PRETORIA NEWS

MUCKLENEUK - SUBURB ON THE HILL

When the Pretoria pioneer, George Walker, acquired a portion of the farm Elandspoort, he named it after his family estate in Scotland - Muckleneuk, Scots for "corner of the hill". More than a century after the first residents recognised the charm of this hamlet, Muckleneuk Hill is still one of the most sought-after suburbs in Pretoria.

Muckleneuk Hill is bounded by a hill and nature reserve to the South, a highway off ramp to the West, Queen Wilhelmina Street in the East and the railway line in the North. The area has a panoramic view of the city bowl, the Union Buildings, Meintjes Kop, the University of Pretoria and further east. It is a suburb easily accessible, yet secluded.

The area is rich in history. With the discovery of gold on the Witwatersrand in 1886 and the consequent boost to the Zuid-Afrikaansche Republiek's economy, the suburbs Sunnyside, Muckleneuk and Arcadia were laid out before the turn of the 19th century. Wealthy residents in Pretoria saw the charm of the natural hills in Muckleneuk Hill and established their estates accordingly.

In 1895 President Kruger inaugurated the famous Delagoa Bay railway line that linked Pretoria to that port and which runs to the North of Muckleneuk Hill. The line also served to bring people more intimately together. In fact, up to the time when the level of the railway line was dropped between 1947 and 1950, Muckleneuk residents used to party next to the trains on a New Year's Eve.

After the Treaty of Vereeniging in 1902, anoth-

er period of growth began in the history of Muckleneuk with the building of the Zuid-Afrikaanse Hospital with the funding acquired in Holland by the Boer generals Louis Botha, Christiaan de Wet and Koos de la Rey. Soon after, in 1911, Muckleneuk was declared a township and in 1920 Berea Street was tarred!

A striking feature of Muckleneuk Hill is the abundance of historical dwellings. Among these are homes built by renowned architects such as Herbert Baker, Gerhard Moerdyk, Lockwood Hall, De Zwaan and Burg. Homes such as the Kirkness House and Bourke House reflect the classic style of a bygone era. Bourke House was long the residence of Unisa principals and the Kirkness House was built with the famous red bricks, which Kirkness himself boasted were rejects from his brick factory. Today it is the residence of the Korean Ambassador.

Muckleneuk Hill's unique character reflects the various eras of development from the turn of the previous century to the present time periods of opulence and restraint, such as during the Depression, may be seen in the spectrum of dwellings. Because of the secluded nature of the suburb and its accessibility to shopping malls, centres of learning and the highway, Muckleneuk Hill has attracted a rich mix of people. Among others academics, researchers, professional persons and diplomats as well as several embassies such as those of Belgium, Finland and Egypt.

This is a suburb that is not regarded as a stepping stone. Once people have bought into Muckleneuk Hill they stay there for life.

Information supplied by: Muckleneuk Property Owners and Residents Association.

APPENDIX F

Archaeological Assessment

15. ARCHAEOLOGICAL STUDY

15.1 Introduction

In accordance with environmental and heritage legislation, an archaeological survey was undertaken for the Gautrain project to examine the surface sections of the proposed route alignments for sites of archaeological interest. Archaeological Resources Management (ARM) of the University of the Witwatersrand was appointed to undertake this work.

15.2 Methodology

The proposed route alignments were examined using 1: 10 000 orthophotos and 1: 20 000 street maps. Undeveloped areas where the rail corridor ran on the surface were identified and site inspections undertaken to establish whether archaeological remains might be impacted by the proposed Gautrain project. Identified sites of interest were recorded with a hand-held GPS instrument and transferred to the 1: 50 000 maps 2628 AA Johannesburg and 2528 CC Centurion.

The significance of archaeological sites was based on five main criteria: site integrity (i.e. primary vs. secondary context), amount of deposit, range of features (e.g., middens, hearths and houses), uniqueness and potential to answer present research questions. Sites with no significance do not require mitigation, those with low to medium significance may require further work before development, sites with high significance must be mitigated, while sites with maximum significance should not be disturbed at all.

15.3 Results

Generally, the alternative Gautrain route alignments cross over basement granite, and eroded quartz covers most of the Johannesburg sections. Blackreef quartzites protrude above ground in Centurion. Most surface sections everywhere have been disturbed by grading, ploughing or landfill activities. The underlying geology is not significant from a paleontological aspect, with little likelihood of uncovering unusual fossils.

Midrand Station

No sites were noted in this area.

• Brakfontein and Centurion

No sites were noted in this area.

Centurion Military Area

One Middle Stone Age flake was found in a sand quarry near the reference design maintenance area.

Significance

The isolated flake has no significance.

Salvokop

No sites were noted in this area, but this should be checked once the final alignment has been selected because of the planned Freedom Park development and the importance of heritage attached to this proposed project.

15.4 Recommendations

As part of the historic Modderfontein precinct, the Brickfields dump and Amsterdam Street have high significance, and therefore require mitigation. At least one building on Amsterdam Street will be affected, regardless of the route chosen, and serious consideration should be given to its recording, relocation or removal. Some excavations may also be necessary. Refer to Chapter 14: 'Heritage Survey' in the EIA report for more detail in this regard. Once the rail alignment has been chosen, and pegged, archaeologists need to excavate the dump. The dry winter season is the most appropriate time for the excavations.

Elsewhere the Middle Stone Age site requires minimum mitigation-recording of the site and a brief surface collection will suffice. If the abandoned African housing above the Modderfonteinspruit will be destroyed, then it too requires some further work. In this case it will be necessary to compile a map showing the individual households and their spatial relationships to each other.

As the survey indicates, there are no archaeological grounds for choosing between any alternative route alignment. Other than the historic area at Modderfontein, no alternative alignment will negatively impact a significant archaeological site. When the precise alignment has been determined and surveyed, however, it will be necessary to examine the Modderfonteinspruit Valley approach to Midrand, in case any site recordings must be undertaken, and the Salvokop area because of its designation for the Freedom Park Project. Thus, although the Modderfontein sites require serious attention, there are no archaeological reasons why the Gautrain project should not proceed.
