Summary

I am currently the Environmental Compliance and Assessment Manager for CIGroup Environmental (Pty) Ltd (CIGroup). I have 19 years of experience within the field of integrated environmental management and various integrated environmental authorisation processes, specifically in the mining sector. As an Environmental Assessment Practitioner I have been involved in the environmental authorisation/permitting of new projects or extensions to existing operations, as well as environmental compliance activities on existing sites. I have successfully executed permitting processes resulting in the issuance/renewal/amendment of mining rights, prospecting rights, and environmental authorisations.

To successfully develop a project requires understanding the needs and requirements of each project so that guidance on the best approach to development and implementation is provided. Understanding the bigger picture of project development and implementation is essential in ensuring that all development aspects, including permitting, are initiated at the correct time to adhere to project planning. Ideally, environmental aspects must be considered during the project planning stage, as there are often small adjustments in planning design that may reduce the environmental authorisation required. This must be supported by industry best practise and regulatory developments, ensuring that permitting is incorporated in all phases of a project lifecycle, especially future planning and business strategies.

I am responsible for the appointment and management of multidisciplinary specialist teams to meet project specific requirements. My knowledge of numerous specialist fields, gained through project exposure and experience, ensures that I can accurately determine whether reports meet project requirements and align with industry standards. I utilise my broad knowledge of environmental and social sciences to ensure that reports are scientifically grounded yet practically implementable

Nurturing relationships with internal, external, and regulatory stakeholders is essential to ensuring successful project development. I develop relationships based on honesty, trust, and mutual understanding. Having undertaken numerous external stakeholder and authority consultation processes, I have gained skills which allow me to successfully facilitate meetings with various project stakeholders.
