

APPENDIX 2: KRUGER VIEW LODGE PHOTOGRAPHIC DOCUMENTATION

Fig. 1: The entrance to the study area. Note the power line infrastructure.

Fig. 2: A general view of the study area facing south west towards the Kruger National Park.

Fig. 3: The border fence (south-west), between the study area and the Kruger National Park, facing east.

Fig. 4: A general view of the study area facing north-east towards R536 road (powerline is also visible). The previous cultivated lands are clearly visible.

Fig. 5: Pioneer species such as Sickie bush (*Dichrostachys cinerea*),) has already started to establish itself on the previously disturbed cultivated lands.

Fig. 6: The south-eastern section with the concrete border wall, visible.

Fig. 7: A general view of the south-eastern section.

Fig. 8: Small rocky patches occur, where cultivation could not take place.

Fig. 9: A powerline cuts roughly through the middle of the property and the previous cultivated lands.

Fig. 10: Old pipeline infrastructure which formed part of the water reticulation for the historically cultivated lands (south-eastern section).

Fig. 11: A small drainage line is situated in the northern section (direction is north-east to south-west).

Fig. 12: Dumping of waste, is currently occurring on the site.
