

APPENDIX 2: FRIEDENHEIM: PHOTOGRAPHIC DOCUMENTATION

Fig. 1: The servitude which gives access to the property, from the D725 road. The study area is situated to the left (west) and right (east) of this road (image is facing north).

Fig. 2: Section D (see map 3 in text), is entirely previously transformed agricultural lands.

Fig. 3: A General view of the study area facing from north-west to south-east. Most of the property consists of previously transformed lands, with natural vegetation in drainage lines.

Fig. 4: One of the drainage lines with a small rocky outcrop (see fig. 5).

Fig. 5: The rocky outcrops on the property are flat and low.

Fig. 6: The view over the property from north to south. The residential area of Kamagugu is visible in the background.

Fig. 7: The view from south to north. The open sections were transformed agricultural lands with the drainage lines visible in between.

Fig. 8: A general view over the transformed lands to the western border (trees). View from east to west.

Fig. 9: A general view from west to north-east, towards the ravine. The bridge (N4) is outside of the study area.

Fig. 10: The northern section with previously transformed agricultural lands.

Fig. 11: Stones were cleared from the agricultural fields and are visible on the side of the dirt roads.

Fig. 12: Recent building rubble (or a possible foundation) was observed in the northern section.

Fig. 13: Recent concrete pipes were observed in the northern section.

Fig. 14: Recent square concrete bricks were observed near the above (figs. 12 & 13).

Fig. 15: Soil test pits were investigated for any remains of a historical or archaeological nature.

Fig. 16: The middle section: Transformed agricultural lands facing east. The drainage lines will not be affected by the proposed development.

Fig. 17: Soil test pits were observed in this section, and also investigated.

Fig. 18: A large quarry is located to the south west in the middle section, near the western border. The quarry was observed in Google images since 2004.

Fig. 19: Alien trees and large amounts of recent building rubble were observed to the south east of the quarry.

Fig. 20: More recent building rubble, as well as alien trees towards the south east of the quarry, suggest the possibility of recent demolished structures in this section.

Fig. 21: The southern section facing south-east. The section was also historically transformed agricultural lands.

Fig. 22: The southern section borders the residential area of Kamagugu.

Fig. 23: Soil test pits in the southern section were investigated for possible historical or archaeological remains.

Fig. 24: Previous soil test pit in the southern section.
