Dear Ms Higgett

**RE: CaseID: 12843 - Final Comment Palaeontological Impact Assessment for three
proposed PV projects near Lichtenburg, Northwest Province
Site visit Report by Marion Bamford**

This is to confirm that we did NOT collect any stromatolites from the sites (Farm Zamenkomst) as indicated in the report, and corrected now. My colleague who did the site visit, Frederick Tolchard (MSc candidate), asked me if he should collect material and I assured him that it was not necessary. We do not have a permit and stromatolites are of minimal interest palaeontologically because they are trace fossils and only very rarely are the micro-organisms preserved. Furthermore, we do not have any agreement with any institute to house and curate stromatolites,

I apologise for poor editing of the report and request that you accept the revised report hereby attached.

Yours sincerely

Prof Marion Bamford (PhD, Wits)
Director: ESI
