

RDR 7: See layout plan Fig. 6. This entire complex was very indistinct before the velt was burnt. The stone walls are all level with the ground surface. All the units formed part of a bigger complex, but are individually discussed. The area is largely disturbed which make a clear layout plan of the complex impossible.

Photo 1 & 2: Photos facing west. The site has already been impacted upon by a dirt road. The rock engraving, RDR 8 is to the south of the dirt road. The deteriorated stone walls of RDR 7 (2, in foreground) and RDR 7 (1) in background are visible after the area was burnt.

Photo 3: The rock engraving site is situated at the rocky outcrop in front of the big tree.

RDR 7 Unit 1:

Photo 4: RDR 7 (1) Facing east: This site has already been impacted upon by a dirt road. A recent beacon is visible in the stone walls, which was used as a marker. The potsherds (Fig. 7) were found in the disturbed section towards the left. Indistinct walls are visible which form part of a circular unit.

Photo 5: A large stone which might have been used in the entrance of the unit (see Fig. 4).

Photo 6: Unit 1 with the disturbed road in the foreground. Unit 2 is visible towards the middle left.

Photo 7: Potsherds associated with unit 1, which were discovered in the disturbed road section. The potsherd has a single line and graphite decoration.

RDR 7 Unit 2: An outer wall surrounds Unit 2 and connects with Unit 1.

Photo 8: The circular walls of RDR 7 (2) are visible. The arrows indicate the upright stones (left) which indicate the entrance at the outer wall. Two prominent large stones also form part of the outer wall (arrow to right).

Photo 9 & 10: The two photos (Unit 2) overlap at the arrows. The upright stones are visible to the left with the prominent large stones visible at the arrows. The deteriorated walls are visible after the velt was burnt.

Photo 11: Close-up of the 2 upright stones which indicate the entrance of Unit 2. The stone on the left is rubbed smoothly at the top.

Photo 12: The two large stones which are incorporated as part of the outer wall which is visible at the arrows.

Photo 13: An upper grinder which was found on the deteriorated stone wall of Unit 2.

Photo 14: Another upper grinder which was found at Unit 2.

RDR 7 Unit 3

Photo 15: Unit 3 has already been impacted upon by a dirt road. The outer wall of the unit is visible in the foreground (arrow) and the inner walls are visible in the middle section.

Photo 16: Two prominent stones form an entrance to unit 3. There are two distinct flat stones indicated by the arrow in the entrance (see detail in Fig. 17).

Photo 17: The two prominent flat stones as described in Fig. 16.

Photo 18: A few upper grinders and clay potsherds without decoration which were found in the disturbed section of the road in Unit 3.

RDR 7 Unit 4

Photo 19 & 20: Unit 4 is to the extreme east of RDR 7. The two photos overlap at the prominent upright stone entrance (indicated with arrows). The extent of the unit is visible.

Photo 21: The inner circle of Unit 4. A stone wall extended to the left (south) with a prominent upright stone visible (indicated by the arrow). A few upper grinders were observed in this unit.

Photo 22: An upper grinder found at Unit 4.
