), including- a) Associated infrastructure, structures and earthworks, directly related to the extraction of the mineral resource [,],; or b) [including activities for which an exemption has been issued in	190 Ha		Listing Notice 2 Activity No. 17	X

Environmental Management:	
Waste Act, 2008 applies	

ii) Description of the activities to be undertaken

(Describe Methodology or technology to be employed, and for a linear activity, a description of the route of the activity

DESCRIPTION OF PLANNED NON-INVASIVE ACTIVITIES:

(These activities do not disturb the land where mining will take place e.g. aerial photography, desktop studies, aeromagnetic surveys, etc)

Mining Right

The activity is for the mining right which will involve the mining of diamond (general), diamond (kimberlite) and stone aggregate at the proposed area. The activities include the dredging or removal of gravel, mechanically removing the diamondiferous gravel through excavation. The gravel will be stockpiled and screened.

The topsoil and overburden (if occurring above the diamond containing gravel and other commodities) will be removed with a front-end loader prior to extraction of diamond containing gravel. The gravel will be screened for diamonds and then backfilled into the open trenches before topsoil will be replaced for land rehabilitation. A rotary pan will be used to retrieve the diamonds. Stone aggregate that may occur will be stockpiled and removed before final rehabilitation. The mining activities will not be near a waterway or riparian zone and will only disturb grazing field. No crop fields are present in the proposed mining right footprintarea.

The following equipment will be used: front end-loader, dumper and 1xChieftan screening/crushing plant

Semi Maseme is graduating their Prospecting Right.

e) Policy and Legislative Context

APPLICABLE LEGISLATION AND GUIDELINES USED TO COMPILE THE REPORT(a description of the policy and legislative context within which the development is proposed including an identification of all legislation, policies, plans, guidelines, spatial tools, municipal development planning frameworks and instruments that are applicable to this activity and are to be considered in the assessment process);	REFERENCE WHERE APPLIED	
MPRDA (Act no. 28 of 2002, as amended by Act no. 49 of 2008) All phases		
NEMA (Act no. 107 of 1998) All phases		
National Water Act (Act no 36 of 1998)	All phases	
Mine Health and Safety Act, Act no. 29 of 1996 All phases		

f) Need and desirability of the proposed activities.

(Motivate the need and desirability of the proposed development including the need and desirability of the activity in the context of the preferred location).

Project need and desirability

The need for the proposed development is of paramount importance as it is going to assist the local community in terms of poverty alleviation through job creation, black economic empowerment in terms of the mining charter which will contribute to the nation's visions of job creation.

Benefits of the project

Benefits of the project may include increased employment of local residents in the area, greater economic input into the area allowing better development of the towns and surrounding area, and greater socio-economic stability.

g) Period for which the environmental authorisation is required

The required period is 30 years.

h) Description of the process followed to reach the proposed preferred site.

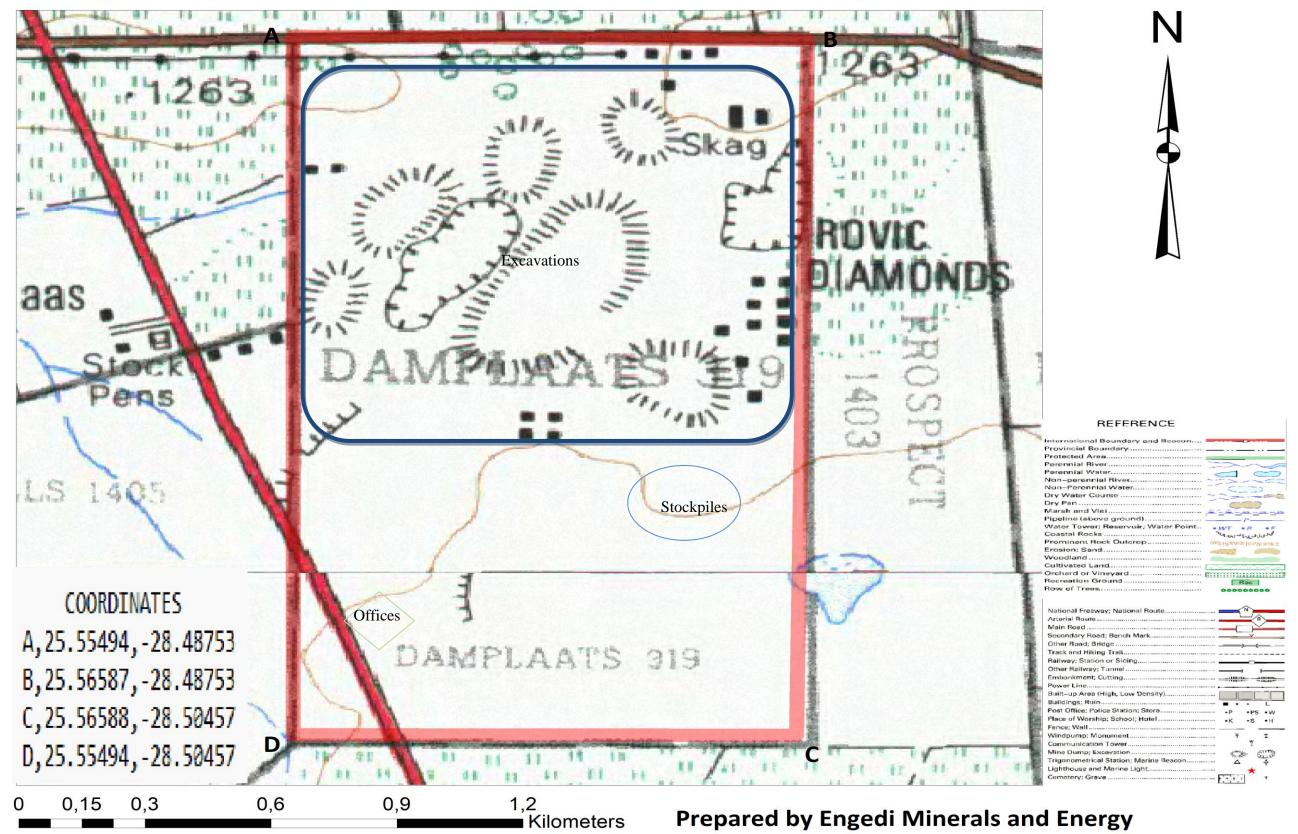

NB!! – This section is not about the impact assessment itself; It is about the determination of the specific site layout having taken into consideration (1) the comparison of the originally proposed site plan, the comparison of that plan with the plan of environmental features and current land uses, the issues raised by interested and affected parties, and the consideration of alternatives to the initially proposed site layout as a result.

i) Details of all alternatives considered.

With reference to the site plan provided as Appendix 4 and the location of the individual activities on site, provide details of the alternatives considered with respect to:

- (a) the property on which or location where it is proposed to undertake the activity;
- (b) the type of activity to be undertaken;
- (c) the design or layout of the activity;
- (d) the technology to be used in the activity;
- (e) the operational aspects of the activity; and
- (f) the option of not implementing the activity.

Layout Map of the Remainder and Portion 1 of the Farm Damplaats 319

The map above shows location proposed activities, type of activities and design or layout of activities.

- d) The main activities of the proposed mining is open pit mining. Trucks will be used to transport Diamond (General), Diamond (Kimberlite) and Stone Aggregate to the plant and market. All available topsoil from position of the first excavation area will be removed and stored separately in a demarcated area for the final rehabilitation.
- e) Open cast/roll over mining will be used to access Diamond (General), Diamond (Kimberlite) and Stone Aggregate. Trucks will be used to transport Diamond (General), Diamond (Kimberlite) and Stone Aggregate to the plant and market. All available topsoil from position of the first excavation area will be removed and stored separately in a demarcated area for the final rehabilitation. The rehibilitation will take place concurrently with the mining work programme. All activities will happen outside 100 m away from wetlands.
- f) The historic land use is one of cattle farming. The mining option will result in the continuation of such land use after rehabilitation.

Although it could probably remain economically viable, the continuation of agriculture will not provide the level of economic growth to the area that mining would offer. After mine closure and rehabilitation of mined area, the land capability may return to grazing, allowing the continuance of certain agricultural practices. The mine will also promote sustainable local economic development, to give communities the skills required to remain economically viable and successful after mine closure.

If the project were not to proceed, the additional economic activity, skills development and available jobs would not be created, the Diamond (General), Diamond (Kimberlite) and Stone Aggregate reserve would remain unutilised, the current land uses and economic activities would continue as at present, with little or no economic growth developing in the region. There are currently no foreseeable significant environmental impacts that will outweigh the economic benefits that would be generated by the project; however this will be further assessed during the EIA.

If mining activities on the remainder and portion 1 of the farm Damplaats 319 were not to proceed with the proposed project, mining of these commodities will not necessarily be avoided, as another application in terms of the MPRDA (Act no. 28 of 2002) can be made by another company. Unless the government declares the area "off limits" to mining, mining houses will continue to attempt to mine the Diamond (General), Diamond (Kimberlite) and Stone Aggregate.

Details of the Public Participation Process Followed

Describe the process undertaken to consult interested and affected parties including public meetings and one on one consultation. NB the affected parties must be specifically consulted regardless of whether or not they attended public meetings. (Information to be provided to affected parties must include sufficient detail of the intended operation to enable them to assess what impact the activities will have on them or on the use of their land.

Engedi Minerals and Energy was appointed by Semi Maseme TV Production CC as the independent consultant to conduct the Public Participation process as part of the EIA as stipulated in Sections 56 - 59 of the NEMA (Act no. 107 of 1998) as well as in Section 22 of the MPRDA (Act no. 28 of 2002).

As stipulated in the MPRDA (Act no. 28 of 2002) and in Regulation 49(1) (f) (MPRDA Regulation GN R527), I&APs need to be notified and consulted with, as part of an application for mining rights.

Identification of Interested and Affected Parties

The following categories of stakeholders were identified: the landowners of the remaining extent of the farm Randfontein 259 (the area included in the Mining Right Application i.e. the site). In addition other potential stakeholders were identified and invited to register themselves as I&APs. This invitation was also extended to the public by means of site notices and newspaper notices.

Landowners & lawful occupiers of the site

The title deed owners of the application area will be listed in the table below. According to the title deed ownership records, the landowner of the application area is a private landowner.

Farm name	Portion (if applicable)	Extent (ha)	Owner	Title deed number
Damplaats	Remaining extent	202 3429	Kleinkor Sewentien	T4544/1925
Damplaats	1			

At the time of writing, formal consultation has taken place. The landowner of the application area has been informed of the proposed mining activities and the process to follow. According to information provided by the

landowner of the application area, there are no communities living on the site, but it could not be established whether there are communities living on adjacent properties.

ii) Summary of issues raised by I&APs

(Complete the table summarising comments and issues raised, and reaction to those responses)

The public participation report is attached as appendix 5.

- iii) The Environmental attributes associated with the sites
- (1) Baseline Environment
- (a) Type of environment affected by the proposed activity.

(Its current geographical, physical, biological, socio- economic and cultural character).

Physical environment

The environment on site relative to the environment in the surrounding area

1.1 Climate

Boshof's climate is a local steppe climate. During the year, there is little rainfall in Boshof. This location is classified as BSk by Köppen and Geiger. In Boshof, the average annual temperature is 17.1 °C. Precipitation here averages 450mm. Precipitation is the lowest in June, with an average of 6 mm. Most precipitation falls in February, with an average of 70mm. At an average temperature of 24.0 °C, January is the hottest month of the year. In July, the average temperature is 8.9 °C. It is the lowest average temperature of the whole year.

1.2 Topography and Elevation:

The regional topographical setting of the study area is classified as *Plains and Pans*. The site is located in a relatively flat/plain area with a slight rise in slope towards the south-west. The highest point is located in the south-western section of the site at an elevation of approximately 1253 m above mean sea level (mamasl), with the lowest point occurring in the north-east at an elevation of approximately 1250 mamsl

1.3 Geology and Soils:

According to available geological information the study area is underlain by shale of the Ecca Group, Karoo Sequence with dolerite intrusions. The study area does not reflect any risk for the formation of sinkholes or subsidence caused by the presence of water-soluble rocks (dolomite or limestone). This must still be confirmed by the engineering geologist/civil engineer. The site is covered by red-yellow apedal, freely drained soils; red, high base status, > 300 mm deep (no dunes).

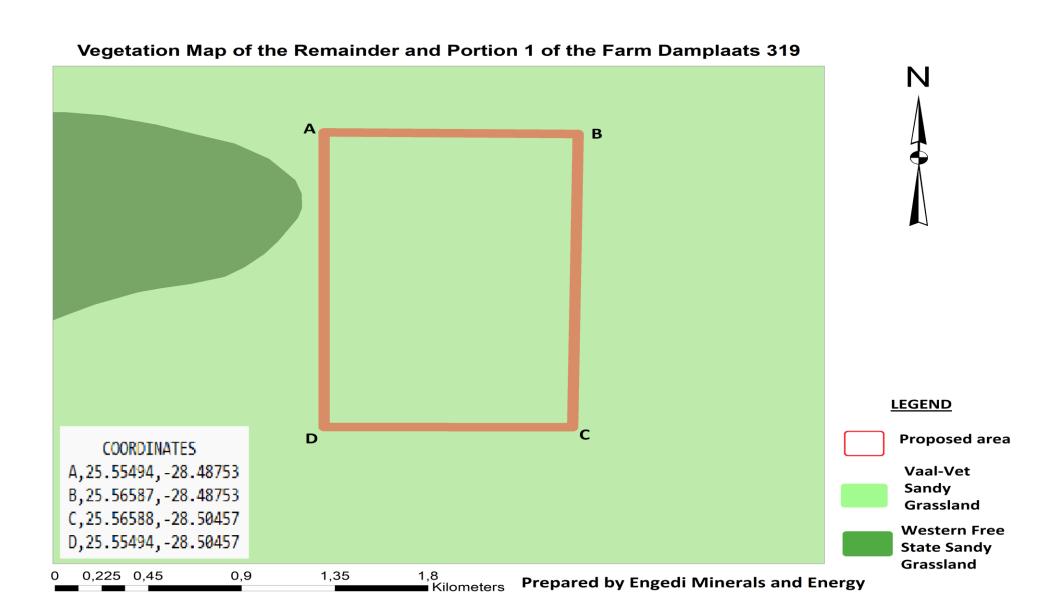

1.4 Biological Environment

1.4.1. Vegetation

This vegetation type is described as follows: "Grasslands are dominated by a single layer of grasses. The amount of cover depends on rainfall and the degree of grazing. Trees are absent, except in a few localized habitats. Geophytes are often abundant. Frosts, fire and grazing maintain the grass dominance and prevent the establishment of trees. There are two categories of grass plants: sweet grasses have lower fibre content, maintain their nutrients in the leaves in winter and are therefore palatable to stock. Sour grasses have higher fibre content and tend to withdraw their nutrients from the leaves during winter so that they are unpalatable to stock.

At higher rainfall and on more acidic soils, sour grasses prevail, with 625 mm per year taken as the level at which unpalatable grasses predominate. C4 grasses dominate throughout the biome, except at the highest altitudes where C3 grasses become prominent. It is expected due to the altitude that C4 grasses will be the dominant vegetation on this site. Grass plants tolerate grazing, fire, and even mowing, well: most produce new stems readily, using a wide variety of strategies. Overgrazing tends to increase the proportion of pioneer, creeping and annual grasses, and it is in the transition zones between sweet and sour grass dominance that careful management is required to maintain the abundance of sweet grasses.

The Grassland Biome is the mainstay of dairy, beef and wool production in South Africa. Pastures may be augmented in wetter areas by the addition of legumes and sweet grasses. The Grassland Biome is also the cornerstone of the maize crop, and many grassland types have been converted to this crop. Sorghum, wheat and sunflowers are also farmed on a smaller scale.

1.4.2. Fauna

1.4.2.1. Mammals

In the Boshof area, three very different natural habitats converge: grassland, Karoo and Kalahari bushveld. Therefore, the land is suitable to accommodate a wide variety of species of game. Apart from endemic small mammals, one find springbok, blesbok, reedbuck, redbuck, eland, gemsbok, kudu, rhebuck, zebra, buffalo, deer, warthog, blue- and black wildebeest, red hartebeest, ostrich, bontebok, oribi, tsessebe, nyala and lechwe (roan waterbuck) on various farms - even rhino, giraffe, camel, lions and white lions are found on some of these farms. Some farmers stock game to complement their stock farming.

1.4.2.2 Birds

If your passion is game or bird watching, most of these farms will accommodate your every wish, as the Boshof district can also boast with a very unique bird list of almost 200 different species of birds. Boshof is also visited every year by large numbers of lesser and Rock Kestrels. A large variety of raptors, including the Lappet-faced Vulture, White-backed Vulture, Cape Vulture, Martial Eagle and Verreaux's Eagle are endemic to the region. There are even the rare visitors to the region: Red-billed Oxpeckers, Common Redstart and Blue Crane.

1.4.3. Conservation areas

The site is located within the Sandveld Nature Reserve which is about 37,000 Ha in size. It is named after its sandy sandveld area, although part of its surface consists of thornveld savanna, with camelthorn trees. Among the large mammals present in the reserve, the white rhino, giraffe, sable antelope, roan antelope, African buffalo, blue wildebeest and zebra deserve mention.

Surface water

1.5.1 Catchment

Harts River

The Harts River is a northern tributary of the Vaal River, which in turn is the largest tributary of the Orange River (also known as the Gariep River, the largest river in South Africa). Its source is in the North West Province, but the greater part of its basin is located in the Northern Cape Province, which it enters a few kilometers downstream from the Taung Dam.

The Harts forms a natural boundary for the Ghaap Plateau, located between the Harts River and the Kuruman Hills.

Molopo River

The Molopo River is one of the main rivers in Southern Africa. It has a length of approximately 960 kilometers and a catchment area of 367,201 km2 with Botswana, Namibia and South Africa sharing roughly about a third of the basin each.

Its source is between Groot Marico and Lichtenburg and the river generally flows first to the west, and then to the southwest from its source. In its middle course the Molopo River forms a significant section of the border between Botswana and South Africa.

River flow is intermittent and when it flows, its water flows very slowly owing to a gradient of only 0.76 m/km. Floods are rare because the vast sandveld areas of the Kalahari Desert on the Namibian side of its basin absorb all water from the seasonal rains.

Vaal River

Vaal River is the largest tributary of the Orange River in South Africa. The river has its source near Breyten in Mpumalanga province, east of Johannesburg and about 30 kilometres (19 mi) north of Ermelo and only about 240 kilometres (150 mi) from the Indian Ocean. It then flows westwards to its conjunction with the Orange River southwest of Kimberley in the Northern Cape. It is 1,120 kilometres (700 mi) long, and forms the border between Mpumalanga, Gauteng and North West Province on its north bank, and the Free State on its south.

It is the third largest river in South Africa after the Orange River (2200 km long) and the Limpopo River (1750 km long) and was established as the main source of water for the great Witwatersrand area after the gold rush during the 19th century. The Vaal Dam lies on the Vaal River in Deneysville just south of the border between Gauteng and the Free State.

1.5.2 Water Management Area

Lower Vaal Water Management Area

1.5.3 Rivers

Harts River, Molopo River and Vaal River.

Spitskop Dam Harts River and Vaalharts Storage Weir Vaal River.

1.6 Socio-economic setting

Most commercial and industrial activities are situated in Boshof and Kimberley. Primary activities in Boshof are restricted to agriculture which includes livestock, farming, game farming and crop farming the commercial sector mainly consists of service provision to the agricultural community in hinterland.

1.6.1 Population

Total	Density
8 509	92.78 km²

1.6.2 Race

POPULATION GROUP	PERCENTAGE
Black African	78.5%
Coloured	10.5%
Indian or Asian	0.4%
White	10.1%
Other	0.5%

1.6.3 Gender composition

GENDER	POPULATION	PERCENTAGE
Female	3 882	45.6%
Male	4 627	54.4%

1.6.4 Education

According to the 2011census, Tokologo Local Municipality has a total population of 28 986, of which 84, 5% is African Black, 9, 9% is white, with the other population groups making up the remaining 5, 6%. Of those aged 20 years and older, 6, 6% have completed primary school, 27, 3% have some secondary education, 17, 8% have completed matric and 5, 1% have some form of higher education.

Since 1996 to 2011 people attaining matric certificates income from 5.4% in 1996 to 12.6% in 2011. As for higher education levels, there was a decrease in number of people who attained higher education level certificates from 1996 to 2001 from 2.2% to 1.8% whereas there was an increase from 1.8% to 3.4% in 2001 and 2011.

1.6.5 Employment

9122 people are economically active (employed or unemployed but looking for work), and of these 27, 4% are unemployed. Of the 4647economically active youth (15 – 34 years) in the area, 35, 8% are unemployed. The unemployment rate increased from 22.5% in 1996 to 27.0% in 2001 (DBSA 2005:164). This was a much lower increase than was reported for the rest of the province's municipalities and the 2001 figure of 27.0% is indeed the lowest figure for the province.

Oddly enough, given the relatively high employment rate, the Real Gross Value-Added (GVA) for 2003 of R2 785 per capita is easily the lowest in the province – the next lowest being Phumelela at R3 528. Tokologo Real Gross Value actually *decreased* from 1996 when it stood at R2 979. The average growth in Real Gross Value between 1996 and 2003 stands at 0.5%. Nominal Real Gross Value for 2003 stood at R162-million which was extremely low, being a little over half of the next lowest (Phumelela at R303-million) and a mere 0.3% of the provincial total of R53-billion.

Inland water features

Groundwater

The groundwater study will be undertaken and groundwater results will be included in the EIA.

Air quality

The ambient air quality in the area of the site is expected to be acceptable. There are however a number sources of air pollution close to the site including mining activities and agricultural activities. The residences within and near the site are considered sensitive air quality receptors.

Noise

The ambient noise condition in the area of the site is expected to be quiet and representative of a rural noise district. The noise sensitive sites may be the residences within and near the site.

Cultural and heritage resources

It is important to do a heritage impact assessment before any mining activity takes place. Anyone who intends to undertake a development must notify the heritage resource authority (refer to SAHRA and the NHRA (Act no. 25 of 1999)). A Heritage Impact Assessment is not limited to artefacts, historical buildings and graves; it is far more encompassing and includes intangible and invisible resources such as places, oral traditions and rituals.

The following terminology is used when referring to cultural, historic and archaeological heritage:

Stone Age: The Stone Age began with the appearance of early humans. The Stone Age people were hunter-gatherers. Stone tools and rock art are found throughout South Africa. The Stone Age can be divided into the Early Stone Age (2 000 000 - 150 000 Before Present); the Middle Stone Age (150 000 - 30 000 Before Present) and the Late Stone Age (30 000 until ca. AD 200).

Iron Age: This period covers the last 2000 years. Farming communities moved down from the eastern parts of Africa into the southern parts of Africa. These people settled permanently, practised agriculture and had domesticated animals. They introduced metal and mining to southern Africa.

Historical period: This period falls into the last 300 years with the arrival of white settlers on the continent. These settlers moved into the interior of southern Africa to, among others, settle, farm and mine.

A heritage resource can be described as any place or object of cultural significance, i.e. aesthetic, architectural, historic, scientific, social, spiritual, linguistic or technological value or significance.

No archaeological or historic sites or structures could be identified on 1:50 000 topographical maps and Google Earth.

Most of the original vegetation of the proposed mining area has been replaced by mining activities and grazing fields; this could be a reason why no archaeological and historical sites or structures could be identified from the maps or images. Various archaeological and historical sites and San rock art have been identified in the larger region of this proposed mining area (Bergh 1998). Mason (1962) refers to a number of settlements during the Prehistory of the Transvaal, whilst Maggs (1979) also comments on the Iron Age.

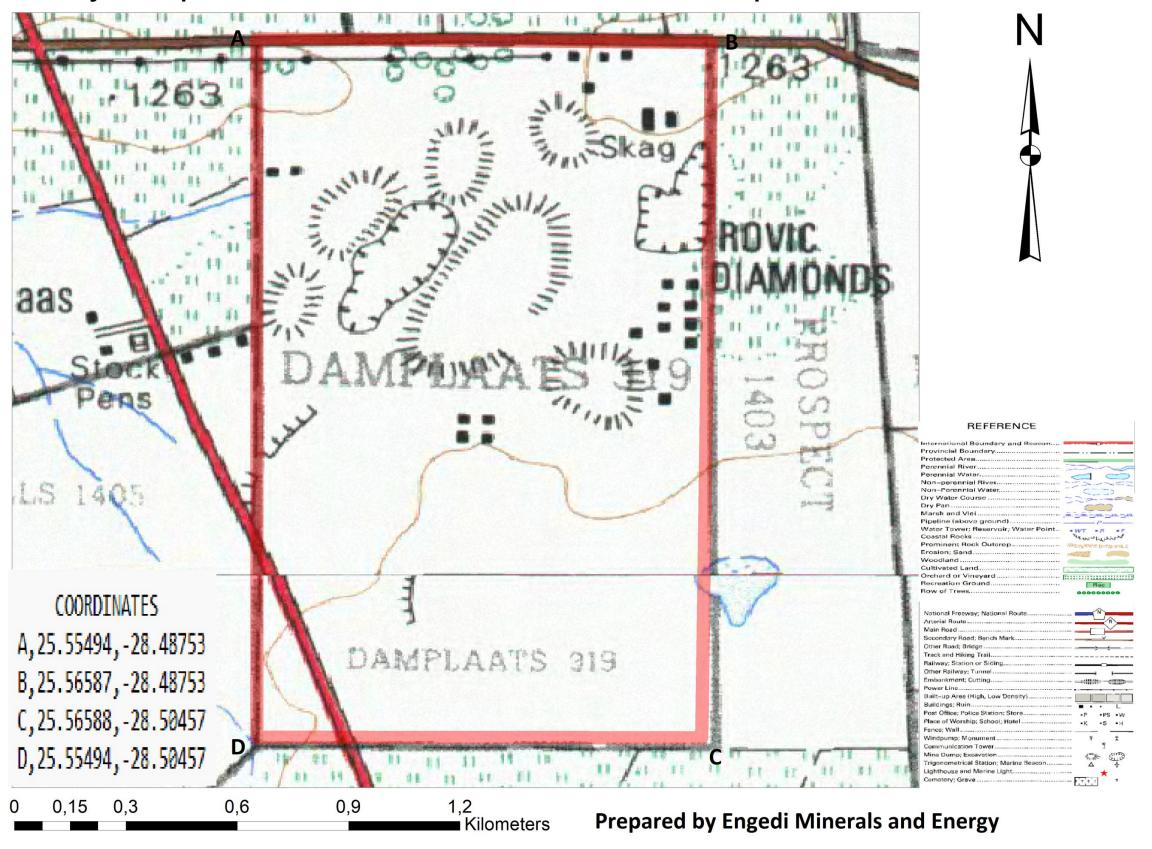

(b) Description of the current land uses.

Agriculture and mining

(c) Description of specific environmental features and infrastructure on the site.

Mining and agriculture. Vegetation is also available for grazing.

Layout Map of the Remainder and Portion 1 of the Farm Damplaats 319

iv) Impacts identified

(Provide a list of the potential impacts identified of the activities described in the initial site layout that will be undertaken, as informed by both the typical known impacts of such activities, and as informed by the consultations with affected parties together with the significance, probability and duration of the impacts.

ASPECT	POTENTIAL IMPACT
Soil	Compaction – from movement of heavy machinery
	Contamination – from diesel, oil, grease, etc. used for the trenching machinery and from maintenance of machinery conducted on site
	Contamination – from domestic waste.
	Loss of topsoil – when the trenching site is cleared of vegetation, topsoil may be lost
	Erosion – from the clearing of trenching sites and movement along access tracks
Land use	The land use will temporarily change to mining
	Mining may interfere with any land uses currently taking place on the site
Biodiversity (fauna and flora)	The fauna and flora could be negatively affected by the establishment of the trenching sites and access tracks
	Alien and invasive species could be introduced through the disturbance
Surface- and groundwater	Contamination – from diesel, oil, grease, etc. used for the drilling machinery and from maintenance of machinery conducted on site
	Contamination – from domestic waste, sewerage, drilling core and contaminated soil
	Bulk sampling requires a large amount of water which may be sourced on site, which may result in the reduction of water available to other users
Heritage sites	Heritage sites may be present on the site, which may be disturbed and/or damaged during mining
Dust	Dust from mining activities may coat vegetation making it unsafe for livestock grazing
Noise	Noise from the trenching activities could disturb residents within the site

v) Methodology used in determining the significance of environmental impacts

(Describe how the significance, probability, and duration of the aforesaid identified impacts that were identified through the consultation process was determined in order to decide the extent to which the initial site layout needs revision).

The significance of the impacts will be determined through the consideration of the following criteria:

Probability:	Provides a description of the likelihood/probability of the impact occurring
Extent:	Describes the spatial scale over which the impact will be experienced
Duration:	The period over which the impact will be experienced
Intensity:	The degree/order of magnitude/severity to which the impact affects the health and welfare of humans and the environment
Significance:	Overall significance of the impact on components of the affected environment and whether it is a negative or positive impact

The impacts will be individually described and assessed using the criteria drawn from the EIA Regulations, published by the DEA in terms of the NEMA (Act 107 of 1998).

The significance of each impact is assessed using the following formula (before and after mitigation):

Significance Point (SP) = (Probability + Extent + Duration) x Intensity

The maximum value is 150 SP. The impact significance will then be rated as follows:

SP > 75	Indicates high environmental significance	An impact that could influence the decision about whether or not to proceed with the project regardless of any possible mitigation.
SP 30 – 75	Indicates moderate environmental significance	An impact or benefit which is sufficiently important to require management and which could have an influence on the decision unless it is mitigated.
SP < 30	Indicates low	Impacts with little real effect and which should not have an influence

	environmental	on or require modification of the project design.
	significance	
+ Positive impact		An impact that is likely to result in positive consequences/effects.

		Probability (P)	
None (N)	1	The possibility of the impact occurring in none, due either to the circumstances, design or experience (0%).	
Possible (P)	2	The possibility of the impact occurring is very low, due either to the circumstances, design or experience (25%).	
Likely (L)	3	There is a possibility that the impact will occur to the extent that provisions must therefore be made (50%).	
Highly likely (H)	4	It is most likely that the impacts will occur at some stage of the development and plans must be drawn up before carrying out the activity (75%).	
Definite (D) 5 The impact will take place regardless of any prevention plans, and only mitigation action or contingency plans to contain the effect can be relied on (100%).			
		Extent (E)	
Footprint (F)	1	The impact area extends only as far as the activity which occurs within the total site area.	
Site (S)	2	The impact could affect the whole site or a significant portion of the site.	
Regional (R)	3	The impact could affect the area including the neighbouring farms, the transport route and/or the adjoining towns.	
National (N)	4	The impact could have an effect that expands throughout the country.	
International (I)	5	Where the impact has international ramifications that extend beyond the boundaries of the country.	
Duration (D)			

The period over which the impact will be experienced			
Temporary (T)	1	0 – 18 months (or confined to the construction period).	
Short term (S)	2	18 – 36 months (or confined to the construction and part of the operational period).	
Medium term (M)	3	36 – 48 months (or confined to the construction and whole operational period).	
Long term (L)	5	For the whole life of mine (including closure and rehabilitation period).	
Permanent (P)	5+	Beyond the anticipated lifetime of the project.	
	1	1	

Intensity (I)			
Insignificant (I)	2	Will have a no or very little impact on the health and welfare of humans and environment	
Low (L)	4	Will have a slight impact on the health and welfare of humans and environment	
Moderate (M)	6	Will have a moderate impact on the health and welfare of humans and environment	
High (H)	8	Will have a significant impact on the health and welfare of humans and the environment	
Very high/ don't know (V)	10	Will have a severe impact on the health and welfare of humans and the environment	

vi) The positive and negative impacts that the proposed activity (in terms of the initial site layout) and alternatives will have on the environment and the community that may be affected.

(Provide a discussion in terms of advantages and disadvantages of the initial site layout compared to alternative layout options to accommodate concerns raised by affected parties)

DESCRIPTION	OCCURRING PHASE
Creation of new employment opportunities	
Employment creation during the life of mining activities may be greatly beneficial to a number of households within the surrounding area. It is however anticipated that a contractor operation is the preference and	

therefore job opportunities might be very limited.

Transfer of skills to local people

In order to promote preferential recruitment for local people, it would be necessary to assess the skills available locally and to ensure that these skills match the local positions at the operation. From the data collected to date, it is apparent that there is significant potential for skills transfer given education levels in the area.

Support of local suppliers and contractors

During both the construction and operational phases of the operations, it is expected that a wide variety and generally substantial quantities of goods

Operational phases

vii) The possible mitigation measures that could be applied and the level of risk.

(With regard to the issues and concerns raised by affected parties provide a list of the issues raised and an assessment/ discussion of the mitigations or site layout alternatives available to accommodate or address their concerns, together with an assessment of the impacts or risks associated with the mitigation or alternatives considered).

ASPECT	POTENTIAL IMPACT		MITIGATION MEASURES
	Compaction – from movement of heavy machinery	•	Existing roads and tracks will be used as far as possible. New access tracks will be kept to a minimum. Rehabilitation of disturbed areas will take place.
	Loss of topsoil – when the open cast site is cleared of vegetation, topsoil may be lost	•	Any removed topsoil will be kept to one side and protected from being blown away or being eroded. Rehabilitation of open cast and disturbed areas will take place.
	Erosion – from the clearing of drill sites and movement along access tracks		Sediment and erosion controls will be designed to prevent runoff from the open cast sites into the rivers and any wetland areas. Appropriate water management, sediment and erosion control measures will be designed for roads and tracks
Soil			that may be constructed. Rehabilitation of open cast and disturbed areas will take place.
		•	Topsoil must not be contaminated with oil, grease, diesel, etc. which may inhibit the later growth of vegetation.
	Contamination – from diesel, oil, grease, etc. used for the open cast machinery and from maintenance of machinery conducted on site	•	Open cast sumps and containment measures will be designed to contain all open cast fluid.
	Contamination – from domestic waste, sewerage and open cast	•	Open cast sumps will be constructed sufficiently large to retain all slurry produced during open cast.
	core	•	All chemicals, fuels and oils to be stored on site will be appropriately stored in sealed containers and placed on a lined area.

		•	Inspect equipment daily for leaks. Machinery and equipment will only be maintained over a drip tray, a thin concrete slab or a PVC lining to prevent soil and water contamination. No vehicle will be extensively repaired on site.
		•	All equipment and vehicles must be adequately maintained so that during operations it does not spill oil, diesel, fuel, etc.
		•	Any contaminated soil will be collected into non- permeable bags and disposed of at an approved landfill site.
		•	A chemical toilet will be used on site and will be used in such a way as to prevent water pollution. Full or leaking toilets must be reported to the supervisor for corrective action or replacement.
		•	All open cast core will be removed from the open cast sites or place in a specified area as per request or permission from the land owner
		•	Rehabilitation of open cast and disturbed areas will take place.
		•	Only one pitting site will be operational at any time.
	Mining may interfere with any land uses currently taking place on the site	•	The area to be disturbed will be kept to a minimum (not exceeding 20mx20m).
Land use		•	No pitting site will be established within 50m of any agricultural land unless consent is received from the land owner.
		•	Rehabilitation of open cast and disturbed areas will take place.
Biodiversity (fauna and	The fauna and flora could be negatively affected by the establishment	•	Open cast and access tracks will be located in areas that

flora)	of the open cast sites and access tracks	will result in minimal ground disturbance.
		 A field survey will be undertaken before open cast commences at each open cast site to confirm that no threatened species or ecologically sensitive areas are present in sections to be cleared. Permission will be obtained from the landowner before trees are felled, should it be necessary.
		 All trees protected in terms of the National Forests Act, 1998, will be protected – will not be cut, disturbed, damaged, removed, etc. Rehabilitation of open cast and disturbed areas will take place.
	Alien and invasive species could be introduced through the disturbance	 Machinery will be cleared of mud and seeds prior to relocation to the next site to prevent the spread of alien invasive species. An inspection on whether there is evidence of alien and invasive species as a result of mining activities will be
		 No open cast will be established within 100m of any watercourse or wetland.
Surface-and groundwater	 Contamination – from diesel, oil, grease, etc. used for the open cast machinery and from maintenance of machinery conducted on site Contamination – from domestic waste, sewerage, open cast and contaminated soil Water discharge during open cast 	 Open cast sumps and containment measures will be designed to contain all open cast fluid. Open cast sumps will be constructed sufficiently large to retain all slurry produced during open cast. All chemicals, fuels and oils to be stored on site will be appropriately stored in sealed containers and placed on a lined area.
		All waste will be collected, separated and stored properly in containers with lids and removed to an approved landfill.

			•	Inspect equipment daily for leaks. Machinery and equipment will only be maintained over a drip tray, a thin concrete slab or a PVC lining to prevent soil and water contamination. No vehicle will be extensively repaired on site.
			•	All equipment and vehicles must be adequately maintained so that during operations it does not spill oil, diesel, fuel, etc.
			•	Any contaminated soil will be collected into non- permeable bags and disposed of at an approved landfill site.
			•	A chemical toilet will be used on site and will be used in such a way as to prevent water pollution. Full or leaking toilets must be reported to the supervisor for corrective action or replacement.
			•	All open cast will be drilled and constructed in such a way as to prevent ingress of water into the hole.
			•	Any completed pitting that is not required for groundwater monitoring will be rehabilitated to prevent groundwater contamination.
			•	Rehabilitation of disturbed areas will take place.
		Drinking water	•	Drinking water will be supplied in plastic containers to be stored on site.
		Heritage sites may be present on the site, which may be disturbed and/or damaged during mining	•	Potential heritage sites will be identified during the planning of borehole locations and demarcated.
	Heritage sites		•	Access to these sites will then be limited and all workers will be notified to keep at least 100m away from these sites.
Ĺ				

Air quality (dust)	The air quality will not be disturbed, however, a minimal dust problem may be experienced, especially in the mining area during open cast	 All open cast rigs will be fitted with appropriate dust suppression equipment like water sprays, where possible. Speed limits on gravel roads will be limited to 40km/hr to minimise dust generation. Dust will be effectively controlled in all disturbed areas through water spraying. Excavation, handling and transportation of erodible materials should be avoided during periods of excessive wind. If necessary, other appropriate dust suppression techniques will be administered. For example chemicals, wind fencing, covering of surfaces and vegetation of open areas.
Noise	Noise from the open cast activities could disturb residents within the site	 Modern, low noise emission vehicles and equipment will be favoured. All equipment on site will be maintained in good working order. Open cast will be restricted to day light hours. Speed limits on gravel roads will be limited to 40km/h to minimise noise generation.
Socio-economic	Expectations could be created that numerous job and business opportunities will become available during mining	Due to the nature of mining, employment opportunities will be minimal. The mining crew is small (4-6 people) with specialised skills. Where possible, local people will however be employed during the project.

riii) The outcome of the site selection Matrix. Final Site Layout Plan

(Provide a final site layout plan as informed by the process of consultation with interested and affected parties)

Layout Map of the Remainder and Portion 1 of the Farm Damplaats 319 11 11 11 12 11 11 32 11 11 aas REFERENCE Stockpiles COORDINATES Offices* A, 25.55494, -28.48753 DAMPLAATS 319 B, 25.56587, -28.48753 C, 25.56588, -28.50457 D, 25.55494, -28.50457 0.6 1,2 0.15 0.9 0.3 Prepared by Engedi Minerals and Energy Kilometers

ix) Motivation where no alternative sites were considered.

No location alternatives are applicable to this project since the Diamond (General), Diamond (Kimberlite) and Stone Aggregate is contained in the proposed mining area. Locating the development to another area will result in the commodities possibly not being found and the economy and society not benefitting from future proposed mining and possible mining activities.

x) Statement motivating the preferred site.

(Provide a statement motivation the final site layout that is proposed)

No location alternatives are applicable to this project since Diamond (General), Diamond (Kimberlite) and Stone Aggregate is contained in the proposed mining area. Locating the development to another area will result in the commodities possibly not being found and the economy and society not benefitting from future proposed mining activities.

However, where mining activities occur within sensitive areas (i.e. wetlands, rivers, streams as well as their buffers), utmost caution will be taken to have as little impact as possible to the environment.

(i) Plan of study for the Environmental Impact Assessment process

i. Description of alternatives to be considered including the option of not going ahead with the activity.

The historic land use is one of agriculture, where land use is for grazing and cultivation in the form of maize production. The no-mining option will result in the continuation of such land use. The continuing operation of the existing farming activities (crop production and grazing) without the construction of the proposed mining operation will have very little to no environmental impact. Not only will the surety of water supply to other users in the scheme be increased, a portion of land deemed as having high agricultural potential will remain intact.

Although it could probably remain economically viable, the continuation of agriculture will not provide the level of economic growth to the area that mining would offer. After mine closure and rehabilitation of mined area, the land capability may return to grazing, allowing the continuance of certain agricultural practices. The mining activity will also promote sustainable local economic development, to give communities the skills required to remain economically viable and successful after mine closure.

If the project were not to proceed, the additional economic activity, skills development and available jobs would not be created, the Diamond (General), Diamond (Kimberlite) and Stone Aggregate deposits would remain unutilised, the current land uses and economic activities would continue as at present, with little or no economic growth developing in the region. There are currently no foreseeable significant environmental impacts that will outweigh the economic benefits that would be generated by the project; however this will be further assessed during the EIA.

If mining activities on the REMAINDER AND PORTION 1 OF THE FARM DAMPLAATS 319were not to proceed with the proposed project, mining of Diamond (General), Diamond (Kimberlite) and Stone Aggregate will not necessarily be avoided, as another application in terms of the MPRDA (Act no. 28 of 2002) can be made by another company. Unless the government declares the area "off limits" to mining, mining houses will continue to attempt to mine the Diamond (General), Diamond (Kimberlite) and Stone Aggregate deposits.

ii. Description of the aspects to be assessed as part of the environmental impact assessment process

(The EAP <u>must</u> undertake to assess the aspects affected by each individual mining activity whether listed or not, including activities such as blasting, Loading, hauling and transport, and mining activities such as Excavations, stockpiles, discard dumps or dams, water supply dams and boreholes, accommodation, offices, ablution, stores, workshops, processing plant, storm water control, berms, roads, pipelines, power lines, conveyors, etc...etc..).

ACTIVITY (whether listed or not listed) (E.g. Excavations, blasting, stockpiles, discard dumps or dams, loading, hauling and transport, water supply dams and open cast, accommodation, offices, ablution, stores, workshops, processing plant, storm water control, berms, roads, pipelines, power lines, conveyors, etc.)	POTENTIAL IMPACT (e.g. dust, noise, drainage surface disturbance, fly rock, surface water contamination, groundwater contamination, air pollution etcetc)	ASPECTS AFFECTED	PHASE In which impact is anticipated (e.g. Construction, commissioning, operational, decommissioning, closure, post-closure)	(modify, remedy, control, or stop) through (e.g. noise control measures, storm-water control, dust control, rehabilitation, design measures, blasting controls, avoidance, relocation, alternative activity etcetc)	STANDARD TO BE ACHIEVED (Impact avoided, noise levels, dust levels, rehabilitation standards, end use objectives etcetc)
Mining (open cast)	Compaction – from movement of heavy machinery Contamination –	Soil	Phase 2 - Exploration (open cast)	 Control through management and monitoring Remedy through rehabilitation where negative impacts have been identified 	Impact kept to minimum and rehabilitate affected area.

iii. Description of aspects to be assessed by specialists

There is no need to engage specialist studies in these proposed activities since the farm is already in use for mining purposes. There are no wetlands that exist within the portions of proposed activity. Furthermore, no heritage property exists on site. There will be a ground water study that will be done during EIA process.

iv. Proposed method of assessing the environmental aspects including the proposed method of assessing alternatives

The EIA utilises a rigorous, numerical environmental significance rating process which is based on the accepted impact assessment methodology that uses the probability of an event occurring and the severity of the impact, should an event occur, as factors to determine the significance of a particular environmental risk. To determine the severity of any potential environmental impact, the criteria that are taken into consideration are the spatial extent of the impact, the duration of the impact and the severity of the impact. The probability of an impact occurring is determined by the frequency at which the activity takes place and by how often the type of impact in question has taken place or takes place in similar circumstances. The values assigned to these factors (weighting) are discussed as part of the EIA. To clarify the purpose and limitations of the impact assessment methodology, it is necessary to address the issue of subjectivity in the assessment of the significance of environmental impacts. Even though Engedi Minerals and Energy, and the majority of the environmental impact assessment practitioners propose a numerical methodology for impact assessment, it needs to be accepted that the process of environmental significance determination is inherently subjective. The weight assigned to each factor of a potential impact, and also the design of the rating process itself, is based on the values and perception of risk by members of the assessment team, as well as that of the I&APs and authorities who provide input into the process. Whereas the determination of the spatial scale and the duration of impacts are to some extent amenable to scientific enquiry, the severity value assigned to impacts is highly dependent on perceptions and values of all involved. It is for this reason that it is crucial that all EIAs make reference to the environmental and socio-economic context of the proposed activity to reach an acceptable rating of the significance of impacts. Similarly, the perception of the probability of an impact occurring is dependent on perceptions, aversion to risk and availability of information. It has to be stressed that the purpose of the EIA process is not to provide an incontrovertible rating of the significance of various aspects, but rather to provide a structured, traceable and defendable methodology of rating the relative significance of impacts in a specific context. For the purpose of this study, the methodology employed for the

environmental impact assessment is divided into two distinct phases, namely, impact identification and impact rating.

The significance of each impact is assessed using the following formula (before and after mitigation):

Significance Point (SP) = (Probability + Extent + Duration) x Intensity

The maximum value is 150 SP. The impact significance will then be rated as follows:

SP > 75	Indicates high environmental significance	An impact that could influence the decision about whether or not to proceed with the project regardless of any possible mitigation.
SP 30 – 75	Indicates moderate environmental significance	An impact or benefit which is sufficiently important to require management and which could have an influence on the decision unless it is mitigated.
SP < 30	Indicates low environmental significance	Impacts with little real effect and which should not have an influence on or require modification of the project design.
+	Positive impact	An impact that is likely to result in positive consequences/effects.

	Probability (P)				
None (N)	1	The possibility of the impact occurring in none, due either to the circumstances, design or experience (0%).			
Possible (P)	2	The possibility of the impact occurring is very low, due either to the circumstances, design or experience (25%).			
Likely (L)	3	There is a possibility that the impact will occur to the extent that provisions must therefore be made (50%).			
Highly likely (H)	4	It is most likely that the impacts will occur at some stage of the development and plans must be drawn up before carrying out the activity (75%).			

Definite (D)	5	The impact will take place regardless of any prevention plans, and only mitigation actions or contingency plans to contain the effect can be relied on (100%).
		Extent (E)
Footprint (F)	1	The impact area extends only as far as the activity which occurs within the total site area.
Site (S)	2	The impact could affect the whole site or a significant portion of the site.
Regional (R)	3	The impact could affect the area including the neighbouring farms, the transport route and/or the adjoining towns.
National (N)	4	The impact could have an effect that expands throughout the country.
International (I)	5	Where the impact has international ramifications that extend beyond the boundaries of the country.
		Intensity (I)
Insignificant (I)	2	Will have a no or very little impact on the health and welfare of humans and environment
Low (L)	4	Will have a slight impact on the health and welfare of humans and environment
Moderate (M)	6	Will have a moderate impact on the health and welfare of humans and environment
High (H)	8	Will have a significant impact on the health and welfare of humans and the environment
Very high/ don't know (V)	10	Will have a severe impact on the health and welfare of humans and the environment

v. The proposed method of assessing duration significance

Duration (D)				
The period over which the impact will be experienced				
Temporary (T) 1 0 – 6 months (or confined to the construction period).				

Short term (S)	2	6– 36 months (or confined to the construction and part of the operational period).
Medium term (M)	3	18 – 48 months (or confined to the construction and whole operational period).
Long term (L)	4	48 –60 months For the whole life of mine (including closure and rehabilitation period).
Permanent (P)	5	Beyond the anticipated lifetime of the project.

vi. The stages at which the competent authority will be consulted

It's an ongoing process until project closure.

vii. Particulars of the public participation process with regard to the Impact Assessment process that will be conducted

1. Steps to be taken to notify interested and affected parties.

(These steps must include the steps that will be taken to ensure consultation with the affected parties identified in (h) (ii) herein).

Engedi Minerals and Energy was appointed by Semi Maseme TV Production CC as the independent consultant to conduct the PP process as part of the EIA as stipulated in Sections 56 - 59 of the NEMA (Act no. 107 of 1998) as well as in Section 22 of the MPRDA (Act no. 28 of 2002).

As stipulated in the MPRDA (Act no. 28 of 2002) and in Regulation 49(1) (f) (MPRDA Regulation GN R527), I&APs need to be notified and consulted with, as part of an application for mining rights.

Identification of Interested and Affected Parties

The following categories of stakeholders will be identified: the landowner of the remainder and portion 1 of the farm Damplaats 319 (the area included in the Mining Right Application i.e. the site).

In addition other potential stakeholders will be identified and invited to register themselves as I&APs. This invitation was also extended to the public by means of site notices and newspaper notices.

2. Details of the engagement process to be followed.

(Describe the process to be undertaken to consult interested and affected parties including public meetings and one on one consultation. NB the affected parties must be specifically consulted regardless of whether or not they attended public meetings and records of such consultation will be required in the EIA at a later stage).

Site notices will be placed on the border fences of the study site and on a main route close to the study site which would be conspicuous to passers-by. An advertisement notice of the project, inviting people to provide comments and/or concerns, will be placed within a local newspaper. I&APs will be required to raise issues of importance, share their input, comments and/or concerns to inform the Scoping and EMPr. The draft Scoping/EMPr was made available for review.

3. Description of the information to be provided to Interested and Affected Parties.

(Information to be provided must include the initial site plan and sufficient detail of the intended operation and the typical impacts of each activity, to enable them to assess what impact the activities will have on them or on the use of their land).

Letters and a Background Information Document (BID) were sent to all identified stakeholders either by means of e-mail, fax or by post.

viii. Description of the tasks that will be undertaken during the environmental impact assessment process

a) Application and Scoping

At the onset of the project an application form will be submitted to the DMR. In conjunction with the application, this Consultation Scoping Report will be submitted to the DMR and all commenting authorities and notification of the availability of the report sent to all identified interested and affected parties (I&APs). An updated Scoping report, containing comments and issues identified by I&APs, will be submitted to the DMR. The DMR will issue a decision on the acceptance or refusal of the application.

b) EIR & EMPr

The Impact Assessment Process will be conducted in accordance with the approved Plan of Study (PoS) for EIA. The Consultation EIR and EMPr will be prepared with information and issues identified during the Scoping Phase activities, comments from I&APs, commenting authorities and the findings from the specialist studies.

The Impact Assessment Phase comprises of:

- The completion of the specialist studies and reports;
- The finalisation of the impact assessment;
- The compilation of the Consultation EIR and EMPr;

- The public review of the Consultation EIR and EMPr and possible extended public review period, at the discretion of the competent authority (DMR);
- The compilation of the Final EIR and EMPr; and
- The submission of the Final EIR and EMPr.

The Consultation EIR and EMPr include:

- The details of the EAP who prepared the report;
- A detailed description of the proposed development and alternatives;
- A description of the environment that may be affected by the activity and the manner in which physical, biological, social, economic and cultural aspects of the environment may be affected by the proposed development;
- A description of the methodology of the stakeholder engagement process;
- The comments and response report and stakeholder database;
- A description of the need and desirability of the proposed development and the identified potential alternatives to the proposed activities;
- A summary of the methodology used in determining the significance of potential impacts;
- A description and comparative assessment of all alternatives identified during the EIA process;
- A summary of the findings of the specialist studies;
- A detailed assessment of all identified potential impacts;
- A list of the assumptions, uncertainties and gaps in knowledge;
- An opinion by the consultant as to whether the development is suitable for approval.

Once the Consultation EIR and EMPr have been placed on public review, comments received from stakeholders will be documented and considered in the Final EIR and EMPr which will be placed on public review and simultaneously submitted to the DMR for approval.

(ix) Measures to avoid, reverse, mitigate, or manage identified impacts and to determine the extent of the residual risks that need to be managed and monitored.

ACTIVITY whether listed or not listed (E.g. Excavations, blasting, stockpiles, discard dumps or dams, Loading, hauling and transport, Water supply dams and boreholes, accommodation, offices, ablution, stores, workshops, processing plant, storm water control, berms, roads, pipelines, power lines, conveyors, etcetc.).	POTENTIAL IMPACT (e.g. dust, noise, drainage surface disturbance, fly rock, surface water contamination, groundwater contamination, air pollution etcetc)	MITIGATION TYPE (modify, remedy, control, or stop) through (e.g. noise control measures, stormwater control, dust control, rehabilitation, design measures, blasting controls, avoidance, relocation, alternative activity etc. etc) E.g. refuelling station	contamination.	and settlement facilities will be provided for hazardous materials, such as fuel and oil; • Spill-sorbs or a similar product will be kept on site, and used to clean up hydrocarbon spills in the event that they should occur.
ROM Stockpiles	Soil, surface and Groundwater contamination.	 All facilities with the potential to generate dirty storm water runoff, effluent or wash-down water will be located within the designated dirty water area. Clean runoff will be diverted around the designated dirty areas by means of cut-off canals, sized to accommodate at least the 1:50 year peak flow event.
Storm water evaporation	Loss of habitat from salt deposition Surface and Groundwater	Ensure that the evaporation facility operates within a contained area and will be located within the designated dirty water

contamination.	area.	

I) Other Information required by the competent Authority

- i) Compliance with the provisions of sections 24(4)(a) and (b) read with section 24 (3) (a) and (7) of the National Environmental Management Act (Act 107 of 1998). the EIA report must include the:-
- (1) Impact on the socio-economic conditions of any directly affected person. (Provide the results of Investigation, assessment, and evaluation of the impact of the mining, bulk sampling or Diamond (General), Diamond (Kimberlite) and Stone Aggregate (General) mining on any directly affected person including the landowner, lawful occupier, or, where applicable, potential beneficiaries of any land restitution claim, attach the investigation report as **Appendix 2.19.1** and confirm that the applicable mitigation is reflected in 2.5.3; 2.11.6.and 2.12.herein).

DESCRIPTION	OCCURRING PHASE			
Creation of new employment opportunities				
Employment creation during the life of mining activities may be greatly beneficial to a number of households within the surrounding area. It is however anticipated that a contractor operation is the preference and therefore job opportunities might be very limited.	Construction and Operational phases			
Transfer of skills to local people				
In order to promote preferential recruitment for local people, it would be necessary to assess the skills available locally and to ensure that these skills match the local positions at the operation. From the data collected to date, it is apparent that there is significant potential for skills transfer given education levels in the area.	Construction and Operational phases			
Support of local suppliers and contractors				
During both the construction and operational phases of the operations, it is expected that a wide variety and generally substantial quantities of goods and services will be required by the mine and their contractors. It is recommended that whenever possible, local contractors should be utilized to	Construction and Operational phases			

provide goods and services to the mine.	

2) Impact on any national estate referred to in section 3(2) of the National Heritage Resources Act.

(Provide the results oflowestigation, assessment, and evaluation of the impact of the mining, bulk sampling or Diamond (General), Diamond (Kimberlite) and Stone Aggregate (General) mining on any national estate referred to in section 3(2) of the National Heritage Resources Act, 1999 (Act No. 25 of 1999) with the exception of the national estate contemplated in section 3(2)(i)(vi) and (vii) of that Act, attach the investigation report as **Appendix 2.19.2** and confirm that the applicable mitigation is reflected in 2.5.3; 2.11.6.and 2.12.herein).

There is no heritage site that exist within portions of the proposed activities hence the land is already in use for agricultural purpose.

m) Other matters required in terms of sections 24(4)(a) and (b) of the Act.

(the EAP managing the application must provide the competent authority with detailed, written proof of an investigation as required by section 24(4)(b)(i) of the Act and motivation if no reasonable or feasible alternatives, as contemplated in sub-regulation 22(2)(h), exist. The EAP must attach such motivation as **Appendix 4**).

Alternative investigations were conducted for the alternatives related to the proposed project and no motivations are required for no reasonable or feasible alternatives.

SUMMARY

I am a Candidate in a possession of a BSc (Hons.) in Mining and Geology with vast variety of experience in Geological, Geochemical, Geophysical Exploration, and Managing of a Manufacturing team. Currently I am working as a Consultant Geologist at Breeze Court Investments 47 (Pty) Ltd and I have gained experience in Map Production (Using ArcGis), Identification of Minerals, and Applications for (Mining Right, Mining Right, and Mining Permit on DMR Samrad online portal), Petroleum applications (Compilation of EMP, EIA, Progress report, Environmental Performance

Assessment, Closure application, and Mineral Laws Administration (knowledge of MPRDA, 2002, NWA, 1998, NEMA, 1998, NHRA, 1999, MHSA, 1996, Mining Charter, 2010 and Freedom Charter, 1955.).

I have also worked with the small scale miners in the region of Northern Cape, Free State and North West helping them with the application for Mining permit, mining right and also attend the site inspection with the officials from Department Mineral Resources to help the small scale miners to comply with the legislation of the department.

I served at the Makhado Municipality for two (2) years under Local Economic Development as an Intern (**In Mining, Environmental and Geology Sectors**) and was attending seminars on Local Economic Development issues, interacting with the stake holders and helping the Small Micro Medium Enterprises (SMME's) to get funds from the sponsors.

EMPLOYMEMT HISTORY

Job title : Trainee Mine Geologist

Name of organization: Agnes gold mine

Period : June 2010 – June 2011 (1 year)

Experiences and skills: Face mapping, stope observing, continuous sampling,

Geological data capturing, Report writing and Geological

mapping.

Job title : Chief production, quality, and safety officer

Name of Organization: Tshedza concrete art

Period : January 2012 – January 2013 (1 year, 1 month)

Experiences and skills: Managing high quality production and enforcing safe working

Environment for workers

Job title : LED Intern (in Mining, Environmental and Geology)

Name of Organization: Makhado Local Municipality (Limpopo)

Period : February 2013 – December 2014 (11 Months)

Experiences and skills: To formulate and implement measures and procedures to

Facilitate for the development of SMME's. Implement

Measures, processes, and procedures to attract the Investors,

Facilitate and implement job creation projects and initiatives.

Formulate, review and update LED plans in alignment with

the Province and District Municipality. Facilitate and create

Partnership with regard to service provider, trade exhibitions,

Corporate and SMME's.

Job title : Consultant Environmental Geologist and GIS specialist

Name of organization: Breeze court investment (Pty) Ltd Geol& Min Consultants

Period : January 2014 – January 2015

Experiences and skills: Map Production (Using ArcGis), Identification of Minerals, and

Applications for (Mining Right, Mining Right, and Mining Permit on DMR Samradonline portal), Technical Cooperation Permit, Reconnaissance Permit, Exploration Right, Production right (Petroleum applications) Compilation of EMP, EIA, Environmental Authorisation, Progress report, Environmental Performance Assessment, Closure application, and Mineral Laws Administration (Broad knowledge of MPRDA, 2002), Assisting small scale miners in the region of Northern Cape, North West, and Free State with application for Mining permit and Mining right, help them with compliance in terms of the MPRDA, 2002. Also do the site inspection with the officials from Department of Mineral Resources, and help the miners and management to comply with the statutory while operating and always work in a safe working

conditions and enforce also that the act of one employee must be safer towards

another employee to achieve zero harm.

Job title : Consultant Environmental Geologist and GIS specialist

Name of organization: Engedi Minerals and Energy (Pty) Ltd

Period : February 2015 – Present

Experiences and skills: Map Production (Using ArcGis), Identification of Minerals, and

Applications for (Mining Right, Mining Right, and Mining Permit on DMR

Samradonline portal), Technical Cooperation Permit, Reconnaissance Permit, Exploration Right, Production right (Petroleum applications) Compilation of

EMP, EIA, Environmental Authorisation, Progress report, Environmental

Performance Assessment, Closure application, and Mineral Laws

Administration (Broad knowledge of MPRDA, 2002), Assisting small scale miners in the region of Northern Cape, North West, and Free State with application for Mining permit and Mining right, help them with compliance in terms of the MPRDA, 2002. Also do the site inspection with the officials from Department of Mineral Resources, and help the miners and management to comply with the statutory while operating and always work in a safe working conditions and enforce also that the act of one employee must be safer towards another employee to achieve zero harm.

Knowledge of Legislations and Acts

Constitution of the Republic of South Africa No.108 of 1996

Mineral and Petroleum Resources Development Act, 2002 (Act 28 of 2002)

Mineral and Petroleum Resources Development Act Amendments bill 15 of 2013

Mineral and Petroleum Resources Development Act Regulations

National Water Act, 1998 (Act 36 of 1998)

Mine Health and Safety Act, 1996 (Act 29 of 1996)

National Heritage Resources Act, 1999 (Act 25 of 1999)

National and Environmental Management Act, 1998 (Act 107 of 1998)

Public Finance Management Act, 1999 (Act 1 of 1999) and Act 29 of 1999 as Amended

2014 Environmental Impact Assessment Regulations

Mining Charter, 2010

Freedom Charter, 1955

Municipal System Act, 2000 (Act 32 of 2000)

Municipal Structure Act, 1998 (Act 117 of 1998) and as amended in Act 20 of 2002.

COMPETENCIES

Ability to relate with people,

Ability to work independently and as a team,

Determination to succeed,

Strong leadership skills,

Proactive, resourceful, well organized and able to meet deadlines, and

Ability to communicate effectively

EXTRAMURAL ACTIVITIES AND INTERESTS

I love reading news papers, business literatures, watching discovery channels, News, writing and Public speaking, these help me share my ideas and opinion and to get my message across, and I love learning new things everyday and I am eager to learn.
