INTRODUCTION

Umlando cc was contracted by Exigent Environmental cc, to undertake a heritage survey of a proposed doubling of the North Central Arterial, Richards Bay, KwaZulu-Natal.

The area is located east of the Richards Bay CBD and consists of upgrading and widening of the existing road by 20m (fig. 1). The area is mostly part of an existing road reserve and has been heavily disturbed by previous infrastructures such as roads, water drainage and electricity lines. A few small areas of open land do exist, and these appear to be old afforested areas.

RESULTS & CONCLUSION

No heritage sites were recorded during the course of the survey. No further management is required for this development.
