umlando@gmail.com

EXECUTIVE SUMMARY

Construction of 12 new chicken broiler houses with dimensions of 15m x 120m, each housing 50 000 chickens. All of the broilers will be on the remaining extent of portion 13 of the farm Wagenbeetjies Draai 875 FT. The site will have 12 houses adjacent to each other, with dimensions of 15m x 120m, each housing 50 000 chickens.

The desktop heritage survey noted that much of the area has been disturbed either by agricultural fields and/or field clearance. No structures were visible on the historical maps.

The heritage survey noted that there are several Early and Middle Stone Age stone tools occur in the study area. These are of low significance and no further mitigation is required.

A stone cairn, that resembles a grave, was noted in the southern part of the study area. While it is unlikely to be a human grave, it currently falls within the definition of a human grave and needs to be treated as such. This cairn will need to be buffered.

The PIA study noted that it was unlikely for any significant fossils to occur within the study area. No further mitigation is required, but a Chance Find protocol should be initiated.

INTRODUCTION

Construction of 12 new chicken broiler houses with dimensions of 15m x 120m, each housing 50 000 chickens. All the houses/broilers will be on remaining extent of portion 13 of the farm Wagenbeetjies Draai 875 FT. Coordinates of the application areas: S 29° 28′ 42″, E 30° 29′ 24″ and a surface area of 8 ha.

Exigent Engineering Consultants cc has been appointed by Nyala Farm CC as the Environmental Assessment Practitioner to undertake the Basic Assessment process, including the Public Participation Process.

The site will have 12 houses adjacent to each other, with dimensions of 15m x 120m, each housing 50 000 chickens. The houses will be constructed with concrete, with a steel structure with sink roof. Each house will have its own woodchip heating system. The houses will be fenced off as a unit.

Umlando was requested to undertake an HIA of the proposed irrigation developments. Figures 1 – 4 show the location of the development.

KWAZULU NATAL AMAFA AND RESEARCH INSTITUTE, ACT 05, 2018

"General protection: Structures.—

- No structure which is, or which may reasonably be expected to be older than 60 years, may be demolished, altered or added to without the prior written approval of the Council having been obtained on written application to the Council.
- Where the Council does not grant approval, the Council must consider special protection in terms of sections 38, 39, 40, 41 and 43 of Chapter 9.
- The Council may, by notice in the Gazette, exempt—
- A defined geographical area; or
- defined categories of sites within a defined geographical area, from the provisions of subsection where the Council is satisfied that heritage resources falling in the defined geographical area or category have been identified and are adequately protected in terms of sections 38, 39, 40, 41 and 43 of Chapter 9.
- A notice referred to in subsection (2) may, by notice in the *Gazette*, be amended or withdrawn by the Council.

General protection: Graves of victims of conflict.—No person may damage, alter, exhume, or remove from its original position—

- the grave of a victim of conflict;
- a cemetery made up of such graves; or
- any part of a cemetery containing such graves, without the prior written approval of the Council having been obtained on written application to the Council.
- General protection: Traditional burial places.—
- No grave—
- not otherwise protected by this Act; and
- not located in a formal cemetery managed or administered by a local authority, may be damaged, altered, exhumed, removed from its original

position, or otherwise disturbed without the prior written approval of the Council having been obtained on written application to the Council.

The Council may only issue written approval once the Council is satisfied that—

- the applicant has made a concerted effort to consult with communities and individuals who by tradition may have an interest in the grave; and
- the applicant and the relevant communities or individuals have reached agreement regarding the grave.

General protection: Battlefield sites, archaeological sites, rock art sites, palaeontological sites, historic fortifications, meteorite or meteorite impact sites.—

- No person may destroy, damage, excavate, alter, write or draw upon, or otherwise disturb any battlefield site, archaeological site, rock art site, palaeontological site, historic fortification, meteorite or meteorite impact site without the prior written approval of the Council having been obtained on written application to the Council.
- Upon discovery of archaeological or palaeontological material or a
 meteorite by any person, all activity or operations in the general vicinity of
 such material or meteorite must cease forthwith and a person who made
 the discovery must submit a written report to the Council without delay.
- The Council may, after consultation with an owner or controlling authority, by way of written notice served on the owner or controlling authority, prohibit any activity considered by the Council to be inappropriate within 50 metres of a rock art site.
- No person may exhume, remove from its original position or otherwise disturb, damage, destroy, own or collect any object or material associated with any battlefield site, archaeological site, rock art site, palaeontological site, historic fortification, meteorite or meteorite impact site without the prior written approval of the Council having been obtained on written application to the Council.
- No person may bring any equipment which assists in the detection of metals and archaeological and palaeontological objects and material, or

excavation equipment onto any battlefield site, archaeological site, rock art site, palaeontological site, historic fortification, or meteorite impact site, or use similar detection or excavation equipment for the recovery of meteorites, without the prior written approval of the Council having been obtained on written application to the Council.

 The ownership of any object or material associated with any battlefield site, archaeological site, rock art site, palaeontological site, historic fortification, meteorite or meteorite impact site, on discovery, vest in the Provincial Government and the Council is regarded as the custodian on behalf of the Provincial Government."

METHOD

The method for Heritage assessment consists of several steps.

The first step forms part of the desktop assessment. Here we would consult the database that has been collated by Umlando. This databases contains archaeological site locations and basic information from several provinces (information from Umlando surveys and some colleagues), most of the national monuments and battlefields Southern **Africa** provincial in (http://www.vuvuzela.com/googleearth/monuments.html) and cemeteries southern Africa (information supplied by the Genealogical Society of Southern Africa). We use 1st and 2nd edition 1:50 000 topographical and 1937 aerial photographs where available, to assist in general location and dating of buildings and/or graves. The database is in Google Earth format and thus used as a quick reference when undertaking desktop studies. Where required we would consult with a local data recording centre, however these tend to be fragmented between different institutions and areas and thus difficult to access at times. We also consult with an historical architect, palaeontologist, and an historian where necessary.

The survey results will define the significance of each recorded site, as well as a management plan.

All sites are grouped according to low, medium, and high significance for the purpose of this report. Sites of low significance have no diagnostic artefacts or features. Sites of medium significance have diagnostic artefacts or features and these sites tend to be sampled. Sampling includes the collection of artefacts for future analysis. All diagnostic pottery, such as rims, lips, and decorated sherds are sampled, while bone, stone, and shell are mostly noted. Sampling usually occurs on most sites. Sites of high significance are excavated and/or extensively sampled. Those sites that are extensively sampled have high research potential, yet poor preservation of features.

Defining significance

Heritage sites vary according to significance and several different criteria relate to each type of site. However, there are several criteria that allow for a general significance rating of archaeological sites.

These criteria are:

1. State of preservation of:

- 1.1. Organic remains:
- 1.1.1. Faunal
- 1.1.2. Botanical
- 1.2. Rock art
- 1.3. Walling
- 1.4. Presence of a cultural deposit
- 1.5. Features:
- 1.5.1. Ash Features
- 1.5.2. Graves

Umlando Nyala Broilers HIA rev 2 07/10/2022

- 1.5.3. Middens
- 1.5.4. Cattle byres
- 1.5.5. Bedding and ash complexes

2. Spatial arrangements:

- 2.1. Internal housing arrangements
- 2.2. Intra-site settlement patterns
- 2.3. Inter-site settlement patterns

3. Features of the site:

- 3.1. Are there any unusual, unique or rare artefacts or images at the site?
 - 3.2. Is it a type site?
- 3.3. Does the site have a very good example of a specific time period, feature, or artefact?

4. Research:

- 4.1. Providing information on current research projects
- 4.2. Salvaging information for potential future research projects

5. Inter- and intra-site variability

- 5.1. Can this particular site yield information regarding intra-site variability, i.e. spatial relationships between various features and artefacts?
- 5.2. Can this particular site yield information about a community's social relationships within itself, or between other communities?

6. Archaeological Experience:

6.1. The personal experience and expertise of the CRM practitioner should not be ignored. Experience can indicate sites that have potentially significant aspects, but need to be tested prior to any conclusions.

7. Educational:

- 7.1. Does the site have the potential to be used as an educational instrument?
 - 7.2. Does the site have the potential to become a tourist attraction?
- 7.3. The educational value of a site can only be fully determined after initial test-pit excavations and/or full excavations.

8. Other Heritage Significance:

- 8.1. Palaeontological sites
- 8.2. Historical buildings
- 8.3. Battlefields and general Anglo-Zulu and Anglo-Boer sites
- 8.4. Graves and/or community cemeteries
- 8.5. Living Heritage Sites
- 8.6. Cultural Landscapes, that includes old trees, hills, mountains, rivers, etc related to cultural or historical experiences.

The more a site can fulfill the above criteria, the more significant it becomes. Test-pit excavations are used to test the full potential of an archaeological deposit. This occurs in Phase 2. These test-pit excavations may require further excavations if the site is of significance (Phase 3). Sites may also be mapped and/or have artefacts sampled as a form of mitigation. Sampling normally occurs when the artefacts may be good examples of their type, but are not in a primary archaeological context. Mapping records the spatial relationship between features and artefacts. Table 1 lists the grading system.

TABLE 1: SAHRA GRADINGS FOR HERITAGE SITES

SITE SIGNIFICANCE	FIELD RATING	GRADE	RECOMMENDED MITIGATION
High	National	Grade 1	
Significance	Significance		development
High	Provincial	Grade 2	Site conservation / Site
Significance	Significance		development
High	Local	Grade	3A /
Significance	Significance	3B	
High / Medium	Generally		Site conservation or mitigation
Significance	Protected A		prior to development / destruction
Medium	Generally		Site conservation or mitigation /
Significance	Protected B		test excavation / systematic sampling / monitoring prior to or during development / destruction
Low Significance	Generally Protected C		On-site sampling monitoring or no archaeological mitigation required prior to or during development / destruction

RESULTS

DESKTOP STUDY

The desktop study consisted of analysing various maps for evidence of prior habitation in the study area, as well as for previous archaeological surveys. Few archaeological sites occur in the general area. This will be a result of a lack of surveys, rather than an indication of the amount of sites. The archaeological sites in the general area include Early Stone Age, Early Iron Age, and Late Iron Age sites. Some historical buildings do occur in the general area (fig. 5).

The original farm, Wagenbeetjes Draai 875 was first surveyed in 1848 and sold shortly thereafter (fig. 6). The farm was later subdivided where the study area is now on Lindlea 13970. This suggests that some buildings in the general could date to at least 1848.

The 193, 1963, 1970 and 1989 aerial photographs indicate that the area was been partially cultivated on the upper part of the hill (fig.'s 8 - 11). The 1963 topographical map suggests that part f the slope was also under cultivation (fig. 9).

No visible structures are noted in any of these maps and photographs.

FIG. 5: LOCATION OF KNOWN HERITAGE SITES IN THE GENERAL AREA

FIG. 6: ORIGINAL FARM WAGENBEETJES DRAAI 875 (1848)

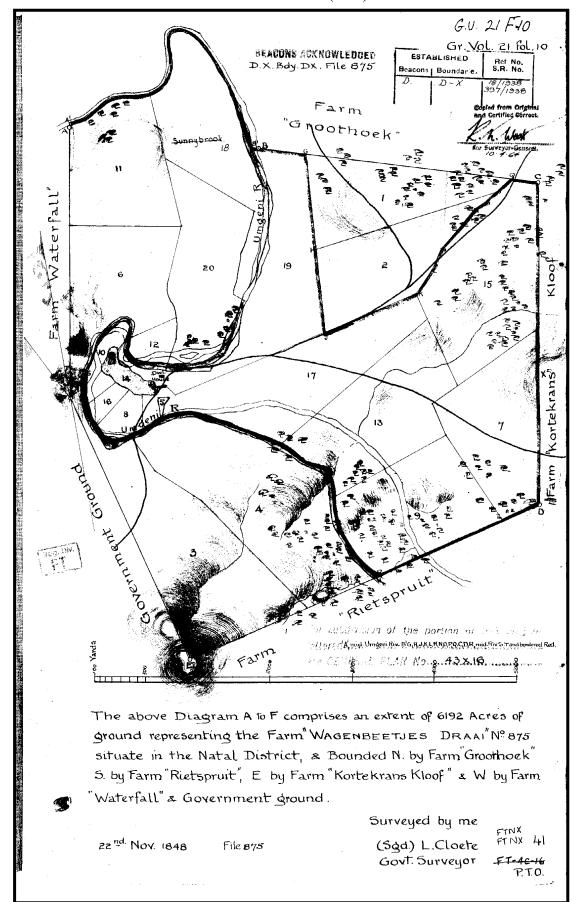

FIG. 7: FARM LIDLEA 13790 INCLUDING FREELANDS (1947)

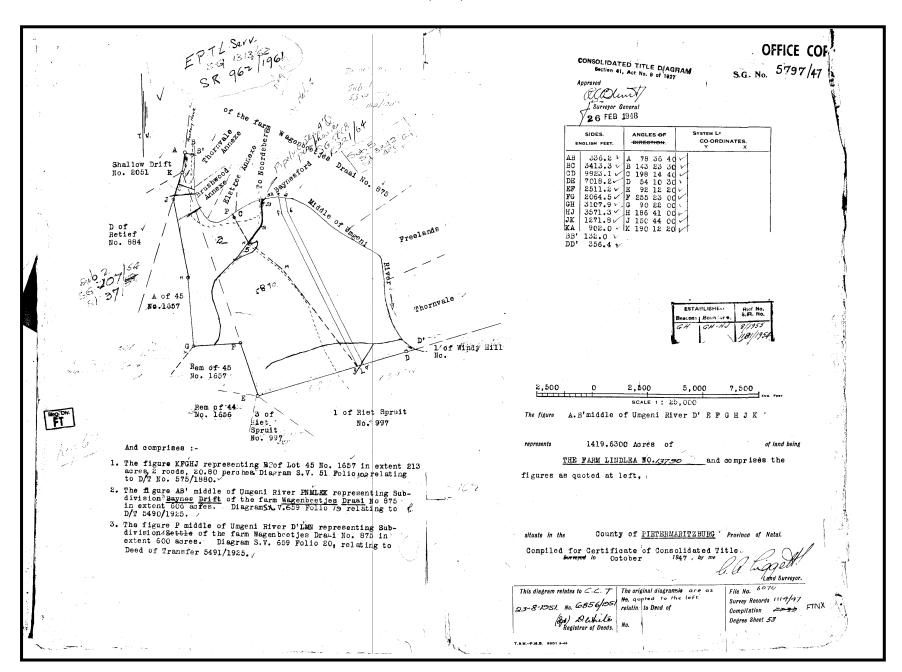

FIG.8: LOCATION OF THE STUDY AREA IN 1937

FIG. 9: LOCATION OF THE STUDY AREA IN 1963

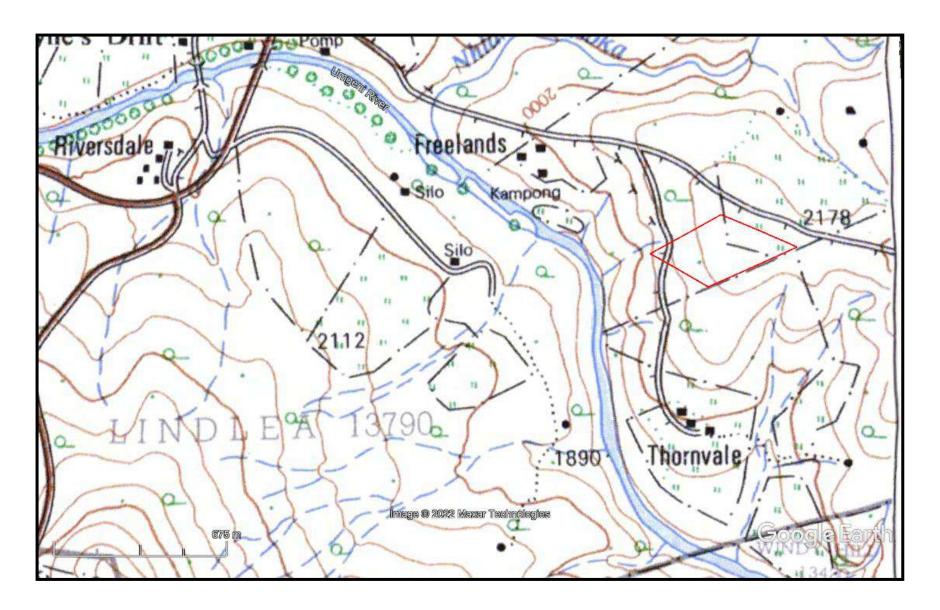

FIG. 10: LOCATION OF THE STUDY AREA IN 1970

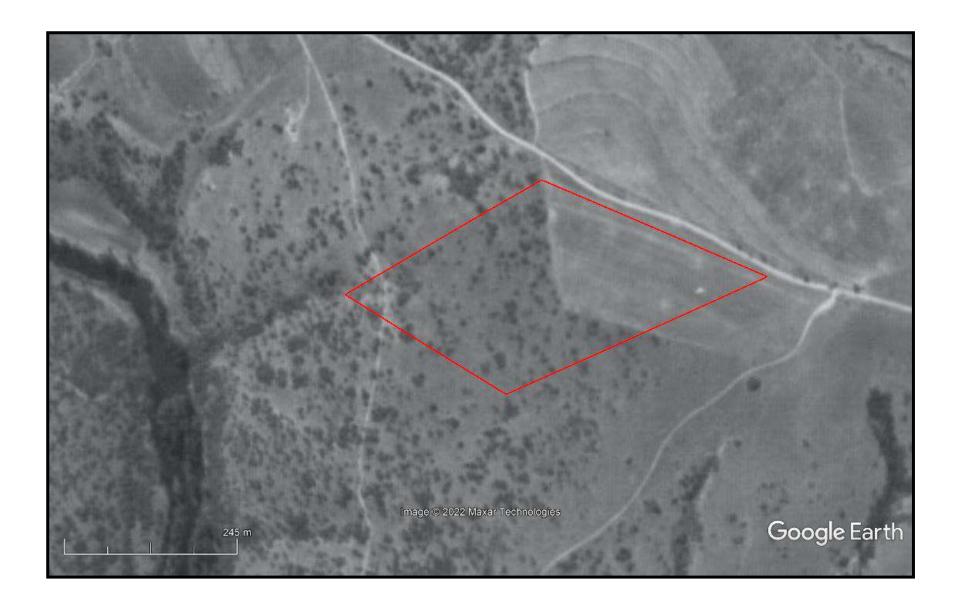

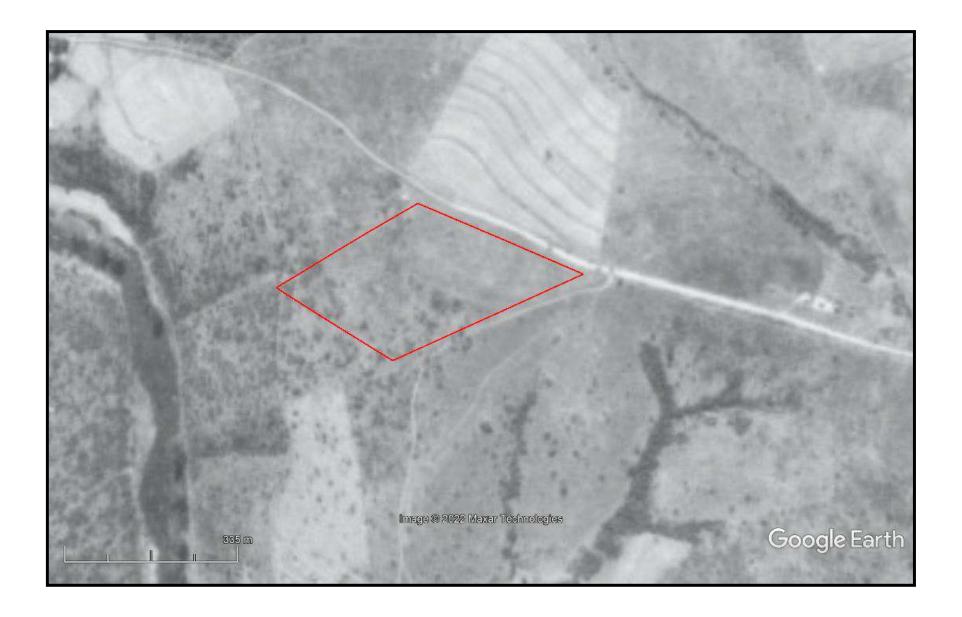

FIG. 11: LOCATION OF THE STUDY AREA IN 1989

PALAEONTOLOGICAL SENSITIVITY

The area is in an area of medium palaeontological sensitivity (fig. 12). Dr. Alan Smith undertook a brief analyses of the area and suggested a letter of exemption will suffice. He states that the underlying rock is Dyka Group. Trace fossils may be found but these are not significant. No significant palaeontological finds have been made in this lithology (Appendix A).

No further PIA mitigation is required.

FIG. 7: PALAEONTOLOGICAL SENSITIVITY MAP

COLOUR	SENSITIVITY	REQUIRED ACTION
RED	VERY HIGH	field assessment and protocol for finds is required
ORANGE/YELLOW	HIGH	desktop study is required and based on the outcome of the desktop study, a field assessment is likely
GREEN	MODERATE	desktop study is required
BLUE	LOW	no palaeontological studies are required however a protocol for finds is required
GREY	INSIGNIFICANT/ZERO	no palaeontological studies are required
WHITE/CLEAR	UNKNOWN	these areas will require a minimum of a desktop study. As more information comes to light, SAHRA will continue to populate the map.

FIELD SURVEY

A field survey was undertaken on the 18 May 2022. Much of the area was covered in long grass; however, there were enough tracks and cleared areas to make a satisfactory survey.

There has been systematic field clearance on most of the property up to the current line of thornbush trees. This is seen by the piles of boulders on the edges of the property.

The upper part of the site has several Early Stone Age and Middle Stone Age stone tools (fig. 13). These are in a secondary context and have been disturbed by previous ploughing and natural post depositional movement. The tools are of low significance and form part of the general scatter of stone tools in the area. The tools do not form an archaeological site and should be noted as an occurrence of stone tools

Within the thornbush area is a stone cairn (29°28'47.13"S 30°29'27.97"E) that is next to an interlinking track (fig. 14) The cairn is approximately 1.2m x 2m in size and consists of packed rocks and sand infill. It is in a north-south orientation. While the cairn is probably not a grave, it needs to be treated as such until proven otherwise as it fits the criteria for a grave. The area should have a demarcated buffer 5m from it, and a non-development buffer of 20m. The slope of the cairn follows the slope of the hill, and is thus not a base for a water tank or similar object.

The location of the stones tools and cairn are shown in fig. 15.

FIG. 13: STONE TOOLS WITHIN THE STUDY AREA

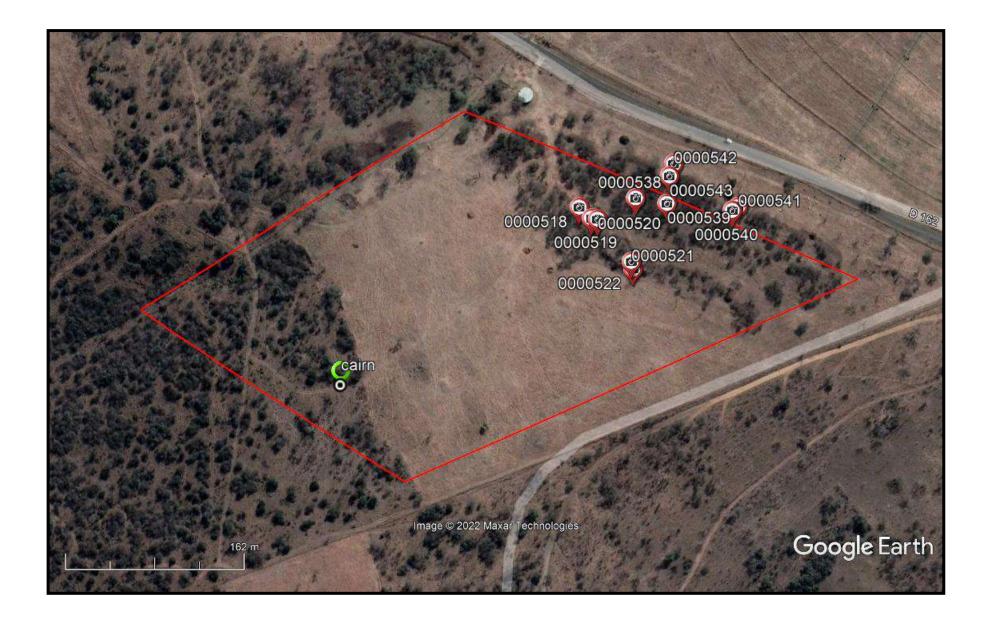

FIG. 14: STONE CAIRN

FIG. 15: LOCATION OF STONES TOOLS AND STONE CAIRN

RECOMMENDATIONS

The proposed chicken broilers will probably not affect the cairn as it is on a slope, unless the slopes are levelled. The cairn should be treated as a grave until proven otherwise. If any development occurs within 50m of the cairn then it needs to be clearly demarcated. The demarcation should be 5m from the edge of the cairn and can be in the form of fencing. An additional 20m buffer of no development needs to be placed around the cairn. Proof of the demarcation needs to be recorded.

An alternative to the buffer around the cairn would be to test excavate. Since this is probably not a grave, some leeway should be given. The test excavations will entail the following:

- Agreement from KZNARI to test the area is obtianed
- The grass is cut around the cairn before I come to site
- The rocks are removed to determine if this is a grave or a pile of rocks.
 This will be very easy to determine since a grave will continue beneath the current ground level, whereas the rock pile will be on the surface.
- If there is any indication that this could be a grave, then all work stops immediately, the rocks are replaced in the same manner they were removed, and the area is buffered.
- If everything indicates that it is a "pile of rocks" then the area is given the go-ahead and work can continue.
- All of this will need to be photographically documented.
- A report of the findings will be submitted to KZNARI

CONCLUSION

A Heritage survey was undertaken for the proposed Nyala Farm cc chicken broilers. Twelve chicken broilers will be built within the study area. The heritage survey noted that there are several Early and Middle Stone Age stone tools occur

in the study area. These are of low significance and no further mitigation is required.

A stone cairn that resembles a grave was noted in the southern part of the study area. While it is unlikely to be a human grave, it currently falls within the definition of a human grave and needs to be treated as such. This cairn will need to be buffered. The alternative is that a test excavation is undertaken to determine if it is a grave or "a pile of rocks".

EXPERIENCE OF THE HERITAGE CONSULTANT

Gavin Anderson has a M. Phil (in archaeology and social psychology) degree from the University of Cape Town. Gavin has been working as a professional archaeologist and heritage impact assessor since 1995. He joined the Association of Professional Archaeologists of Southern Africa in 1998 when it was formed. Gavin is rated as a Principle Investigator with expertise status in Rock Art, Stone Age and Iron Age studies. In addition to this, he was worked on both West and East Coast shell middens, Anglo-Boer War sites, and Historical Period sites.

DECLARATION OF INDEPENDENCE

I, Gavin Anderson, declare that I am an independent specialist consultant and have no financial, personal or other interest in the proposed development, nor the developers or any of their subsidiaries, apart from fair remuneration for work performed in the delivery of heritage assessment services. There are no circumstances that compromise the objectivity of my performing such work.

Gavin Anderson

Archaeologist/Heritage Impact Assessor

Letter of Exemption from Palaeontological Impact Assessment for:

NYALA DEVELOPMENT NEAR ALBERT FALLS UMSHWATHI LOCAL MUNICIPALITY, EASTERN CAPE.

Dear Sir

Dr Alan Smith was asked by UMLANDO: Archaeological Surveys & Heritage Management to conduct a PIA for the above named project.

The proposed development will take place in rocks colour coded green in the SAHRIS Map. This site is about 250 X 370 m, but will have shallow foundations and to be constructed on agricultural land which is already disturbed. The underlying rock is Dyka

Group. Trace fossils may be found but these are not significant. No significant palaeontological finds have been made in this lithology.

Consequently there is no reason to conduct a PIA for this project. Exemption from Palaeontological Impact Assessment (PIA) is requested for this project. However a "Chance Find Protocol" is attached to cover any chance find.

Should any of the proposed plans change then the project will need to be reassessed in terms of a PIA

Dr Alan Smith. Alan Smith Consulting 25 May, 2022

get 2

CHANCE FIND PROTOCOL

This Chance Find Protocol must be included in the site EMPr.

If any fossils are found, a Palaeontologist must be notified immediately by the ECO and/or EAP and a site visit must be arranged at the earliest possible time with the Palaeontologist.

In the case of the ECO or the Site Manager becoming aware of suspicious looking palaeo-material:

- > The construction must be halted in that specific area and the Palaeontologist must be given enough time to reach the site and remove the material before excavation continues.
- ➤ Mitigation will involve the attempt to capture all rare fossils and systematic collection of all fossils discovered. This will take place in conjunction with descriptive, diagrammatic and photographic recording of exposures, also involving sediment samples and samples of both representative and unusual sedimentary or biogenic features. The fossils and contextual samples will be processed (sorted, sub-sampled, labeled, and boxed) and documentation consolidated, to create an archive collection from the excavated sites for future researchers.

Functional responsibilities of the Developer

- 1. At full cost to the project, and guided by the appointed Palaeontological Specialist, ensure that a representative archive of palaeontological samples and other records is assembled to characterize the palaeontological occurrences affected by the excavation operation.
- 2. Provide field aid, if necessary, in the supply of materials, labour and machinery to excavate, load and transport sampled material from the excavation areas to the sorting areas, removal of overburden if necessary, and the return of discarded material to the disposal areas.
- 3. Facilitate systematic recording of the stratigraphic and palaeo-environmental features in exposures in the fossil-bearing excavations, by described and measured geological sections, and by providing aid in the surveying of positions where significant fossils are found.

- 4. Provide safe storage for fossil material found routinely during excavation operations by construction personnel. In this context, isolated fossil finds in disturbed material qualify as "normal" fossil finds.
- 5. Provide covered, dry storage for samples and facilities for a work area for sorting, labeling and boxing/bagging samples.
- 6. Costs of basic curation and storage until collected. Documentary record of palaeontological occurrences must be done.
- 7. The contractor will, in collaboration with the Palaeontologist, make the excavation plan available to the appointed specialist, in which appropriate information regarding plans for excavations and work schedules must be indicated on the plan of the excavation sites. This must be done in conjunction with the appointed specialist.
- 8. Initially, all known specific palaeontological information will be indicated on the plan. This will be updated throughout the excavation period.
- 9. Locations of samples and measured sections are to be pegged, and routinely and accurately surveyed. Sample locations, measured sections, etc., must be recorded three-dimensionally if any "significant fossils" are recorded during the time of excavation.

DETAILS OF SPECIALIST

Dr Alan Smith

<u>Private Consultant</u>: Alan Smith Consulting, 29 Brown's Grove, Sherwood, Durban, 4091

&

<u>Honorary Research Fellow</u>: Discipline of Geology, School of Agriculture, Earth and Environmental Sciences, University of KwaZulu-Natal, Durban.

Role: Specialist Palaeontological Report production

Expertise of the specialist:

- o PhD in Geology (University of KwaZulu-Natal), Pr. Sc. Nat., I.A.H.S.
- Expert in Vryheid Formation (Ecca Group) in northern KZN, this having been the subject of PhD.
- Scientific Research experience includes: Fluvial geomorphology, palaeoflood hydrology, Cretaceous deposits.
- Experience includes understanding Earth Surface Processes in both fluvial and coastal environments (modern & ancient).
- Alan has published in both national and international, peer-reviewed journals. He has published + 50 journal articles with 497 citations (detailed CV available on request).
- Attended and presented scientific papers and posters at numerous international and local conferences (UK, Canada, South Africa) and is actively involved in research.

Selected recent palaeo-related work includes:

- Desktop PIA: Proposed middle income housing units on Portion 23 of Farm Lot H
 Weston 13026, Bruntville, Mpofana Local Municipality. Client: UMLANDO.
- Desktop PIA: Proposed ByPass Pipeline for Ulundi bulk water pipeline upgrade.
 Client: UMLANDO.
- Fieldwork PIA: Bhekuzulu Epangweni KZN water reticulation project, Cathkin Park. Client: Mike Webster, HSG Attorneys.
- o Fieldwork PIA: Mpungoze water supply scheme, Empangeni. Client: Enviropro.
- o Fieldwork PIA: Helpmekaar Dam. Client: Afzelia environmental consultants.
- o Desktop PIA: Zuka valley, Ballito. Client: Mike Webster, HSG Attorneys.
- o Mevamhlope proposed quarry palaeontology report. Client: Enviropro.

- Desktop PIA: Proposed Lovu Desalination site. Client: eThembeni Cultural Heritage.
- Desktop PIA: Tinley Manor phase 2 North & South banks: eThembeni Cultural Heritage
- O Desktop PIA: Tongaat. Client: eThembeni Cultural Heritage.
- Palaeontological Assessment Reports (3) to Scatec Solar SA (Pty) Ltd on an Appraisal of Inferred Palaeontological Sensitivity for a Potential Photo Voltaic Park at (1) Farm Rooilyf near Groblershoop, N Cape; (2) Farm Riet Fountain No. Portions 1 and 6, 18km SE of De Aar, N Cape; and (3) Dreunberg, near Burgersdorp, Eastern Cape. Client: Sustainable Development Projects.
