Management

PO Box 102532, Meerensee, 3901

INTRODUCTION

Umlando undertook its monthly survey at the Hillendale mine for Exxaro (Pty) Ltd, in August 2008. The mine had progressed and two new areas had been exposed.

RESULTS

No new sites were recorded. A single potsherd was observed on the surface, but that alone is not enough to regard this as a site. The new area also included the farm building that has now been demolished.

The location of the various isolated sherds will be plotted for the annual report.
